## Environmental Assessment

### 1. INTRODUCTION

This Environmental Assessment (EA) is intended to fulfill the requirements of the National Environmental Policy Act (NEPA), as set forth in the Code of Federal Regulations (CFR), Chapter 40, Parts 1500-1517, July 2, 1992. This EA conforms to the U.S. Department of Veterans Affairs (USDVA), Office of Facilities Management, *Environmental Compliance Manual* (Manual), updated July 1998 (38 CFR Part 26). The format of this EA was derived from the Manual.

#### 1.1. Project Description

On May 16, 2016, the Texas General Land Office (GLO) and Texas Veterans Land Board (VLB) released a request for proposal (RFP) (No. X0009462-DF) for general construction services for a Texas State Veterans Home in Houston, Texas.

The proposed project would construct a community living center for the Texas Veterans Land Board and Texas General Land Office. The proposed project site is approximately 18.2 acres total. The living center would be approximately 136,000 square feet and built on an approximately 18.2-acre tract. The proposed living center would have 120 units and a staff of 140 to 160 full-time employees.

The State Veterans Home - Houston site is located just within the southern city limit of Houston in Harris County, Texas (**Exhibit 1**). Beltway 8 is located south of the project site. The project site is bound on all sides by undeveloped property (**Exhibit 2**). The site is located on the Pearland, Texas, U.S. Geological Survey (USGS) 7.5-minute quadrangle (**Exhibit 3**). The State Veterans Home - Houston would serve eligible Texas veterans who have served in the United States Armed Forces and who now require skilled nursing care.

The State Veterans Home - Houston has been designed to provide veterans of this area with a suitable living facility and skilled nursing care. The facility would be an approximately 136,000 square foot, single-story building with 120 nursing beds, including a 30-bed memory support unit. The living center will feature four wings, with each wing containing three “small house” concepts (**Exhibit 7**). Each “small house” will accommodate ten residents and include a kitchen, dining room, and living room. The facility will also include an outdoor garden, patio, bistro, library, chapel, and a multi-purpose room.

#### 1.2. Purpose and Need Analysis

The purpose of this project is to construct a community living center on properties own by the State of Texas and provide veterans a suitable living facility with skilled nursing care. As of September 30, 2014, the veteran population in Texas was approximately 1,496,700. Approximately 615,500 of these veterans were age 65 or older (USDVA 2014). As the veteran population ages, the need for veteran living facilities and healthcare will increase. The State Veterans Home - Houston would help meet the housing and healthcare needs of Texas veterans.

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

The Houston area currently lacks a veterans living facility. Texas has eight veterans living facilities, located in Tyler, Bonham, Big Spring, McAllen, Floresville, Temple, Amarillo, and El Paso. The William R. Courtney Texas State Veterans Home in Temple, TX is the veterans living facility nearest to the Houston area; this facility is located approximately 170 miles from Houston.

## 2. ALTERNATIVES

### 2.1. Proposed Action

The proposed project would construct a community living development for the Texas Veterans Land Board. The proposed living center would serve 120 veterans. The approximately 18.2-acre site is located in southern Harris County, within Houston city limits and just north of Beltway 8 (**Exhibit 1**).

### 2.2. No-Action Alternative

Under the no-action alternative, the State Veterans Home - Houston would not be built to serve Texas veterans in the region. Currently, there is no community living center for veterans in the Houston area. Existing veteran living centers are located in Tyler, Bonham, Big Spring, McAllen, Floresville, Temple, Amarillo, and El Paso. Selection of the no-action alternative would place hardship on Houston-area veterans and their families. For these reasons, the no-action alternative is not considered an acceptable alternative to meet the purpose and need of the project.

## 3. ENVIRONMENTAL SETTING

The proposed community living project site occupies approximately 18.2 acres of undeveloped land located north of the intersection of Beltway 8 Frontage Road and Cottingham Road (**Exhibit 2**). The proposed project site is bound by undeveloped land on all sides. Beltway 8 is 0.2 miles south of the project site, and light residential development is present in the vicinity of the project site.

### 3.1. Aesthetics

The term aesthetics refers to the subjective perception of natural beauty in a landscape by attempting to define and measure an area's scenic qualities. Consideration of the visual environment includes a determination of aesthetic values (where the major potential effect of a project on the resource is considered visual) and recreation values (where the location of a project could potentially affect the scenic enjoyment of the area). Aesthetic values considered in this analysis, which combine to give an area its aesthetic identity include:

- Topographical variation (hills, valleys, etc.);

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

- Prominence of water in the landscape;
- Vegetation (forests, pasture, etc.);
- Diversity of scenic elements;
- Degree of human development or alteration; and
- Overall uniqueness of the scenic environment compared with the larger region.

The proposed living center site exhibits a low to moderate level of aesthetic quality. Topography ranges from 50 to 54 feet above mean sea level, indicating minimal variation in relief. Within the project site, the prominence of water in the landscape is limited to rainwater sheeting and ephemeral runoff. The vegetation setting throughout the project site is characterized by dense thickets of native and exotic shrubs, trees, and woody vines. Surrounding properties primarily consist of undeveloped land, agricultural pastures, and light residential development. A spring-fed pond is located immediately north of the project site. The scenic environment is relatively similar to other surrounding environments. Photographs taken during the May 2016 site visit can be found in **Appendix A**.

### 3.2. Air Quality

Harris County is currently classified as marginal nonattainment for ozone (2008 eight-hour standard) under the National Ambient Air Quality Standard (NAAQS). Harris County is designated as attainment/unclassifiable for lead (Pb), carbon monoxide (CO), nitrogen dioxide (NO<sub>2</sub>), particulate matters (PM<sub>10</sub> and PM<sub>2.5</sub>), and sulfur dioxide (SO<sub>2</sub>).

Section 176(c)(1) of the Clean Air Act requires federal agencies to ensure that their actions conform to applicable implementation plans for the achievement and maintenance of the NAAQS for criteria pollutants (DOE 2000). To achieve conformity, a federal action must not contribute to new violations of standards for ambient air quality, increase the frequency or severity of existing violations, or delay timely attainment of standards in the area of concern. The EPA general conformity regulations (40 CFR 93, Subpart B) contain guidance for determining whether a proposed federal action would cause emissions to be above specified levels in nonattainment or maintenance areas.

The proposed project would occur in an area that is in marginal nonattainment for ozone. For an area of “other ozone nonattainment area outside an ozone transport region,” a conformity determination is not required if project emission of nitrogen oxides (NO<sub>x</sub>) and volatile organic compounds (VOCs), which are ozone precursors, are less than 100 tons per year. Emissions associated with the proposed project would be limited to fugitive dust and equipment exhaust from construction and landscaping. Internal combustion engines using either gasoline or diesel fuel emit NO<sub>x</sub> or VOCs, but the limited duration and size of the project would result in relatively minor quantities of these air pollutants. For example, according to EPA emission factors (AP-42

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

– Compilation of Air Pollutant Emission Factors) for internal combustion engines, a piece of equipment with a moderately large 300 horsepower (HP) gasoline engine could run for 8 hours a day for a full year and would emit approximately 4.8 tons of NO<sub>x</sub> and no more than 9.5 tons of VOCs. In the case of a 300 HP diesel engine under the same conditions, emissions of NO<sub>x</sub> would be approximately 13.6 tons and VOCs emissions would be no more than 1.1 tons. The proposed project would be expected to involve more than a single piece of equipment, however the construction period would be a matter of several weeks, and it is unlikely the equipment would run for 8 hours a day during the short construction period. It is clear the proposed project would not involve either NO<sub>x</sub> or VOC emissions that approach the 100 ton threshold and, as a result, a conformity determination is not necessary.

### 3.3. Community Service

No community facilities currently exist at the proposed project location. The project is within the Houston city limits. Local government and emergency services, such as police and fire, are provided by the City of Houston. Public education for the area is provided by Houston Independent School District (HISD).

### 3.4. Cultural Resources

The project area is located in Harris County, Texas, which is in the Gulf Coastal Plains physiographic region (Wermund 1996). The Texas Coastal Plain is a low, level to gently sloping region extending from Florida to Mexico, as far north as the Ouachita uplift in Oklahoma and as far west as the Balcones escarpment.

#### Prehistoric

The Paleoindian period, generally accepted as the earliest cultural period of the Americas, straddles the end of the Pleistocene era and the beginning of the Holocene. This period is alternatively known as the time of the “Big Game Hunting” tradition, due to the exploitation of the now-extinct species of Pleistocene megafauna such as mastodon, mammoth, bison, horse, and camel. However, few megafaunal assemblages have been found in association with Paleoindian sites in Texas, and it is thought that Paleoindian people probably largely subsisted on a wide range of plants and small game (Patterson 1995). Coastal Paleoindian sites represent inland occupations as the coastline during this time extended 30-40 kilometers beyond its present day location (Ricklis 2004). Generally, temporal associations are based on stone tool assemblages including unifacial side scrapers, graters, and lanceolate projectile points. A number of Paleoindian points (Clovis, Scottsbluff, Plainview, Angostura, San Patrice, and Meserve points) have been found in Harris County.

The beginning of the Archaic Period coincides with the termination of the Wisconsin Glacial period characterized by warmer temperatures, rising sea levels, and the extinction of Pleistocene megafauna. This period is divided into three sub-periods: Early, Middle, and Late. Very few Early Archaic (8,800 B.P. to 5,000 B.P.) sites have been identified in the region possibly due to

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

lower population densities during this transitional period, though since sea levels had not reached modern levels by this time, it is probable that coastal sites associated with the Early Archaic are underwater and/or deeply buried. Those Early Archaic sites identified tend to be located along the inner coastal plain (Story 1990). The changing environmental conditions during this period were the impetus for a growing new ecosystem exploited by early inhabitants of the region who are thought to have relied heavily upon the hunting of smaller animals, gathering of plant resources, and the exploitation of marine resources. As demonstrated by a number of shell middens dating to this period documented in the middle Texas Gulf Coast (Ricklis 2004). As diets changed, so did the stone tool technology used to procure and process these new plants and animals. In general, Archaic people began to make their projectile points with stems and points as the lanceolate form fell from use. These changes in stone tool technology are evident on the Early Archaic points found in the region: Bell, Trinity, and Carrolton points (Patterson 1995).

It is postulated that during the Middle Archaic (5,000 to 3,000 B.P.), population increases and the ubiquitous variety of artifact assemblages denote emerging social and exchange relationships based on group territoriality (Aten 1983) and some limiting of group mobility. New points associated with this expansion in technology include Bulverde, Lange, Pedernales, Williams, and Travis. Middle Archaic sites are more frequent along the coast and shell middens are an important expression of subsistence activities during this period. Organized mortuary practices first appear at this time in the western part of southeast Texas, though it did not reach full development until the Late Archaic (Ricklis 2004).

During the Late Archaic (3,000 to 1,200 B.P.), population increased significantly, as evidenced by an increase in the number of sites as well as intra-site artifacts (Aten 1982). This corresponds to the development of modern climactic conditions leading to the stabilization of sea levels, and expansion of coastal woodlands. Hall (1981) noted the development of trade with Woodland cultures to the east during the Late Archaic as seen in the various artifact assemblages from multiple sites in the region. Limited evidence suggests a settlement system for the Late Archaic which may have included a seasonal round with group dispersal in coastal areas during summer months (Aten 1983). However, the occurrence of shell middens at Late Archaic sites is not as common as at later sites (Patterson 1995). Cemeteries located along major streams from this period seem to indicate a higher degree of territoriality (Story 1985). Projectile points diagnostic of Late Archaic occupations include Gary, Kent, Yarbrough, Ellis, Darl, Fairland, Palmillas, and Refugio types (Patterson 1995).

The Late Prehistoric Period spans the period from the introduction of ceramics to after the arrival of Europeans. Following Wheat's (1953) observations in Addicks Reservoir, the period has been termed the Early Ceramic and the Late Ceramic. Notable innovations during this period include the development of the development of ceramics. The period is characterized by the appearance of sandy-paste pottery across the region referred to as the Mossy Grove Tradition (Aten 1983, Story 1990). The primary characterization of this tradition is the plain, sandy-paste Goose Creek pottery found in this region from the Early Ceramic through Early Historic periods (Story 1990). Another important innovation was the development of the bow and arrow. However, Patterson

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

(1995) postulates that the bow and arrow were in use in Southeast Texas as early as the Middle Archaic. Stone tool technology evolved in step with this new innovation and Late Prehistoric people made their stone points smaller and more diverse in form depending on the game animals hunted. Some of these stone arrow points include Edwards, Scallorn, Zavala, Perdiz, Cuney, Padre and Alba types. Settlement patterns shifted during this time as sedentary and horticultural communities became more common. With the emergence of social and ritual ceremonies, and more defined intraregional differences resulting in the establishment of group territories along major streams (Aten 1983, Patterson 1987). Clear Creek falls within the western margin of one such territory termed the Galveston Bay area (Aten 1983).

### Historic

The historic period begins with the initial contact between native people and European explorers. The first European explorer to reach Texas was Alvar Nunez Cabeza de Vaca during the 1528 Narvaez Expedition of the Gulf coast. Cabeza de Vaca was stranded in Texas for eight years travelling throughout Texas and Mexico meeting different Native American groups. He was eventually rescued and went back to Spain. During his journey, Cabeza de Vaca documented numerous groups of people, their customs, and cultural differences (Chipman 2015). Although, Texas and much of the southeast was claimed by Spain, the French exploration and attempted colonization in the late 1600s led the Spanish to increase their colonization efforts. Subsequent Spanish entradas in Texas began during the early 1700s with the establishment of the Spanish missions. During the mid-18th century the Spanish attempted to firm up their control of eastern Texas in response to the increased French trade with the natives along the Red River and the founding of New Orleans in 1718. However, the Spanish were never able to successfully establish a permanent colony or mission in eastern Texas. By 1803, Spain had ceded Louisiana to the French who in turn sold it a month later to the United States. By this time, not only French but American and English colonists began actively settling eastern and southeastern Texas. Shortly afterward, Mexico gained its independence from Spain with the help of Anglo-Americans living in Texas (Henson 2010, Nue 2015).

Mexican independence caused a rush of immigrants from the east, many of whom received empresario contracts allowing them to settle in Texas. Several of these people became important figures in Texas' independence, including Stephen F. Austin and David G. Burnet (Henson 2010, Nance 2016). Texas gained its independence from Mexico in 1836, following the Battle of San Jacinto, where Sam Houston's forces caught Mexican General Santa Anna off guard. The resulting defeat forced Mexico to sign a peace treaty in Velasco on May 14, 1836, establishing the Republic of Texas. The resulting peace and removal of immigration limitations caused an explosion in the populations of Texas especially along the coast, with many immigrants coming through Galveston and Matagorda (Henson 2010, Nance 2016).

Harris County was formed in December of 1836 as Harrisburg County. The history of the county is directly tied to that of Houston's growth. Augustus and John Allen founded the "Town of Houston" in 1836 named after Sam Houston. Incorporated in 1837, the town became the

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

temporary capital of the Republic of Texas (McComb 2015). After the revolution, Harris counties recovery was slow with economic centers focused on the coast. Trading posts began to stretch out into the interior as far west as Waco, and Steam boat travel along some of the rivers helped increase traffic to the interior of Texas. With the annexation of Texas by the United States in 1847, commercial traffic and immigration to Texas increased, and many people began to move into the areas outside of Houston (Henson 2010).

Pearland began as an agricultural community along a siding switch of the Gulf, Colorado and Santa Fe Railway in 1882. Initially called Mark Belt, the small community was renamed Pearland in 1893 after its plethora of pears trees. With the hurricanes of 1900 and 1915 and subsequent blights, Pearland suffered heavy agricultural losses causing many residents to move away (Allbright 2007). Those that stayed began rice farming and by the 1940's, the area was the nation's leading rice producer. In the 1930's, oil was discovered at the Hastings, Friendswood, and Manvel oilfields greatly benefiting neighboring Pearland (Brazoria County Historical Museum and Commission 1986). Despite Pearland's successes in agriculture, it remained a relatively small farming community well into the 1960s when population began to grow as the area became a bedroom community for Houston (Allbright 2007).

### Previous Investigations

There are no previously conducted surveys within the APE. Five previously conducted surveys and a data recovery project have taken place within 0.62 mile (1 km) of the APE. The previously conducted surveys are all south of the APE.

### **3.5. Floodplains, Wetlands, and Watersheds**

According the Federal Emergency Management Agency's (FEMA 1985) Flood Insurance Rate Map (Panel 48201C1030L, effective 6/18/07), there are no floodplains within the proposed project site (**Exhibit 2**). A review of the U.S. Geological Survey (USGS) topographical map (Pearland, Texas quadrangle) did not identify any streams or wetlands within the project boundary (**Exhibit 3**).

The U.S. Army Corps of Engineers (USACE), under Section 404 of the Clean Water Act, regulates waters of the U.S., which include, but are not limited to, territorial seas, lakes, rivers, streams, oceans, bays, ponds, and other special aquatic features including wetlands. The USACE uses the regulatory phrase "ordinary high water mark" (OHWM) in describing the jurisdictional boundaries of a stream. This phrase refers to the established line on the bank or shore indicated by the fluctuation of water, and an average width is determined. Wetlands, in a broad sense, are transitional areas between terrestrial and aquatic systems where the water table is usually at or near the ground surface, or where the land is covered by shallow water (Cowardin *et al.* 1979). The USACE and the U.S. Environmental Protection Agency (EPA) jointly define wetlands as "areas that are inundated or saturated by surface or groundwater at a frequency and duration to support, and under normal circumstances do support a prevalence of vegetation that is typically

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

adapted for life in saturated soil conditions; wetlands generally include swamps, marshes, bogs, and similar areas” (Environmental Laboratory 1987). The *U.S. Army Corps of Engineers 1987 Wetland Delineation Manual Technical Report Y-87-1* outlines the USACE-approved methods and techniques for the identification and delineation of wetlands.

The U.S. Fish and Wildlife Service’s (USFWS) National Wetland Inventory (NWI) map does not identify any wetlands within the boundary of the project site (**Exhibit 4**). Site reconnaissance confirmed that no potentially jurisdictional streams or wetlands are present within the project site.

### 3.6. Geology and Soils

Houston is located within the eastern part of the Gulf Coastal Plains Physiographic Province (Bureau of Economic Geology 1996). The project area is located within the Coastal Prairies subprovince, which begins at the Gulf of Mexico shoreline and consists of young (Tertiary to Quaternary age), deltaic sands, silts, and clays. The physiography of the surrounding area is characterized as flat, with a mixture of undeveloped, light residential, and industrial properties. The proposed project area is generally flat, and surface water drains generally southeast. Surface elevations within the proposed project site range from approximately 50 ft to 54 ft above mean sea level (**Exhibit 2**).

The proposed project site is located within two sub-types of the Beaumont Formation; Beaumont Formation (sand; Qbs) and Beaumont Formation (clay; Qbc) (**Exhibit 6**). The Qbs consists primarily of unconsolidated sand with some silt. It can be yellow to brownish-gray and reddish orange. Thickness ranges from 10 to 33 feet on the surface, thickening in the subsurface up to 330 feet. The Qbc consists primarily of unconsolidated clay or mud with some silt and has a low permeability. It is light gray and bluish to greenish-gray and can contain organic matter and iron nodules. Thickness ranges from 16 to 33 feet on the surface, thickening in the subsurface up to 330 feet.

Two different soils, Bernard-Edna complex (0 to 1 percent slopes) and Bernard clay loam (0 to 1 percent slopes), were mapped within the proposed project area by the Natural Resources Conservation Service (NRCS 2013) (**Table 1; Exhibit 5**). None of these soils is described as hydric, and both soils are described as prime farmland.

**Table 1. Soil units within the proposed project site according to the NRCS Web Soil Survey.**

Mapping Unit	Hydrologic Soil Group	Drainage Class	NRCS Hydric Rating	Farmland Classification
Bernard clay loam, 0 to 1 percent slopes (Bd)	D	Somewhat poorly drained	Non hydric	All areas are prime farmland
Bernard-Edna complex, 0 to 1 percent slopes (Be)	D	Somewhat poorly drained	Non hydric	All areas are prime farmland

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

### 3.7. Hydrology, Water Quality

The proposed project site is located in the San Jacinto-Brazos Basin, which lies on the coastal plain between the San Jacinto River and Brazos River and drains into Galveston Bay, West Bay, and Christmas Bay. The total drainage area is 1,740 square miles. Slope is generally 1% or less with elevations ranging from 50 ft. to 54 ft. above mean sea level.

### 3.8. Land Use and Recreation

The proposed project site is currently undeveloped. Approximate elevation ranges from 50 ft. to 54 ft. above mean sea level, and surface drainage generally flows southeast. The project site is bound by undeveloped property on all sides. Residential development is present further north of the property, and Beltway 8 is located just south of the project site. A review of the Texas Outdoor Recreational Inventory (TORI), the Texas Outdoor Recreational Plan (TORP), and federal, state, and local maps did not identify any public or private recreational facilities at the proposed site (TPWD 1990; TPWD 2012). The nearest public recreational facility, Christia V. Adair County Park, is located approximately 0.8 miles southwest of the project site at 15107 Cullen Blvd. A private recreational facility, 288 Lake, is located immediately north of the project site.

### 3.9. Noise

Noise is defined as unwanted sound that disrupts or interferes with normal activities, or that diminishes the quality of the environment. Noise is usually caused by human activity and is added to the natural acoustic setting of an area. Exposure to high levels of noise over an extended period can cause health hazards, such as hearing loss; however, the most common human response to environmental noise is annoyance. Individuals respond to similar noise events differently based on various factors that may include the existing background level, noise character, level fluctuation, time of day, perceived importance of the noise, appropriateness of the setting, and sensitivity of the individual.

In order to measure sound in a manner similar to human perception, an adjustment known as “A” weighting is used. All regulatory agencies require that measurements are taken using the A-weighted sound level (dBA).

Although A-weighted sound measurements indicate a level of environmental noise at any given time, community noise levels vary constantly. Typical noise environments consist of numerous noise sources that vary and fluctuate over time. Because of the varying noise levels within a community, it is necessary to use a description called the equivalent sound level ( $L_{eq}$ ).  $L_{eq}$  is the average sound level, in decibels, for any time period under consideration.

The EPA has developed the day-night level ( $L_{dn}$ ), which is defined as the A-weighted average sound level for a 24-hour period. It is calculated by adding a 10-dBA penalty for nighttime

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

(10:00 PM to 7:00 AM) sound levels to account for increased sensitivity to noise during the evening hours.

Land uses such as housing, religious, educational, and medical facilities are more sensitive to increased noise levels than commercial and industrial land uses. Noise-sensitive areas near the project site are residential and recreational areas. The existing noise environment of these communities is affected by a number of sources, most of which are transportation-related (i.e., roadway, etc.). An active quarry is located approximately 0.2 miles west of the proposed living center site. This quarry should only be active during daytime hours and thus should not cause an adverse impact with respect to noise.

### **3.10. Potential for Generating Substantial Controversy**

As of June 10, 2016, there has not been any controversy or opposition to the proposed project. In a June 1, 2016 press release, Houston mayor Sylvester Turner and Texas Land Commissioner George P. Bush gave their support of the proposed project.

The following agencies and offices have been contacted regarding the proposed project: U.S. Army Corps of Engineers – Galveston District, U.S. Environmental Protection Agency – Region 6, U.S. Fish and Wildlife Service, Federal Emergency Management Agency, Federal Aviation Administration, Texas Department of Transportation, Texas Commission on Environmental Quality, Texas Historical Commission, Texas Parks and Wildlife Department, Texas Water Development Board, Natural Resources Conservation Service, Houston-Galveston Area Council, the Harris County Precinct 7 judges, the Harris County Precinct 1 Commissioner, the Superintendent of Houston Independent School District, and the City of Houston. A draft letter can be found in **Appendix C**.

### **3.11. Real Property**

According to the Harris County Appraisal District (HCAD), the project site is part of a larger 137-acre tract owned by the State of Texas with an HCAD Account Number of 0410840000086. The legal description for the site is as follows: Lots 1, 2, 3, 4 & 8, 9, 10, 11 Sec. B & Lots 3, 4, 5, 6 & 15, 16,17, 18 & 24 Thru 29 & 33 Thru 38 \* TR 19 Sec. C, Abstract 128 M C Bulrice (**Appendix D**).

### **3.12. Socioeconomic Considerations**

This section presents a summary of demographic and economic characteristics for the City of Houston (or the Houston-area), Harris County, and the State of Texas and describes the socioeconomic environment of the vicinity of the project site. Literature sources reviewed include publication by the U.S. Census Bureau (BOC), the Texas Workforce Commission (TWC), Bureau of Labor Statistics (BLS), and Texas Water Development Board (TWDB).

#### Population Trends

# STATE VETERANS HOME - HOUSTON

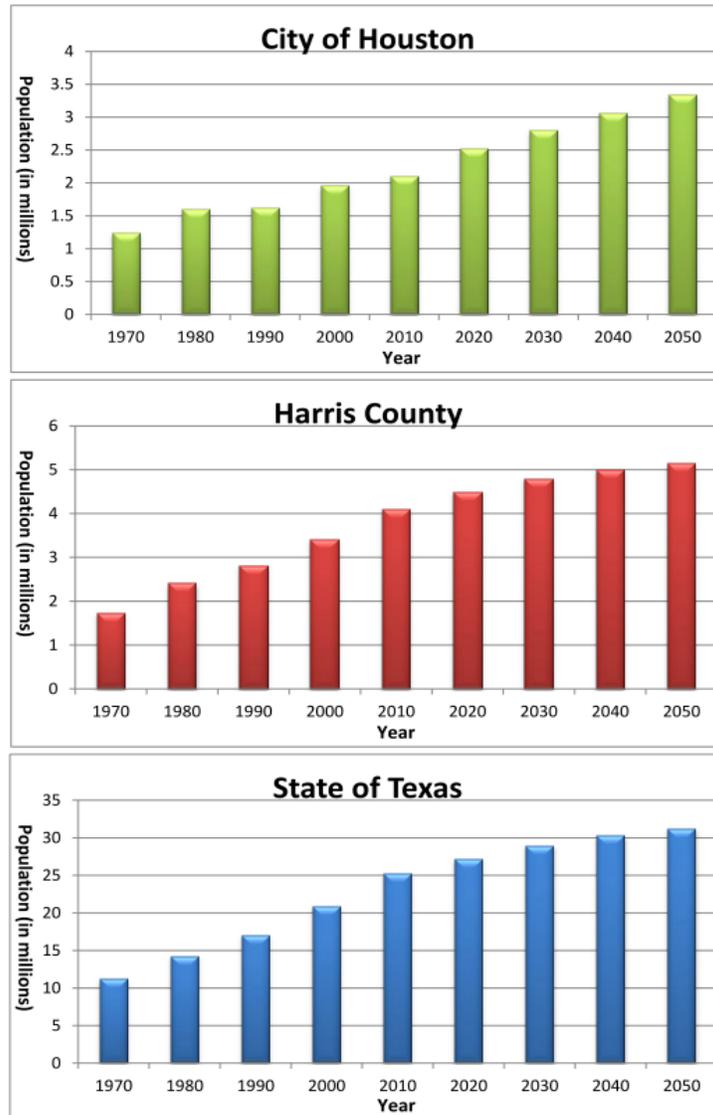

## Environmental Assessment

The study site is located within the City of Houston, Harris County, Texas. As shown in **Figure 1**, the population of Houston increased by 361,633 (29.3%) from 1970 to 1980, by 36,628 (2.3%) from 1980 to 1990, by 321,865 (19.7%) from 1990 to 2000, and by 146,632 (7.5%) from 2000 to 2010. For comparison, Harris County increased by 667,653 (38.3%) during the 1970s, by 408,652 (17.0%) during the 1980s, by 582,379 (20.7%), during the 1990s, and by 671,881 (20.3%) during the 2000s. The state's population grew by 27.1% during the 1970s, by 19.8% during the 1980s, by 22.9% during the 1990s, and by 20.5% during the 2000s (BOC 2016).

According to TWDB, the City of Houston and Harris County are expected to have substantial population growth from 2010 to 2050. The population is expected to increase 59.5% in the City of Houston and by 25.7% in Harris County during this time. For comparison, the state's population is expected to increase by 23.7% during this time period (TWDB 2015).

# STATE VETERANS HOME - HOUSTON Environmental Assessment

Figure 1. Populations of City of Houston, Harris County, and State of Texas from 1970-2050.

## Employment

As shown in **Figure 2**, there was no correlation in the rate of change in the labor force between the Houston area, Harris County, and state. The labor force in the Houston-The Woodlands-Sugarland area increased approximately 351,236 (17.3%) between 1990 and 2000, by 586,986 (24.6%) between 2000 and 2010, and by 268,965 (9.1%) between 2010 and 2014. For comparison, the work force in Harris County increased by approximately 81,969 (5.2%) in the 1990s, by 444,105 (26.9%) in the 2000s, and by 203,225 (9.7%) between 2010 and 2014. The

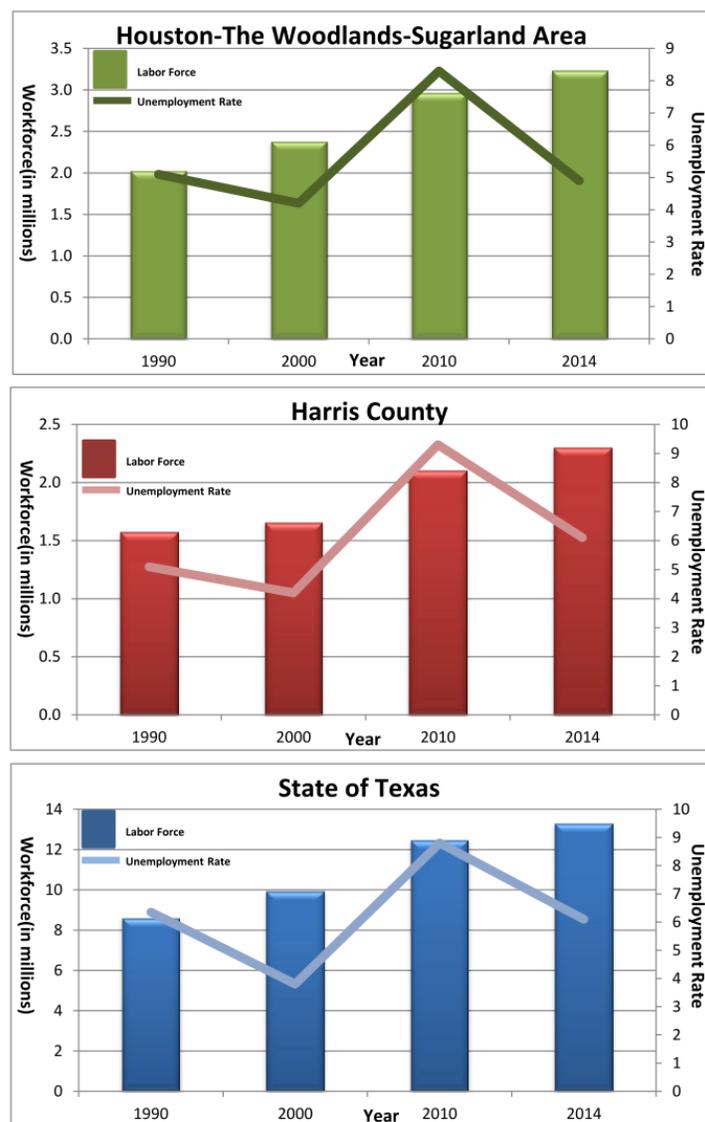

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

state's labor force grew by approximately 15.5% during the 1990s, by 25.5% during the 2000s, and by 6.6% between 2010 and 2014 (BOC 2010; TWC 2015; BLS 2015).

In 1990, the unemployment rate for the Houston-The Woodlands-Sugarland area was 5.1%. The unemployment rate decreased to 4.2% in 2000, increased to 8.3% in 2010, then decreased to 4.9% in 2014 (BLS 2015). For comparison, the unemployment rate for Harris County was 5.1% in 1990, 4.2% in 2000, 9.3% in 2010, and 6.1% in 2014. The unemployment rate for the state was 6.4% in 1990, 3.8% in 2000, 8.8% in 2010, and 6.1% in 2014 (TWC 2015).

Figure 2. Workforces and unemployment rates of Houston-area, Harris County, and State of Texas.

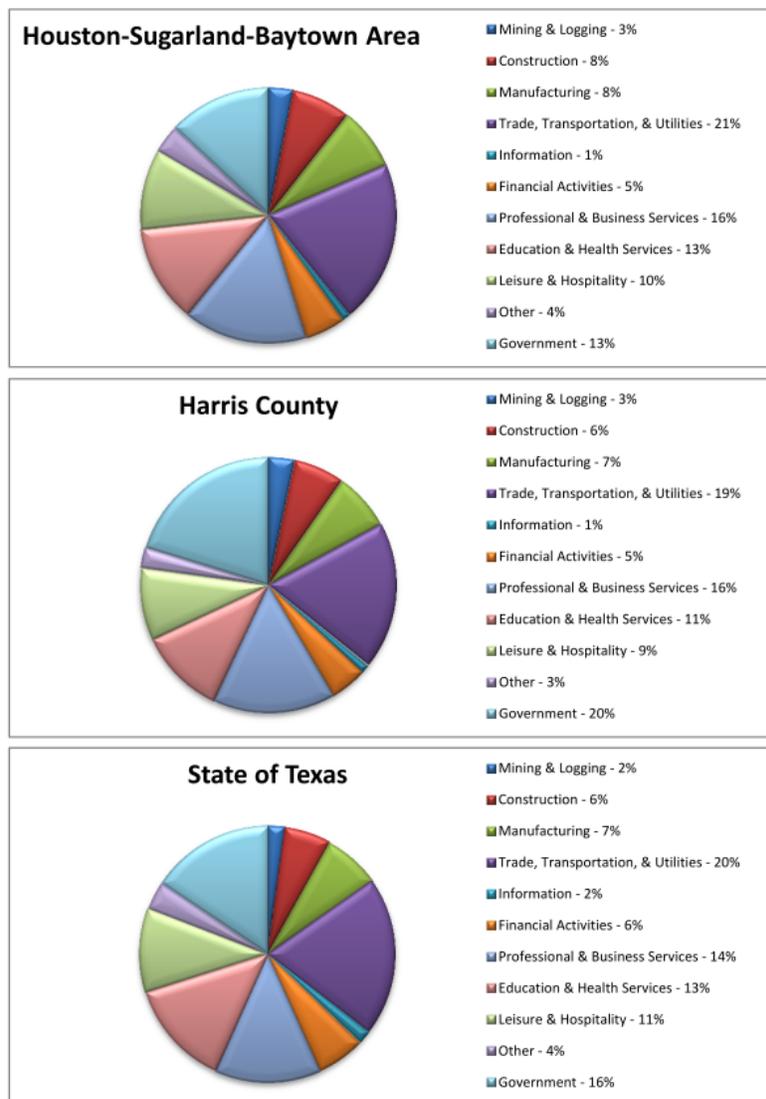

# STATE VETERANS HOME - HOUSTON Environmental Assessment

## Leading Economic Sectors

As shown in **Figure 3**, fourth quarter TWC employment figures for 2015 show that leading economic sectors in the Houston-Sugarland-Baytown area are Trade, Transportation, & Utilities (21%), Professional & Business Services (16%), and Government (13%). In comparison, leading environmental sectors in Harris County are Government (20%), Trade, Transportation, & Utilities (19%), and Professional & Business Services (16%). Leading economic sectors for the state are Trade, Transportation, & Utilities (20%), Professional & Business Services (14%), and Education & Health Services (13%) (BLS 2016).

**Figure 3. Economic sectors of Houston-area, Harris County, and State of Texas (fourth quarter 2015).**

# STATE VETERANS HOME - HOUSTON Environmental Assessment

## 3.13. Environmental Justice and Environmental Health and Safety

### Environmental Justice

Executive Order (EO) 12898 – Federal Action to Address Environmental Justice (EJ) in Minority Populations and Low-Income Populations was signed on February 11, 1994 by President Clinton. The EO requires all federal agencies to address the impact of their programs with respect to EJ. The EO requires that minority and low-income populations not receive disproportionately high or adverse human health or environmental impacts and requires that representatives of any low-income or minority populations that could be affected by the project be involved in the community participation and public involvement process.

The data used in this study to determine the potential for disproportionate effects to low-income and/or minority populations within the vicinity of the site are based on 2010 U.S. Census Bureau block, block group, census tract, city, and county level data for ethnicity. As defined by the Council on Environmental Quality (CEQ), a minority population is defined as either: (a) the minority population of the affected area exceeds 50%, or (b) the minority population percent of the affected area is meaningfully greater than the minority population percentage in the general population or other appropriate geographical analysis. Due to the geographic location of the proposed project and the composition population, for this analysis, the population is considered to be a minority population if the percentage of minority persons in the study area is meaningfully greater than the minority population percentage in the general population or other appropriate geographical analysis.

**Table 2. Minority and low-income characteristics of the project area.**

Census Geography			Total Population	Racial/Ethnicity Distribution										Income	
Census Tract	Block Group	Block		White	Black	American Indian/Alaska Native	Asian	Native Hawaiian & Other Pacific Islander	Hispanic or Latino	Two or More Races	Other	Racial Minority	Below Poverty Level	Median Household Income	
3308	-	-	10,345	9.2	50.7	0.2	3.1	0.0	33.3	3.6	-	90.8	12.0%	\$63,355	
3308	1	-	3,898	12.1	23.8	0.0	2.1	0.0	60.7	1.2	-	87.9	11.3%	\$61,607	
3308	1	1	10	9	1	0.0	0.0	0.0	0.0	0.0	-	10.0	NA	NA	
3308	1	2	0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	-	-	NA	NA	
City of Houston			2,167,988	25.5	22.8	0.2	6.3	0.0	43.9	1.2	0.1	74.5	22.9%	\$45,728	
Harris County			4,269,608	32.1	18.5	0.2	6.4	0.1	41.4	1.2	0.2	67.9	18.4%	\$53,822	

Source: U.S. Census Bureau 2015.

The census tracts located within and/or adjacent to the study site were used to represent the population potentially affected by the proposed project.

The number of persons report in in non-white racial categories, including Black or African America, American India, Alaska Native, Asian, Native Hawaiian and Other Pacific Islander, Hispanic or Latino, Other Race, or Two or More Races.

Poverty level data as reported in the 2014 U.S. Department of Health and Human Services Annual Update on the HHS Poverty Guidelines (most recent available).

The proposed project would be located entirely within census tract (CT) 3308 in Harris County, Texas. As shown in **Table 2**, the project area is largely unpopulated. Both blocks within the same census tract as the proposed project have a small or no population. CT 3308 does represent

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

a minority population. When compared to the populations of the City of Houston and Harris County (minority populations are 74.5% and 67.9%, respectively), CT 3308 contains a greater percentage of minorities (90.8%) (U.S. Census Bureau 2015).

The median household incomes of the project area census tracts and block groups are all greater than the U.S. Department of Health and Human Services (DHHS) 2014 poverty guideline for a family of four (\$23,850). Therefore, the project area does not represent a low-income population (DHHS 2014; U.S. Census Bureau 2014).

### Environmental Health and Safety

EO 13045, Protection of Children from Environmental Health Risks and Safety Risks, was signed April 21, 1997 by President Clinton and requires all federal agencies to address the impact of their programs with respect to the EO. The EO requires that all federal agencies must identify and address each environmental health risk and safety risk that may disproportionately affect children and address such risks in their policies, programs, activities, and standards. Agencies must conduct an evaluation of environmental health and safety effects on children and include an explanation of why the planned action is preferable to other potentially effective and feasible alternatives considered by the agency for all regulatory sections of the EO.

The vicinity of the proposed project is currently a low-density urban area. Potential exists for increased residential growth in the City of Houston and surrounding area. According to USGS maps, there are no schools, hospitals, or wildlife refuges within the affected site. The nearest public park/recreation area is Christia V. Adair County Park, located approximately 0.8 miles southwest of the project site. There is a private recreation facility, 288 Lake, located immediately north of the project site. The nearest school to the project site is Frost Elementary School, located approximately 1 mile north of the project site.

#### **3.14. Solid/Hazardous Waste**

Solid and/or hazardous waste is not currently generated on the project site. Evidence of hazardous waste was not observed during the site visit. The proposed facility would generate solid waste, and a local waste disposal firm would be contracted for proper disposal.

A Phase I environmental site assessment of the property was performed in May of 2016. The results of this assessment indicated that the property has remained undeveloped from at least 1920 to present day. The assessment found no evidence of Recognized Environmental Concerns (RECs) in connection with the property.

#### **3.15. Transportation/Traffic and Parking**

The major transportation feature near the proposed living facility location is Beltway 8. The remainder of the transportation grid near the study area is a network of secondary and local

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

roads. Beltway 8 is a state highway that encircles the Houston metro area and is entirely within Harris County. Beltway 8 is a well-maintained, two- to five-lane paved road and is approximately 88.1 miles in total length.

A review of the Houston Section al Aeronautical Chart (FAA 2016), the Airport/Facility directory, AirNav, and the TxDOT Airport Directory (2006) resources indicate one major commercial airport, William P. Hobby Airport, is located approximately 5.0 miles northeast of the proposed project site.

Designated parking spaces are included in the plans for the proposed living facility. Plans include 129 parking spaces, four of which will be designated handicapped parking spaces. The increased traffic associated with the proposed facility is anticipated to be negligible in the overall traffic volumes of the area. No mitigation measures are warranted.

### 3.16. Vegetation

The Texas Parks and Wildlife Department (TPWD) *Vegetation Types of Texas* describes the study area as “Crops” (McMahan *et al.* 1984). The site is listed as ‘Western Gulf Coastal Plain-Northern Humid Gulf Coast Prairies’ in *Level IV Ecoregions of Texas*. Vegetation observed throughout the site includes water oak (*Quercus nigra*), post oak (*Quercus stellata*), yaupon (*Ilex vomitoria*), greenbrier (*Smilax sp.*), Chinese tallow (*Sapium sebiferum*), Japanese privet (*Ligustrum japonicum*), King Ranch bluestem (*Bothriochloa ischaemum*), giant ragweed (*Ambrosia trifida*), poison ivy (*Toxicodendron radicans*), dewberry (*Rubus sp.*), and St. Augustine grass (*Stenotaphrum secundatum*).

#### Endangered and Threatened Flora

The FWS Southwest Region Ecological Services Species by County List, TPWD’s Texas Natural Diversity Database, and TWPD’s Annotated County List of Rare Species were reviewed concerning the potential occurrence and known locations of state and federally listed species in the general project area (USFWS 2016; TXNDD 2016; TPWD 2016). TPWD’s Annotated County List of Rare Species includes the same species as FWS Southwest Region Ecological Services Species by County lists as endangered or threatened. FWS and TPWD both list the Texas prairie dawn (*Hymenoxys texana*) as an endangered species potentially occurring in Harris County.

The Texas prairie dawn was federally listed as endangered in 1986 (USFWS 1986). This species was first discovered in 1889 and was believed to be extinct until rediscovery in 1981. The Texas prairie dawn is endemic to the Houston area and occurs in sparsely vegetated or barren areas on slightly saline soils in coastal prairie grasslands (TPWD 2016). TXNDD data does not indicate any known occurrences of this species near the project area (TXNDD 2016) (**Exhibit 8**). Due to the large amount of vegetation and ground cover, this species is not likely to occur within the project site.

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

TXNDD lists an element of occurrence for a vertisol coastal prairie plant community approximately 6.7 miles southwest of the site (TXNDD 2016). Characteristic species of this plant community include little bluestem (*Schizachyrium scoparium*), yellow Indiangrass (*Sorghastrum nutans*), brownseed paspalum (*Paspalum plicatulum*), littletooth sedge (*Carex microdonta*), and yellow puff (*Neptunia lutea*). None of these species are listed as threatened or endangered by USFWS or TPWD. No date is listed for the element of occurrence. A review of aerial imagery shows the current land use at the element of occurrence for the vertisol coastal prairie is currently agricultural. Thus, the presence of this plant community within the project site is highly unlikely.

### 3.17. Wildlife

The study area lies within Baily's (1983) Prairie Parkland (Subtropical) Province. This province consists of temperate prairies and savannas, often dominated by grasses and hardy trees. Oaks, hickories, and evergreens are common tree species. Fauna in this province include white-tailed deer (*Odocoileus virginianus*), raccoon (*Procyon lotor*), swamp rabbit (*Sylvagus aquaticus*), gray squirrel (*Sciurus carolinensis*), reddish egret (*Egretta rufescens*), white faced egret (*Egretta novahollandiae*), white-tailed hawk (*Buteo albicaudatus*), bronzed cowbird (*Molothrus aeneus*), mourning dove (*Zenaida macroura*), northern cardinal (*Cardinalis cardinalis*), American alligator (*Alligator mississippiensis*), Texas spiny lizard (*Sceloporus olivaceus*), and diamondback terrapin (*Malaclemys terrapin*) (Baily 1983).

During the May 2016 site visit, observed fauna included white-wing dove (*Zenaida asiatica*), northern cardinal (*Cardinalis cardinalis*), mockingbird (*Mimus polyglottos*), American crow (*Corvus brachyrhynchos*), turkey vulture (*Cathartes aura*), and black-bellied whistling duck (*Dendrocygna autumnalis*). Tracks of white-tailed deer and feral pigs (*Sus scrofa*) were also observed on-site.

#### Endangered and Threatened Fauna

The Endangered Species Act (ESA) (16 USC 1531 et. seq.) of 1973, as amended, was enacted to provide a program for the preservation of endangered and threatened species and to provide protection for the ecosystems upon which these species depend on for their survival. All federal agencies are required to implement protection programs for these designated species and to use their authorities to further the purposes of the act. Responsibility for the identification of an endangered or threatened species and any potential recovery plans lies with the Secretary of the Interior and the Secretary of Commerce.

**Table 3** lists species that have federal or state status of either threatened or endangered and have the potential to occur in Harris County, Texas (TPWD 2016; USFWS 2016). Inclusion on **Table 3** does not imply that a species occurs within the project site, but only acknowledges previous

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

records of occurrence or potential occurrence throughout Harris County, based on information available to the USFWS and TPWD at the date of preparation.

**Table 3. TPWD endangered and threatened species with potential to occur in Harris County, Texas.**

Loggerhead sea turtle	<i>Caretta caretta</i>	T	T
Texas horned lizard	<i>Phrynosoma cornutum</i>	-	T
Timber rattlesnake	<i>Crotalus horridus</i>	-	T

E – Endangered; T – Threatened; DL – Federally De-listed.

Twenty five wildlife species in **Table 3** are federally- or state-listed as endangered or threatened and have the potential to occur in Harris County. Two species, the arctic peregrine falcon (*Falco peregrinus tundrius*) and the brown pelican (*Pelecanus occidentalis*), have been federally de-listed as endangered or threatened and do not have a state-listed protection status.

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

No waters of the U.S., saltwater or freshwater, are present within the proposed project area. Therefore, aquatic species cannot occur within the project site. These species include: creek chubsucker (*Erimyzon oblongus*), smalltooth sawfish (*Pristis pectinata*), Louisiana pigtoe (*Pleurobema riddellii*), sandbank pocketbook (*Lampsilis satura*), Texas pigtoe (*Fusconaia askewi*), alligator snapping turtle (*Macrochelys temminckii*), green sea turtle (*Chelonia mydas*), Kemp's Ridley sea turtle (*Lepidochelys kempii*), leatherback sea turtle (*Dermochelys coriacea*), loggerhead sea turtle (*Caretta caretta*), and West Indian manatee (*Trichechus manatus*).

The Houston toad (*Bufo houstonensis*) is an amphibian endemic to Texas. This species typically breeds in streams and pools between February and June, and burrows into sandy soils when inactive. Houston toads are predominantly found on sandy soils within the Sparta, Carrizo, Goliad, Queen City, Reklaw, Weches, and Willis geologic formation. The proposed project site is not located within any of these geologic formations (**Exhibit 6**). Houston toads have likely been extirpated from historic locations in Harris, Liberty, and Fort Bend Counties (Seal 1994). TXNDD lists an element of occurrence 3.1 miles northeast of the project site, however the last observation of Houston toads at this location was in 1976 (TXNDD 2016). The occurrence of Houston toads within the project area is highly unlikely.

The American peregrine falcon (*Falco peregrinus anatum*) is a bird of prey and a subspecies of the peregrine falcon. This subspecies was federally de-listed as threatened or endangered in 1999, however TPWD still considers it to be threatened (USFWS 1999; TPWD 2016). The American peregrine falcon is a year-round resident and local breeder in west Texas, but may migrate through other parts of the state. American peregrine falcons may occupy a wide range of habitat during migration. This species is a rare migrant in the eastern portion of the state, and thus likely does not occupy the proposed project site.

The Arctic peregrine falcon (*Falco peregrinus tundrius*) is a bird of prey and a subspecies of the peregrine falcon. This subspecies was federally de-listed as threatened or endangered in 1994 and is not currently considered threatened or endangered by TPWD (USFWS 1994; TPWD 2016). The Arctic peregrine falcon is considered a migrant in Texas and may occupy a wide range of habitats during migration (Campbell 2003). This species is a rare migrant and thus likely does not occupy the proposed project site.

The bald eagle (*Haliaeetus leucocephalus*) is a bird of prey that inhabits trees over 40 feet in height and near (within 2 miles) a large body of water, such as a large river, lake, or bay (Campbell 2003). In 2007, the bald eagle was federally de-listed as an endangered or threatened species (USFWS 2007). Because no large trees are present within the proposed project area and the project area is not within 2 miles of a large body of water, occurrence of the bald eagle within the project site is not expected.

The red knot (*Calidris canutus rufa*) is a migratory shorebird that was designated as threatened by USFWS in 2014 (USFWS 2014). This species spends winters along the Texas coast and

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

primarily occupies shorelines of coasts, bays, and occasionally mudflats. Counties that red knots are typically found include Aransas, Brazoria, Calhoun, Cameron, Chambers, Galveston, Jefferson, Kennedy, Kleberg, Matagorda, Neuces, San Patricio, and Willacy Counties. Because the proposed project site does not contain coastline or wetlands and is not located in a county typically occupied by red knots, regular occurrence is not anticipated.

The red-cockaded woodpecker (*Picoides borealis*) is a medium-sized species of woodpecker known to inhabit mature pine forests in east Texas. The species was listed as endangered in 1970 and is still considered by USFWS and TPWD to be endangered (USFWS 1970; TPWD 2016). Preferred habitat for red-cockaded woodpecker nesting contains 60-70 year old pines with a grassy or herbaceous understory with few or no mid-story trees (Campbell 2003). The proposed project site lacks mature pines and contains a dense understory, thus, regular occurrence of the red-cockaded woodpecker is not anticipated.

The white-faced ibis (*Plegadis chihi*) is a large wading bird that is considered threatened according to TPWD. The species inhabits freshwater marshes, sloughs, and irrigated rice fields and will occasionally inhabit brackish and saltwater marshes. The white-faced ibis typically nests in low trees, on the ground in bulrushes or reeds, or on floating mats (TPWD 2016). The proposed project site does not contain wetlands, marshes, or streams, regular occurrence of the white-faced ibis is not expected.

The white-tailed hawk (*Buteo albicaudatus*) is a larger bird of prey that is considered threatened according to TPWD. This species is typically found near coasts on prairies, cordgrass flats, and scrub-live oak habitats, or further inland on prairies, mesquite-oak savannas, and mixed savanna-chaparral habitats (TPWD 2016). This species could potentially occur within the project site.

The whooping crane (*Grus Americana*) is a large, migratory species of wading bird that was listed as endangered in 1970 (USFWS 1970). This species migrates from the northern Great Plains or Rocky Mountains to the Texas coast, where it spends winters. Coastal marshes and wetlands of Aransas, Calhoun, and Refugio Counties are preferred nesting grounds for whooping cranes. During migration, flooded croplands, fields, and pastures may serve as feeding and roosting habitat (Campbell 2003). Because the proposed project site does not contain any wetlands, marshes, or agricultural fields, occurrence of whooping cranes is not expected.

The wood stork (*Mycteria americana*) is a large species of wading bird that was originally listed as endangered by USFWS in 1984, but was relisted as threatened in 2014 (USFWS 1984; USFWS 2014). This bird forages in prairie ponds, flooded pastures, ditches, or other shallow standing water. Wood storks may be found in or near freshwater or saltwater. Nesting typically takes place in tall trees or snags in lowland wetlands (TPWD 2016). The proposed project area lacks standing water, thus, regular occurrence of wood storks within the project site is not anticipated.

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

The Louisiana black bear (*Ursus americanus luteolus*) is one of sixteen subspecies of American black bear found in North America. The subspecies was originally federally-listed as threatened in 1992, but was de-listed in 2016 (USFWS 1992; USFWS 2016). Typical habitat of the Louisiana black bear is large tracts of bottomland hardwood forest and/or swamps of eastern Texas, Louisiana, and Arkansas. Other habitat types include brackish and freshwater marshes, salt domes, wooded spoil levees along canals and bayous, and agricultural fields. Remoteness and a lack of urban development is an important habitat feature (Campbell 2003). The proposed project site has a close proximity to the City of Houston, therefore regular occurrence of the Louisiana black bear is not expected.

Rafinesque's big-eared bat (*Corynorhinus rafinesquii*) is a species of bat found throughout the southeastern United States and is considered by TPWD to be threatened. Roosting habitat for the species includes cavity trees of bottomland hardwoods, concrete culverts, and abandoned man-made structures. No trees with cavities were discovered and no culverts or abandoned man-made structures are present within the proposed project site, thus occurrence of Rafinesque's big eared bat is not anticipated.

The red wolf (*Canis rufus*) is a species of wolf that was listed as endangered in 1967 (UFWFS 1967). The historic range of the red wolf spanned from eastern Texas to Florida and extended as far north as Pennsylvania (Nowak 1979). However, it has long been presumed that the red wolf has been extirpated in Texas (Mech and Nowak 2010). It is highly unlikely that the red wolf is present within the project area because it has been extirpated in Texas.

The Texas horned lizard (*Phrynosoma cornutum*) is a medium-sized species of lizard native to Texas, northern Mexico, eastern New Mexico, Oklahoma, Kansas, and parts of Colorado and Arkansas. Habitat includes open, arid to semi-arid regions with sparse vegetation. Soil in preferred habitat is typically sandy or rocky (TPWD 2016). Because the proposed project site lacks open, arid habitat and is dominated by dense vegetation, presence of the Texas horned lizard is not anticipated.

The timber rattlesnake (*Crotalus horridus*) is a venomous snake found throughout the southeastern United States. TPWD considers this species to be threatened, however USFWS gives it no protection status (TPWD 2016). Habitat for the timber rattlesnake includes swamps, floodplains, upland pine and deciduous woodlands, riparian zones, and abandoned farmlands. Dense ground cover is preferred by the species. Because the project site is dominated by dense vegetation and timber rattlesnake can occupy a wide variety of habitats, this species could potentially occur within the proposed project site.

The smooth green snake (*Liochlorophis vernalis*) is a species of reptile that is listed as threatened according to TPWD. However, TPWD does not list this species as having potential occurrence in Harris County (TPWD 2016) (**Appendix B-1**). TXNDD lists an element of occurrence approximately 3.1 miles northeast of the project site (**Exhibit 8**). This element of occurrence was collected in 1964. Given that TPWD does not list this species as potentially present in Harris

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

County and that the most recent element of occurrence is from 1964, it is highly unlikely the smooth green snake occupies the project site.

Under the federal ESA, the Secretary of the Interior may designate “critical habitat” for an endangered or threatened species. The ESA defines critical habitat as “the specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the provisions of Section 4 of this Act, on which are found those physical or biological features (I) essential to the conservation of the species, and (II) which may require special management consideration or protection; and specific areas outside the geographical area occupied by the species at the time it is listed... upon determination by the Secretary that such areas are essential for the conservation of the species.” No designated critical habitat is located within 30 miles of the project site.

#### 4. EVALUATION OF POTENTIAL ENVIRONMENTAL IMPACTS

This section reviews the potential for environmental impacts to occur as a result of the construction of the proposed project.

##### 4.1. Aesthetics

Aesthetic impacts, or impact upon visual resources, exist when project structures create an intrusion into or substantially alter the character of an existing scenic view. In the case of natural scenic areas, the significance of the impact is directly related to the quality of the view, or in the case of valued community resources and recreational areas, the importance of the existing setting in the use and/or enjoyment of an area. In order to evaluate aesthetic impacts, field surveys were conducted in May of 2016 to determine the general aesthetic character of the area and the degree to which the proposed actions would be visible from selected areas.

The proposed community living center would have both temporary and permanent aesthetic effects. Temporary effects would include views of the construction site. The view of the construction site from the road would include building materials, construction trucks, lighting, vegetation clearing, ground-disturbing activities, increased heavy equipment, and dust. Permanent impacts from the project would occur once the proposed community living center is built and would consist of the view of the living center, evening illumination, and a manicured landscape. Living center components are not expected to adversely affect local views.

##### 4.2. Air Quality

Sources of air emissions would include exhaust from construction equipment and dust from earthmoving activities and vehicles operating on exposed soil. These emissions are expected to cease following construction activities. Although construction activities would produce dust and particulate emissions, these actions should pose no significant long-term impact upon air quality standards. Any minimal dust and particulate emissions should be easily controlled by the construction contractors by using standard dust mitigation techniques. All areas disturbed during

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

construction would be seeded with native grasses as soon as possible after construction to minimize erosion. Bare soil would be watered frequently to reduce dust and other means would be employed to reduce dust created by truck traffic during construction.

In the long term, air emissions attributed to project operations, such as vehicle emissions due to visitor and employee traffic to the site, are expected to cause minimal impacts. Due to the low trip volume anticipated for the living center, long-term air quality impact are not considered significant and detailed modeling of emission is not warranted.

An addition source of emissions would be landscaping and maintenance equipment. Emissions from equipment fuel tanks would be allowable under TCEQ's Permits by Rule S 106.473 and S 106.454, respectively. Records would be kept on-site in accordance with these rules. In general, a facility or unit meeting the requirements of a permit by rule would not make a significant contribution of air contaminants to the atmosphere. Thus, significant impacts to air quality are not expected.

### **4.3. Community Services**

No community facilities currently exist at the proposed project site. The living center site is within the city limits of Houston; therefore, local government and emergency services such as police and fire are provided by the City of Houston. Public education is provided by the Houston Independent School District.

### **4.4. Cultural Resources**

A cultural resource file records review was performed to determine if the project area has been previously surveyed for cultural resources or if any archeological sites have been recorded within the APE. To conduct this review, an archeologist reviewed the Pearland USGS 7.5-minute topographic quadrangle maps at the Texas Archeological Research Laboratory (TARL) and on the THC's Texas Archeological Sites Atlas (Atlas). These sources provide information on the nature and location of previously conducted archeological surveys, previously recorded cultural resource sites, locations of NRHP properties, sites designated as SALs, Official Texas Historical Markers, Registered Texas Historic Landmarks (RTHLs), cemeteries, and local neighborhood surveys. The literature review examined archeological reports and project files which are housed at TARL and the THC Library. Historic maps at Nationwide Environmental Title Research (NETR Online) were also utilized to assess the potential presence of historic archeological resources in or near the project area. Other sources, such as aerial maps and United States Department of Agriculture (USDA) soil surveys, were also consulted as part of the study.

Subsequent to the background review, a combination of reconnaissance and intensive survey was accomplished across the entire area of potential effects (APE) (Moore, 2016). The survey area is situated along Cottingham Road and is about 815 (ft) (248 m) south of the roadway's intersection with Schurmier Road. State Highway BW8 is about 943 ft (287 m) to the south of the APE. No archeological sites were previously recorded at this location and none were

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

identified during the current survey. The Intensive Archeological Survey Report is available at TARL and the THC.

The cultural resources investigations records review determined there are no NRHP-listed properties, SALs, OTHMs, RTHLs, cemeteries, or previously recorded archeological sites within the APE

There are no previously recorded sites located within the APE. One prehistoric archeological site, 41HR817, is situated on the east side of Clear Creek and 0.53 miles (0.86 km) south of the APE. Moore Archeological Consulting, Inc. conducted survey and data recovery investigations that included trenching and the excavation of five 1x1-m units on behalf of the Harris County Flood Control District (HCFCD) under Antiquities Permit Number 2012 (Pearl 1997; Mahoney and Moore 1998).

### **4.5. Floodplains, Wetlands, and Watersheds**

The proposed project site is outside the limits of the 100 year floodplain (**Exhibit 2**). Therefore, no impacts to floodplains are anticipated.

Construction of the proposed community living center should not adversely affect surface water quality, flooding, or groundwater quality with the implementation of proper stormwater controls and pollution prevention measures. During construction efforts, a Storm Water Pollution Prevention Plan (SWPPP), along with best management practices (BMPs), would be implemented during all phases of construction in compliance with the TCEQ and EPA National Pollution Discharge Elimination System (NPDES) standards.

All facilities will be constructed in uplands. No potential waters of the U.S. or jurisdictional wetlands were identified within the project site.

### **4.6. Geology and Soils**

Construction of the proposed community living center is not anticipated to have a significant impact on the topography or geological resources of the project area. The construction of buildings, roads, and/or subsurface utility lines would require their removal and/or disturbance of small amounts of near-surface materials, but would have no measurable impacts on geological features or mineral resources. Impact potential from geologic faults or earthquakes within the project area is considered to be minimal.

The construction of the proposed living facility would create few long-term adverse impacts on the project soils. Erosion and soil compaction are the major potential impacts from construction. Soil erosion is generally greatest during the initial clearing and is typically controlled with silt fences and/or other stormwater quality best management practices or revegetated immediately following construction.

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

### 4.7. Hydrology, Water Quality

Appropriate erosion and sedimentation controls will be employed during construction. Wetlands and other jurisdictional waters will not be affected.

Potential impacts from normal operation and maintenance activities at the living center include the introduction of petroleum-based products, pesticides, herbicides, and other chemicals for landscaping. The potential of pollutant loading would be prevented by impending source water protection BMPs, such as waste reduction and management strategies, proper use, handling, and disposal of chemicals, and a spill prevention control plant. A drainage control plan would also be implemented to contain and control surface water runoff from entering adjacent lands, and proper filtration measures and natural buffers will be implemented to prevent contamination of groundwater and nearby offsite water sources.

### 4.8. Land Use and Recreation

Land-use impacts from the proposed living center are determined by the amount of land displaced or converted by the actual project and by the compatibility of the living center to adjacent land uses. During construction, temporary impacts to land uses could occur due to the movement of workers and materials through the area. Construction noise and dust, as well as temporary disruption of traffic flow, may temporarily affect residents and businesses in the area of the project site. Currently low-density residential areas are present near the project area.

The proposed living center would have no impact on aviation operations. The tallest structures at the site would be either flagpoles or the living center itself. According to FAA Regulations, Part 77, notification of the construction of the site is required if any structures exceed height of an imaginary surface extending outward and upward at a slope of 100 to 1 for a horizontal distance of 20,000 feet from the nearest point of the nearest runway of a public or military airport have at least one runway longer than 3,200 feet. There are no public or military airports within the site vicinity (FAA 2008).

### 4.9. Noise

There is no State of Texas, county, or local noise limits or regulations. Construction activities would result in minimal short-term, local noise disturbances caused by heavy equipment operation on the site. Following construction completion, short-term noise disturbances would be caused by lawn-care equipment, visitor vehicles, and service/delivery vehicles. No adverse noise impacts are expected to result from construction or operation provided activities are limited to daylight hours.

### 4.10. Potential for Generating Substantial Controversy

No substantial controversy is expected to occur from the proposed community living center.

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

### **4.11. Real Property**

No direct change in land values adjacent to the site is expected. The land has been donated by the City of Houston to the Texas Veterans Land Board.

### **4.12. Socioeconomic Considerations**

For the proposed community living center, some short-term local employment would be generated. Employees working on the construction of the living center would benefit the local economy as a portion of the project wages would find their way into the local economy through purchases such as fuel, food, lodging, and building materials. The project implementation is expected to have a beneficial effect on economic activity since 140 to 160 permanent jobs would be generated. Due to the relatively small staffing requirement need, it is expected that employment associated with the living center would have a minimal effect on the population, housing, schools, community services, and other community amenities.

### **4.13. Environmental Justice**

This document is in compliance with the requirements of EO 12898 – Federal Action to Address EJ in Minority Populations and Low-Income Populations. The EO requires that minority and low-income population not receive disproportionately high or adverse human health or environmental effects. Should the proposed living center be constructed, the land use would be consistent with current land uses in the area and would not impinge upon the current lifestyles and habits of residents. Any activities that currently take place in the vicinity of the site would not be affected as a result of the proposed project. Therefore, no change in the quality of life of the local population is expected. The proposed project is not expected to add a disproportionately high or adverse human health or environmental effects on the community.

### **4.14. Environmental Health and Safety**

This document is also in compliance with the requirements of EO 13045 – Protection of Children from Environmental Health Risks and Safety Risks. The proposed project is not anticipated to disproportionately affect children or pose any such risks; therefore, consideration, in regards to this EO, for other effective and feasible alternatives to the planned action is not necessary.

### **4.15. Solid/Hazardous Waste**

A Phase I Initial Site Assessment (ISA) was completed in May of 2016. The ISA revealed no evidence of RECs in connection with the property.

### **4.16. Transportation/Traffic and Parking**

The main entrance to the proposed community living facility would be on Beltway 8 Frontage Road. Currently, there are no plans to add traffic signals or signs to Beltway 8 Frontage Road where the entrance to the living facility will be. The City of Houston agrees and commits to approve and provide or assist in the provision of traffic flow regulation aids such as traffic lights,

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

turn signals, traffic signs, and other measures as necessary to facilitate entry and departure from the proposed living center site consistent with the Texas Manual on Uniform Traffic Control Devices and Policies and Procedures of the City of Houston. Establishment of access points would be handled through the normal permit process of appropriate agency (TxDOT and/or the City of Houston). Minimal adverse impacts to traffic due to the construction of the living center are expected.

### **4.17. Utilities**

Utilities provided to the living center would include electric, water, sewer, and telephone services. Negligible impacts are expected to occur to surrounding areas as a result of utilities installation.

### **4.18. Vegetation**

The proposed project would entail the conversion of coastal prairie to a manicured, landscaped park-like setting. Permanent removal of some existing vegetation is anticipated. Reseeding with native grasses and planting of native shrubs and trees will occur on the property.

### **4.19. Wildlife**

The relative impacts of the project on wildlife would include short-term effects resulting from the physical disturbance during construction and long-term effects resulting from habitat modification. Permanent changes in vegetation type and vegetation structure from the existing condition may increase opportunities for many wildlife species, but decrease opportunities for others. Some wildlife species may be attracted to newly planted vegetation; however, some species may be displaced to adjacent offsite location as a result of permanent changes in the landscape and increase in human pressure.

Construction could result in short-term direct and/or indirect impacts to animals that reside or wander within the site. Heavy machinery may impact some small, low-mobility individuals. These could include species of amphibians, reptiles, and small mammals. Soil compaction caused by heavy machinery may similarly result in negative effects to fossorial mammals (i.e., those that live underground). Larger, more-mobile species, such as birds or larger mammals, may avoid the initial clearing and construction activities and move into adjacent areas outside the site.

Increased noise and activity levels during construction could potential disturb breeding or other activities of species inhabiting the areas adjacent to the site. However, these impacts would be temporary. Although the normal behavior of some individuals would be disturbed during construction, little long-term damage to the populations of such species would result.

The MBTA protects most North American bird species. The MBTA states that it is unlawful to kill, possess, pursue, hunt, take, capture, harass, or attempt to kill, possess, sell, purchase, deliver, export, import, transport, barter eggs, or any part thereof. Presidential EO 13186 calls for

# STATE VETERANS HOME - HOUSTON

## Environmental Assessment

renewed protection for migratory birds for projects that receive federal funds. In accordance with this policy, we recommend measures to ensure that the proposed living center construction would not result in negative effects to migratory birds. Construction activities would not likely disturb potential nesting sites on adjacent properties. Most birds nest between the months of April to August; however, in temperate climates, birds may nest outside of this period. Compliance with the MBTA would ensure that construction activities would not negatively affect protected bird species and no further mitigation is necessary.

The USFWS and TPWD provided information concerning the potential occurs and location of state and federally listed species near the project site. The creek chubsucker (*Erimyzon oblongus*), smalltooth sawfish (*Pristis pectinata*), Louisiana pigtoe (*Pleurobema riddellii*), sandbank pocketbook (*Lampsilis satura*), Texas pigtoe (*Fusconaia askewi*), alligator snapping turtle (*Macrochelys temminckii*), green sea turtle (*Chelonia mydas*), Kemp's Ridley sea turtle (*Lepidochelys kempii*), leatherback sea turtle (*Dermochelys coriacea*), loggerhead sea turtle (*Caretta caretta*), and West Indian manatee (*Trichechus manatus*) are aquatic species that are incapable of occurring on inland and/or terrestrial environments such as the project site. No impacts to these species are anticipated.

The American peregrine falcon, arctic peregrine falcon, bald eagle, brown pelican, red knot, red-cockaded woodpecker, white-faced ibis, whooping crane, and wood stork are all unlikely to regularly occur within the project site, except as rare migrants, vagrants, flyovers, or visitors to the general area. The white-tailed hawk has potential to regularly occur at the living center site and is covered under the MBTA (USFWS 2013). Intended compliance, as previously described, would ensure that construction activities would not negatively affected protected bird species with potential occurrence. Therefore, no impacts to protected avian species are anticipated.

The Houston toad was historically present in Harris County, but is believed to have been extirpated in the Houston area (Seal 1994). TXNDD lists an element of occurrence for the Houston toad 3.1 miles east of the project area; however this occurrence was in 1976 (**Exhibit 8**; TXNDD 2016). The red wolf is considered extinct in Texas. No elements of occurrence for the red wolf are listed in TXNDD. Therefore, no impacts to these species are anticipated.

The timber rattlesnake may potentially occur within the project site. Although potential exists for occurrence of the timber rattlesnake, no documented records of the species exist from the site or immediate vicinity (TXNDD 2016). Reptile Best Management Practices (BMPs), which include methods for protecting the timber rattlesnake, will be implemented during construction. Therefore, no impacts to the species are expected.

## 5. CUMULATIVE EFFECTS/ENVIRONMENTAL CONCLUSIONS

This EA has evaluated potential environmental effects resulting from construction and operation of the State Veterans Home - Houston. No significant cumulative effects on biological or socioeconomic resources are anticipated. The cultural resources assessment revealed no NRHP-

## STATE VETERANS HOME - HOUSTON Environmental Assessment

listed properties, SALs, OTHMs, RTLHs, cemeteries, or previously recorded archeological sites are within the proposed project area. Measures will be undertaken to avoid and minimize impacts, and as a result, mitigation measures are necessary with respect to the proposed action. Mitigation actions include air quality controls during construction, including emissions and dust suppression and water quality controls, such as a SWPPP, during construction. Upon completion, source water protection BMPs would be implemented during normal operations, landscaping upkeep, and periodic maintenance. Based on the current site development plans and this analysis, the construction and operation of the proposed facility should result in negligible effects.

The proposed construction does not require the preparation of an Environmental Impact Statement. Therefore, a Finding of No Significant Impact (FONSI) will be prepared and issued for approval.

**Species Lists**

## HARRIS COUNTY

### AMPHIBIANS

		Federal Status	State Status
<b>Houston toad</b>	<i>Anaxyrus houstonensis</i>	LE	E

endemic; sandy substrate, water in pools, ephemeral pools, stock tanks; breeds in spring especially after rains; burrows in soil of adjacent uplands when inactive; breeds February-June; associated with soils of the Sparta, Carrizo, Goliad, Queen City, Recklaw, Weches, and Willis geologic formations

<b>Southern Crawfish Frog</b>	<i>Lithobates areolatus areolatus</i>
-------------------------------	---------------------------------------

The Southern Crawfish Frog can be found in abandoned crawfish holes and small mammal burrows. This species inhabits moist meadows, pasturelands, pine scrub, and river flood plains. This species spends nearly all of its time in burrows and only leaves the burrow area to breed. Although this species can be difficult to detect due to its reclusive nature, the call of breeding males can be heard over great distances. Eggs are laid and larvae develop in temporary water such as flooded fields, ditches, farm ponds and small lakes. Habitat: Shallow water, Herbaceous Wetland, Riparian, Temporary Pool, Cropland/hedgerow, Grassland/herbaceous, Suburban/orchard, Woodland – Conifer.

### BIRDS

		Federal Status	State Status
<b>American Peregrine Falcon</b>	<i>Falco peregrinus anatum</i>	DL	T

year-round resident and local breeder in west Texas, nests in tall cliff eyries; also, migrant across state from more northern breeding areas in US and Canada, winters along coast and farther south; occupies wide range of habitats during migration, including urban, concentrations along coast and barrier islands; low-altitude migrant, stopovers at leading landscape edges such as lake shores, coastlines, and barrier islands.

<b>Arctic Peregrine Falcon</b>	<i>Falco peregrinus tundrius</i>	DL
--------------------------------	----------------------------------	----

migrant throughout state from subspecies' far northern breeding range, winters along coast and farther south; occupies wide range of habitats during migration, including urban, concentrations along coast and barrier islands; low-altitude migrant, stopovers at leading landscape edges such as lake shores, coastlines, and barrier islands.

<b>Bald Eagle</b>	<i>Haliaeetus leucocephalus</i>	DL	T
-------------------	---------------------------------	----	---

found primarily near rivers and large lakes; nests in tall trees or on cliffs near water; communally roosts, especially in winter; hunts live prey, scavenges, and pirates food from other birds

<b>Black Rail</b>	<i>Laterallus jamaicensis</i>
-------------------	-------------------------------

salt, brackish, and freshwater marshes, pond borders, wet meadows, and grassy swamps; nests in or along edge of marsh, sometimes on damp ground, but usually on mat of previous year's dead grasses; nest usually hidden in marsh grass or at base of Salicornia

<b>Brown Pelican</b>	<i>Pelecanus occidentalis</i>	DL
----------------------	-------------------------------	----

largely coastal and near shore areas, where it roosts and nests on islands and spoil banks

<b>Henslow's Sparrow</b>	<i>Ammodramus henslowii</i>
--------------------------	-----------------------------

wintering individuals (not flocks) found in weedy fields or cut-over areas where lots of bunch grasses occur along with vines and brambles; a key component is bare ground for running/walking

## HARRIS COUNTY

### BIRDS

Federal Status      State Status

**Mountain Plover**

*Charadrius montanus*

breeding: nests on high plains or shortgrass prairie, on ground in shallow depression; nonbreeding: shortgrass plains and bare, dirt (plowed) fields; primarily insectivorous

**Peregrine Falcon**

*Falco peregrinus*

DL

T

both subspecies migrate across the state from more northern breeding areas in US and Canada to winter along coast and farther south; subspecies (F. p. anatum) is also a resident breeder in west Texas; the two subspecies' listing statuses differ, F.p. tundrius is no longer listed in Texas; but because the subspecies are not easily distinguishable at a distance, reference is generally made only to the species level; see subspecies for habitat.

**Red Knot**

*Calidris canutus rufa*

T

Red knots migrate long distances in flocks northward through the contiguous United States mainly April-June, southward July-October. A small plump-bodied, short-necked shorebird that in breeding plumage, typically held from May through August, is a distinctive and unique pottery orange color. Its bill is dark, straight and, relative to other shorebirds, short-to-medium in length. After molting in late summer, this species is in a drab gray-and-white non-breeding plumage, typically held from September through April. In the non-breeding plumage, the knot might be confused with the omnipresent Sanderling. During this plumage, look for the knot's prominent pale eyebrow and whitish flanks with dark barring. The Red Knot prefers the shoreline of coast and bays and also uses mudflats during rare inland encounters. Primary prey items include coquina clam (*Donax* spp.) on beaches and dwarf surf clam (*Mulinia lateralis*) in bays, at least in the Laguna Madre. Wintering Range includes- Aransas, Brazoria, Calhoun, Cameron, Chambers, Galveston, Jefferson, Kennedy, Kleberg, Matagorda, Nueces, San Patricio, and Willacy. Habitat: Primarily seacoasts on tidal flats and beaches, herbaceous wetland, and Tidal flat/shore.

**Red-cockaded Woodpecker**

*Picoides borealis*

LE

E

cavity nests in older pine (60+ years); forages in younger pine (30+ years); prefers longleaf, shortleaf, and loblolly

**Snowy Plover**

*Charadrius alexandrinus*

formerly an uncommon breeder in the Panhandle; potential migrant; winter along coast

**Sprague's Pipit**

*Anthus spragueii*

only in Texas during migration and winter, mid September to early April; short to medium distance, diurnal migrant; strongly tied to native upland prairie, can be locally common in coastal grasslands, uncommon to rare further west; sensitive to patch size and avoids edges.

**White-faced Ibis**

*Plegadis chihi*

T

prefers freshwater marshes, sloughs, and irrigated rice fields, but will attend brackish and saltwater habitats; nests in marshes, in low trees, on the ground in bulrushes or reeds, or on floating mats

**White-tailed Hawk**

*Buteo albicaudatus*

T

near coast on prairies, cordgrass flats, and scrub-live oak; further inland on prairies, mesquite and oak savannas, and mixed savanna-chaparral; breeding March-May

## HARRIS COUNTY

### BIRDS

		Federal Status	State Status
<b>Whooping Crane</b>	<i>Grus americana</i>	LE	E

potential migrant via plains throughout most of state to coast; winters in coastal marshes of Aransas, Calhoun, and Refugio counties

<b>Wood Stork</b>	<i>Mycteria americana</i>		T
-------------------	---------------------------	--	---

forages in prairie ponds, flooded pastures or fields, ditches, and other shallow standing water, including salt-water; usually roosts communally in tall snags, sometimes in association with other wading birds (i.e. active heronries); breeds in Mexico and birds move into Gulf States in search of mud flats and other wetlands, even those associated with forested areas; formerly nested in Texas, but no breeding records since 1960

### FISHES

		Federal Status	State Status
<b>American eel</b>	<i>Anguilla rostrata</i>		

coastal waterways below reservoirs to gulf; spawns January to February in ocean, larva move to coastal waters, metamorphose, then females move into freshwater; most aquatic habitats with access to ocean, muddy bottoms, still waters, large streams, lakes; can travel overland in wet areas; males in brackish estuaries; diet varies widely, geographically, and seasonally

<b>Creek chubsucker</b>	<i>Erimyzon oblongus</i>		T
-------------------------	--------------------------	--	---

tributaries of the Red, Sabine, Neches, Trinity, and San Jacinto rivers; small rivers and creeks of various types; seldom in impoundments; prefers headwaters, but seldom occurs in springs; young typically in headwater rivulets or marshes; spawns in river mouths or pools, riffles, lake outlets, upstream creeks

<b>Smalltooth sawfish</b>	<i>Pristis pectinata</i>	LE	E
---------------------------	--------------------------	----	---

different life history stages have different patterns of habitat use; young found very close to shore in muddy and sandy bottoms, seldom descending to depths greater than 32 ft (10 m); in sheltered bays, on shallow banks, and in estuaries or river mouths; adult sawfish are encountered in various habitat types (mangrove, reef, seagrass, and coral), in varying salinity regimes and temperatures, and at various water depths, feed on a variety of fish species and crustaceans

### MAMMALS

		Federal Status	State Status
<b>Louisiana black bear</b>	<i>Ursus americanus luteolus</i>	LT	T

possible as transient; bottomland hardwoods and large tracts of inaccessible forested areas

<b>Plains spotted skunk</b>	<i>Spilogale putorius interrupta</i>		
-----------------------------	--------------------------------------	--	--

catholic; open fields, prairies, croplands, fence rows, farmyards, forest edges, and woodlands; prefers wooded, brushy areas and tallgrass prairie

<b>Rafinesque's big-eared bat</b>	<i>Corynorhinus rafinesquii</i>		T
-----------------------------------	---------------------------------	--	---

roosts in cavity trees of bottomland hardwoods, concrete culverts, and abandoned man-made structures

<b>Red wolf</b>	<i>Canis rufus</i>	LE	E
-----------------	--------------------	----	---

extirpated; formerly known throughout eastern half of Texas in brushy and forested areas, as well as coastal prairies

## HARRIS COUNTY

### MAMMALS

		Federal Status	State Status
<b>Southeastern myotis bat</b>	<i>Myotis austroriparius</i>		
roosts in cavity trees of bottomland hardwoods, concrete culverts, and abandoned man-made structures			

### MOLLUSKS

		Federal Status	State Status
<b>Louisiana pigtoe</b>	<i>Pleurobema riddellii</i>		T
streams and moderate-size rivers, usually flowing water on substrates of mud, sand, and gravel; not generally known from impoundments; Sabine, Neches, and Trinity (historic) River basins			
<b>Sandbank pocketbook</b>	<i>Lampsilis satura</i>		T
small to large rivers with moderate flows and swift current on gravel, gravel-sand, and sand bottoms; east Texas, Sulfur south through San Jacinto River basins; Neches River			
<b>Texas pigtoe</b>	<i>Fusconaia askewi</i>		T
rivers with mixed mud, sand, and fine gravel in protected areas associated with fallen trees or other structures; east Texas River basins, Sabine through Trinity rivers as well as San Jacinto River			

### REPTILES

		Federal Status	State Status
<b>Alligator snapping turtle</b>	<i>Macrochelys temminckii</i>		T
perennial water bodies; deep water of rivers, canals, lakes, and oxbows; also swamps, bayous, and ponds near deep running water; sometimes enters brackish coastal waters; usually in water with mud bottom and abundant aquatic vegetation; may migrate several miles along rivers; active March-October; breeds April-October			
<b>Green sea turtle</b>	<i>Chelonia mydas</i>	LT	T
Gulf and bay system; shallow water seagrass beds, open water between feeding and nesting areas, barrier island beaches; adults are herbivorous feeding on sea grass and seaweed; juveniles are omnivorous feeding initially on marine invertebrates, then increasingly on sea grasses and seaweeds; nesting behavior extends from March to October, with peak activity in May and June			
<b>Kemp's Ridley sea turtle</b>	<i>Lepidochelys kempii</i>	LE	E
Gulf and bay system, adults stay within the shallow waters of the Gulf of Mexico; feed primarily on crabs, but also snails, clams, other crustaceans and plants, juveniles feed on sargassum and its associated fauna; nests April through August			
<b>Leatherback sea turtle</b>	<i>Dermochelys coriacea</i>	LE	E
Gulf and bay systems, and widest ranging open water reptile; omnivorous, shows a preference for jellyfish; in the US portion of their western Atlantic nesting territories, nesting season ranges from March to August			
<b>Loggerhead sea turtle</b>	<i>Caretta caretta</i>	LT	T
Gulf and bay system primarily for juveniles, adults are most pelagic of the sea turtles; omnivorous, shows a preference for mollusks, crustaceans, and coral; nests from April through November			

## HARRIS COUNTY

### REPTILES

		Federal Status	State Status
<b>Texas horned lizard</b>	<i>Phrynosoma cornutum</i>		T
open, arid and semi-arid regions with sparse vegetation, including grass, cactus, scattered brush or scrubby trees; soil may vary in texture from sandy to rocky; burrows into soil, enters rodent burrows, or hides under rock when inactive; breeds March-September			
<b>Timber rattlesnake</b>	<i>Crotalus horridus</i>		T
swamps, floodplains, upland pine and deciduous woodlands, riparian zones, abandoned farmland; limestone bluffs, sandy soil or black clay; prefers dense ground cover, i.e. grapevines or palmetto			

### PLANTS

		Federal Status	State Status
<b>Awnless bluestem</b>	<i>Bothriochloa exaristata</i>		
GLOBAL RANK: G4; Coastal prairies on black clay; Perennial; Flowering April-Dec; Fruiting April- Dec			
<b>Coastal gay-feather</b>	<i>Liatris bracteata</i>		
Texas endemic; coastal prairie grasslands of various types, from salty prairie on low- lying somewhat saline clay loams to upland prairie on nonsaline clayey to sandy loams; flowering in fall			
<b>Giant sharpstem umbrella-sedge</b>	<i>Cyperus cephalanthus</i>		
in Texas on saturated, fine sandy loam soils, along nearly level fringes of deep prairie depressions; also in depressional area within coastal prairie remnant on heavy black clay; in Louisiana, most sites are coastal prairie on poorly drained sites, some on slightly elevated areas surrounded by standing shallow water, and on moderately drained sites; soils include very strongly acid to moderately alkaline silt loams and silty clay loams; flowering/fruitleting May-June, August-September, and possibly other times in response to rainfall			
<b>Goldenwave tickseed</b>	<i>Coreopsis intermedia</i>		
GLOBAL RANK: G3; In deep sandy soils of sandhills in openings in or along margins of post oak woodlands and pine-oak forests of east Texas; Perennial; Flowering/Fruiting May-Aug			
<b>Houston daisy</b>	<i>Rayjacksonia aurea</i>		
Texas endemic; on and around naturally barren or sparsely vegetated saline slick spots or pimple mounds on coastal prairies, usually on sandy to sandy loam soils, occasionally in pastures and on roadsides in similar soil types where mowing may mimic natural prairie disturbance regimes; flowering late September-November (-December)			
<b>Indianola beakrush</b>	<i>Rhynchospora indianolensis</i>		
GLOBAL RANK: G3Q; Locally abundant in cattle pastures in some areas (at least during wet years), possibly becoming a management problem in such sites; Perennial; Flowering/Fruiting April-Nov			
<b>Panicled indigobush</b>	<i>Amorpha paniculata</i>		
A stout shrub, 3 m (9 ft) tall that grows in acid seep forests, peat bogs, wet floodplain forests, and seasonal wetlands on the edge of Saline Prairies in East Texas. It is distinguished from other Amorpha species by its fuzzy leaflets with prominent raised veins underneath, and the flower panicles, which are 8 to 16 inches long and slender, held above the foliage. Perennial; Flowering summer			

## HARRIS COUNTY

### PLANTS

Federal Status

State Status

**Texas ladies'-tresses**

*Spiranthes brevilabris* var. *brevilabris*

Sandy soils in moist prairies, incl. blackland/Fleming prairies, calcareous prairie pockets surrounded by pines, pine-hardwood forest, open pinelands, wetland pine savannahs/flatwoods, and dry to moist fields, meadows, and roadsides. Delicate, nearly ephemeral orchid, producing winter rosettes, flowers Feb-Apr. Historically endemic to SE coastal plain.

**Texas meadow-rue**

*Thalictrum texanum*

Texas endemic; mostly found in woodlands and woodland margins on soils with a surface layer of sandy loam, but it also occurs on prairie pimple mounds; both on uplands and creek terraces, but perhaps most common on claypan savannas; soils are very moist during its active growing season; flowering/fruiting (January-)February-May, withering by midsummer, foliage reappears in late fall(November) and may persist through the winter

**Texas prairie dawn**

*Hymenoxys texana*

LE

E

Texas endemic; in poorly drained, sparsely vegetated areas (slick spots) at the base of mima mounds in open grassland or almost barren areas on slightly saline soils that are sticky when wet and powdery when dry; flowering late February-early April

**Texas tauschia**

*Tauschia texana*

GLOBAL RANK: G3; Occurs in loamy soils in deciduous forests or woodlands on river and stream terraces; Perennial; Flowering/Fruiting Feb-April

**Texas windmill-grass**

*Chloris texensis*

Texas endemic; sandy to sandy loam soils in relatively bare areas in coastal prairie grassland remnants, often on roadsides where regular mowing may mimic natural prairie fire regimes; flowering in fall

**Threeflower broomweed**

*Thurovia triflora*

Texas endemic; near coast in sparse, low vegetation on a veneer of light colored silt or fine sand over saline clay along drier upper margins of ecotone between between salty prairies and tidal flats; further inland associated with vegetated slick spots on prairie mima mounds; flowering September-November

Re: Texas State Veterans' Community Living Center in Houston, Texas

Dear [Addressee]:

The Texas Veterans' Land Board (VLB) is proposing to build a community living center in Houston, Texas to serve eligible veterans in Texas. The community living center would serve a veteran population of approximately 296,100. The proposed 18-acre site is located in Harris County, within Houston city limits, north of the intersection of Beltway 8 Frontage Road and Cottingham Street (see attached figure). The proposed site is currently undeveloped.

Pape-Dawson Engineers, Inc. is preparing an Environmental Assessment to evaluate the impacts of the proposed living center and comply with the requirements of the National Environmental Policy Act. Pape-Dawson is currently in the process of collecting and evaluating environmental data for the proposed community living center site. As a part of this effort, we are requesting that your agency/office relay any concerns or relevant information that you may have regarding the potential environmental effects from construction of the community living center. Pape-Dawson would greatly appreciate receiving your comments regarding natural, cultural, or human resources of the proposed living center site that are of concern to your agency/office.

Your comments will be an important consideration in the assessment of impacts. In addition, should you identify any area requiring permits, easements, or other approvals by your agency/office, or if you are aware of any major proposed development or construction in the area, we would also appreciate receiving this information. If you have any questions concerning the proposed project or our request for information, please call Valerie Collins at 210-375-9000. Your earliest reply would be most appreciated.

Sincerely,  
Pape-Dawson Engineers, Inc.

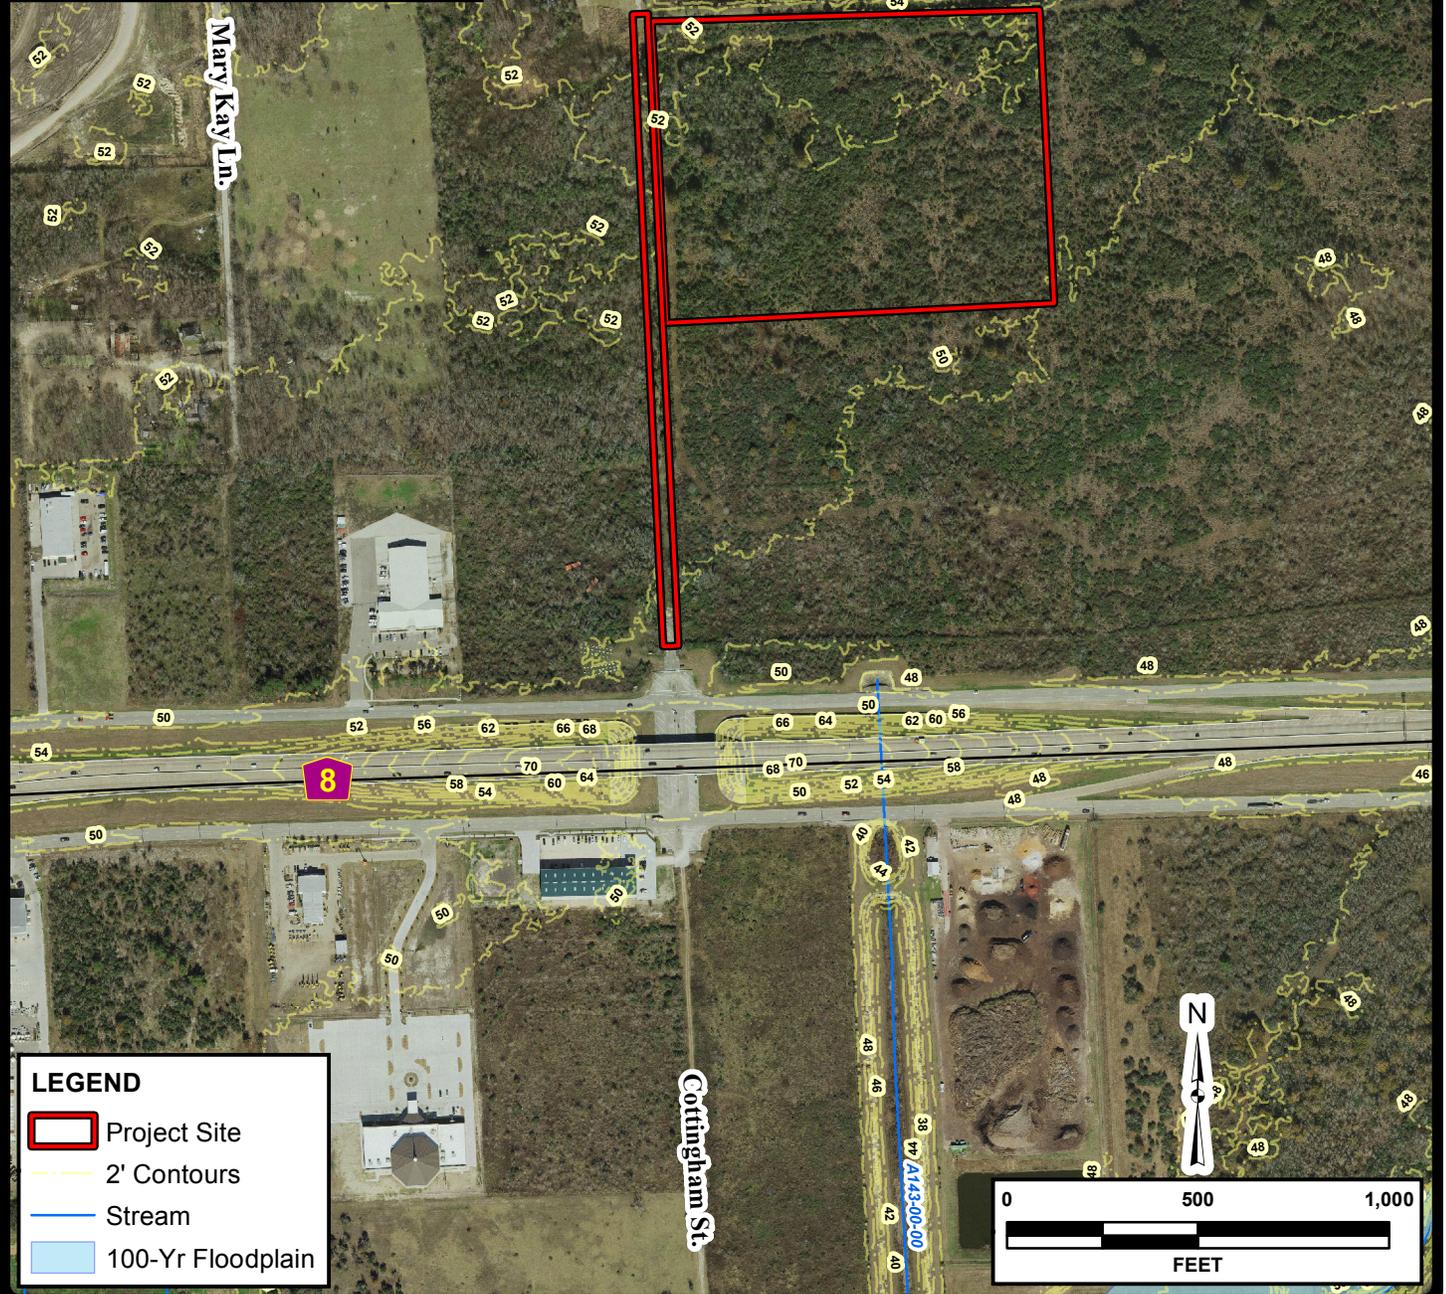

Valerie Collins, AICP  
Sr. Environmental Manager

Re: Project review under the Antiquities Code of Texas  
18.19-Acre Texas State Veterans Home Project, Harris County, Texas  
Texas Antiquities Permit Application #7651

Dear Colleague:

Thank you for your Antiquities Permit Application for the above referenced project. This letter presents the final copy of the permit from the Executive Director of the Texas Historical Commission (THC), the state agency responsible for administering the Antiquities Code of Texas.

Please keep this copy for your records. The Antiquities Permit investigations requires the production and submittal of one printed copy of the final report, a completed abstract form submitted via our online system, two copies of the tagged PDF final report on CD (one with site location information & one without), and verification that any artifacts recovered and records produced during the investigations are curated at the repository listed in the permit. The abstract form may be submitted via the THC website ([www.thc.state.tx.us](http://www.thc.state.tx.us)) or use url: <http://xapps.thc.state.tx.us/Abstract/login.aspx> Additionally, you must send the THC shapefiles showing the boundaries of the project area *and* the areas actually surveyed via email to [archeological\\_projects@thc.state.tx.us](mailto:archeological_projects@thc.state.tx.us).

If you have any questions concerning this permit or if we can be of further assistance, please contact Lillie Thompson at 512/463-1858. The reviewer for this project is Bill Martin, 512/463-6096.

Sincerely,

for  
Mark Wolfe  
Executive Director

---

*Scope of Work under this permit shall consist of:*

---

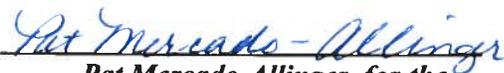

**An intensive pedestrian archaeological survey with shovel testing of high probability areas that meets or exceeds the State Archeological Survey Standards for Texas. This includes, subsurface shovel testing of pedestrian survey transects and mechanical testing in appropriate alluvial areas. For details, see research design submitted with permit application.**

**ARCHEOLOGY PERMIT # 7651**

**This permit is granted on the following terms and conditions:**

- 1) This project must be carried out in such a manner that the maximum amount of historic, scientific, archeological, and educational information will be recovered and preserved and must include the scientific, techniques for recovery, recording, preservation and analysis commonly used in archeological investigations. All survey level investigations must follow the state survey standards and the THC survey requirements established with the projects sponsor(s).
- 2) The Principal Investigator/Investigation Firm, serving for the Owner/Permittee and/or the Project Sponsor, is responsible for insuring that specimens, samples, artifacts, materials and records that are collected as a result of this permit are appropriately cleaned, and cataloged for curation. These tasks will be accomplished at no charge to the Commission, and all specimens, artifacts, materials, samples, and original field notes, maps, drawings, and photographs resulting from the investigations remain the property of the State of Texas, or its political subdivision, and must be curated at a certified repository. Verification of curation by the repository is also required, and duplicate copies of any requested records shall be furnished to the Commission before any permit will be considered complete.
- 3) The Principal Investigator/Investigation Firm serving for the Owner/Permittee, and/or the Project Sponsor is responsible for the publication of results of the investigations in a thorough technical report containing relevant descriptions, maps, documents, drawings, and photographs. A draft copy of the report must be submitted to the Commission for review and approval. Any changes to the draft report requested by the Commission must be made or addressed in the report, or under separate written response to the Commission. Once a draft has been approved by the Commission, one (1) printed, unbound copy of the final report containing at least one map with the plotted location of any and all sites recorded and two copies of the report in tagged PDF format on an archival quality CD or DVD shall be furnished to the commission. One copy must include the plotted location of any and all sites recorded and the other should not include the site location data. A paper copy and an electronic copy of the completed Abstracts in Texas Contract Archeology Summary Form must also be submitted with the final report to the Commission. (Printed copies of forms are available from the Commission or also online at [www.thc.state.tx.us](http://www.thc.state.tx.us).)
- 4) If the Owner/Permittee, Project Sponsor or Principal Investigator/Investigation Firm fails to comply with any of the Commission's Rules of Practice and Procedure or with any of the specific terms of this permit, or fails to properly conduct or complete this project within the allotted time, the permit will fall into default status. A notification of Default status shall be sent to the Principal Investigator/Investigation Firm, and the Principal Investigator will not be eligible to be issued any new permits until such time that the conditions of this permit are complete or, if applicable, extended.
- 5) The Owner/Permittee, Project Sponsor, and Principal Investigator/Investigation Firm, in the conduct of the activities hereby authorizes, must comply with all laws, ordinances and regulations of the State of Texas and of its political subdivisions including, but not limited to, the Antiquities Code of Texas; they must conduct the investigation in such a manner as to afford protection to the rights of any and all lessees or easement holders or other persons having an interest in the property and they must return the property to its original condition insofar as possible, to leave it in a state which will not create hazard to life nor contribute to the deterioration of the site or adjacent lands by natural forces.
- 6) Any duly authorized and empowered representative of the Commission may, at any time, visit the site to inspect the fieldwork as well as the field records, materials, and specimens being recovered.
- 7) For reasons of site security associated with historical resources, the Project Sponsor (if not the Owner/Permittee), Principal Investigator, Owner, and Investigation Firm shall not issue any press releases, or divulge to the news media, either directly or indirectly, information regarding the specific location of, or other information that might endanger those resources, or their associated artifacts without first consulting with the Commission, and the State agency or political subdivision of the State that owns or controls the land where the resource has been discovered.
- 8) This permit may not be assigned by the Principal Investigator/Investigation Firm, Owner/Permittee, or Project Sponsor in whole, or in part to any other individual, organization, or corporation not specifically mentioned in this permit without the written consent of the Commission.
- 9) Hold Harmless: The Owner/Permittee hereby expressly releases the State and agrees that Owner/Permittee will hold harmless, indemnify, and defend (including reasonable attorney's fees and cost of litigation) the State, its officers, agents, and employees in their official and/or individual capacities from every liability, loss, or claim for damages to persons or property, direct or indirect of whatsoever nature arising out of, or in any way connected with, any of the activities covered under this permit. The provisions of this paragraph are solely for the benefit of the State and the Texas Historical Commission and are not intended to create or grant any rights, contractual or otherwise, to any other person or entity.
- 10) Addendum: The Owner/Permittee, Project Sponsor and Principal Investigator/Investigation Firm must abide by any addenda hereto attached.

**Upon a finding that it is in the best interest of the State, this permit is issued on 05/16/2016.**

## Abstract

At the request of Orcutt Winslow Architects, Pape-Dawson conducted an intensive archaeological survey for the proposed 18.19-acre (7.36- hectare [ha]) development for the Texas State Veterans Home situated on lands owned by the General Land Office (GLO) in Houston, Harris County, Texas. The proposed project would include the construction of a state veterans home and its associated driveways, parking lots, and utility installations. The roughly rectangular area of potential effects (APE) is along Cottingham Road (Future MLK Boulevard [Blvd.]) and about 815 feet (ft) (248 meter [m]) south of the roadway's intersection with Schurmier Road. State Highway Beltway 8 (BW8) is approximately 943 ft (287 m) to the south of the APE, which is maximally 1,016 ft (310 m) east to west and 829 ft (253 m) north to south.

Since the APE is owned by the GLO, a political subdivision of the state, compliance with the Antiquities Code of Texas (ACT) is necessary. It is anticipated that the U.S. Department of Veterans Affairs (VA) will provide funding for this project; therefore, compliance with Section 106 of the National Historic Preservation Act (NHPA) (Title 36 Code of Federal Regulations Part 800.4 [36 CFR 800.4]) is also necessary. The purpose of the investigations was to identify all historic or prehistoric cultural resources located within the APE and to evaluate the significance and eligibility of identified resources for inclusion to the National Register of Historic Places (NRHP) and for designation as State Antiquities Landmarks (SALs). All work was done in accordance with the archaeological survey standards and guidelines as developed by the Council of Texas Archaeologists (CTA) and adopted by the Texas Historical Commission (THC).

The intensive pedestrian survey was conducted by Pape-Dawson archeologists on May 25, 2016. The APE was subject to visual inspection supplemented by judgmentally placed shovel tests in order to evaluate the impact of the proposed project on archeological resources. This work was conducted under Texas Antiquities Permit No. 7651. A total of 12 shovel tests were excavated, exceeding the minimum archeological survey standards established by the CTA/THC. All shovel tests were negative for archeological material. No artifacts were collected, and all project records and photographs will be curated at Texas Archeological Research Laboratory at The University of Texas at Austin.

No archeological sites were previously recorded at this location and none were identified during the current survey. In accordance with 36 CFR 800.4, Pape-Dawson has made a reasonable and good faith effort to identify archaeological historic properties within the APE. As no properties were identified that meet the criteria for listing in the NRHP according to 36 CFR 60.4 or for designation as an SAL according to 13 TAC 26.12, Pape-Dawson recommends no further work.

## Management Summary

Orcutt Winslow Architects proposes to develop an 18.19-acre (7.36-ha) community for a Texas State Veterans Home situated on lands owned by the GLO in Houston, Harris County, Texas. The proposed project would include the construction of a state veterans home and its associated driveways, parking lots, and utility installations. The roughly rectangular APE is along Cottingham Road (Future MLK Blvd.) and about 815 feet (ft) (248 m) south of the roadway's intersection with Schurmier Road. BW8 is about 943 ft (287 m) to the south of the APE, which is maximally 1,016 ft (310 m) east to west and 829 ft (253 m) north to south.

Since the APE is owned by the GLO, a political subdivision of the state, compliance with the ACT will be necessary. It is anticipated that the VA will provide funding for this project; therefore, compliance with Section 106 of the NHPA (36 CFR 800.4) is necessary. The purpose of the investigations was to identify all historic or prehistoric cultural resources located within the APE and to evaluate the significance and eligibility of identified resources for inclusion to the NRHP. All work was done in accordance with the archaeological survey standards and guidelines as developed by the CTA/THC.

Pape-Dawson archaeologists conducted an archeological investigation of the proposed APE on May 25, 2016. Virginia Moore was the Principal Investigator, Alemea Young was the Project Archaeologist, and Katie Hill served as the field crew with a combined 12 person hours spent in the field. No cultural resources were observed during the survey efforts, and no archaeological sites were recorded. Therefore, it is recommended that no further archaeological work is necessary for the proposed undertaking and that the project be allowed to proceed.

## **Introduction**

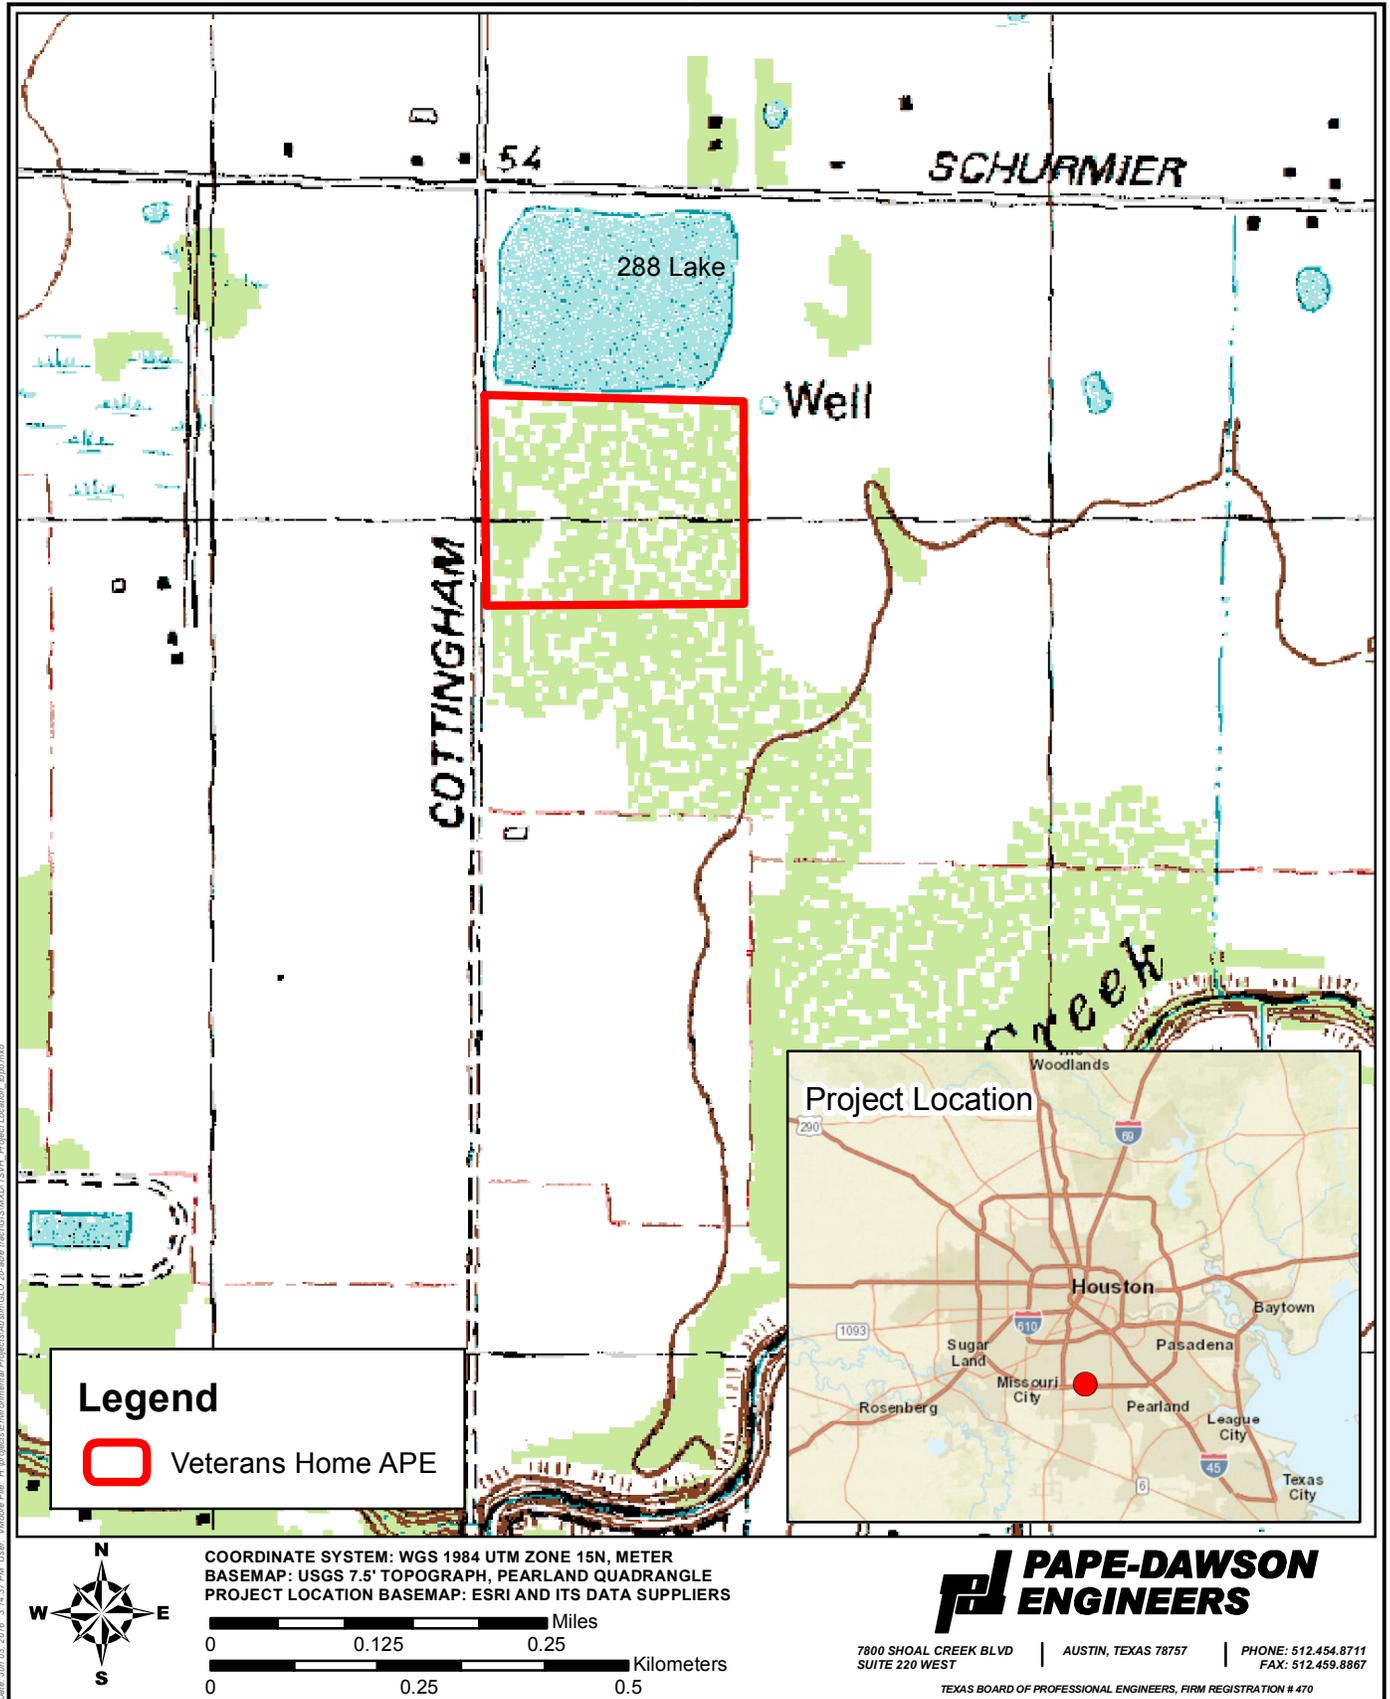

Orcutt Winslow Architects proposes to develop the Texas State Veterans Home on a 18.19-acre (7.36-hectare [ha]) tract of land owned by the General Land Office (GLO) in Houston, Harris County, Texas (Figures 1 and 2). The proposed development would include the construction of a state veterans home and its associated driveways, parking lots, and utility installations. The roughly rectangular area of potential effects (APE) is along Cottingham Road (Future MLK Boulevard [Blvd.]) and about 815 feet (ft) (248 meter [m]) south of the roadway's intersection with Schurmier Road. State Highway Beltway 8 (BW8) is about 943 ft (287 m) to the south of the APE, which is maximally 1,016 ft (310 m) east to west and 829 ft (253 m) north to south.

Since this APE is owned by the GLO, a political subdivision of the state, compliance with the Antiquities Code of Texas (ACT) will be necessary. It is anticipated that the U.S. Department of Veterans Affairs (VA) will provide funding for this project; therefore, compliance with Section 106 of the National Historic Preservation Act (NHPA) (Title 36 Code of Federal Regulations Part 800.4 [36 CFR 800.4]) is necessary. Pape-Dawson archaeologists obtained Texas Antiquities Permit No. 7651 prior to initiating the field effort. All work was done in accordance with the archaeological survey standards and guidelines as developed by the Council of Texas Archaeologists (CTA) and adopted by the Texas Historical Commission (THC).

At the request of Orcutt Winslow Architects, an intensive archeological survey was performed by Pape-Dawson for the proposed Texas State Veterans Home project. Fieldwork took place on May 25, 2016. Virginia Moore served as Principal Investigator and was assisted in the field by Alemea Young and Katie Hill. The goals of the investigation were to (1) locate all prehistoric and historic archeological sites, if present, within the APE; (2) establish vertical and horizontal site boundaries, as appropriate with respect to the boundaries of the APE; (3) evaluate the significance of recorded sites with regard to eligibility for listing on the National Register of Historic Places (NRHP) and for designation as a State Antiquities Landmark (SAL).

## **Project Setting**

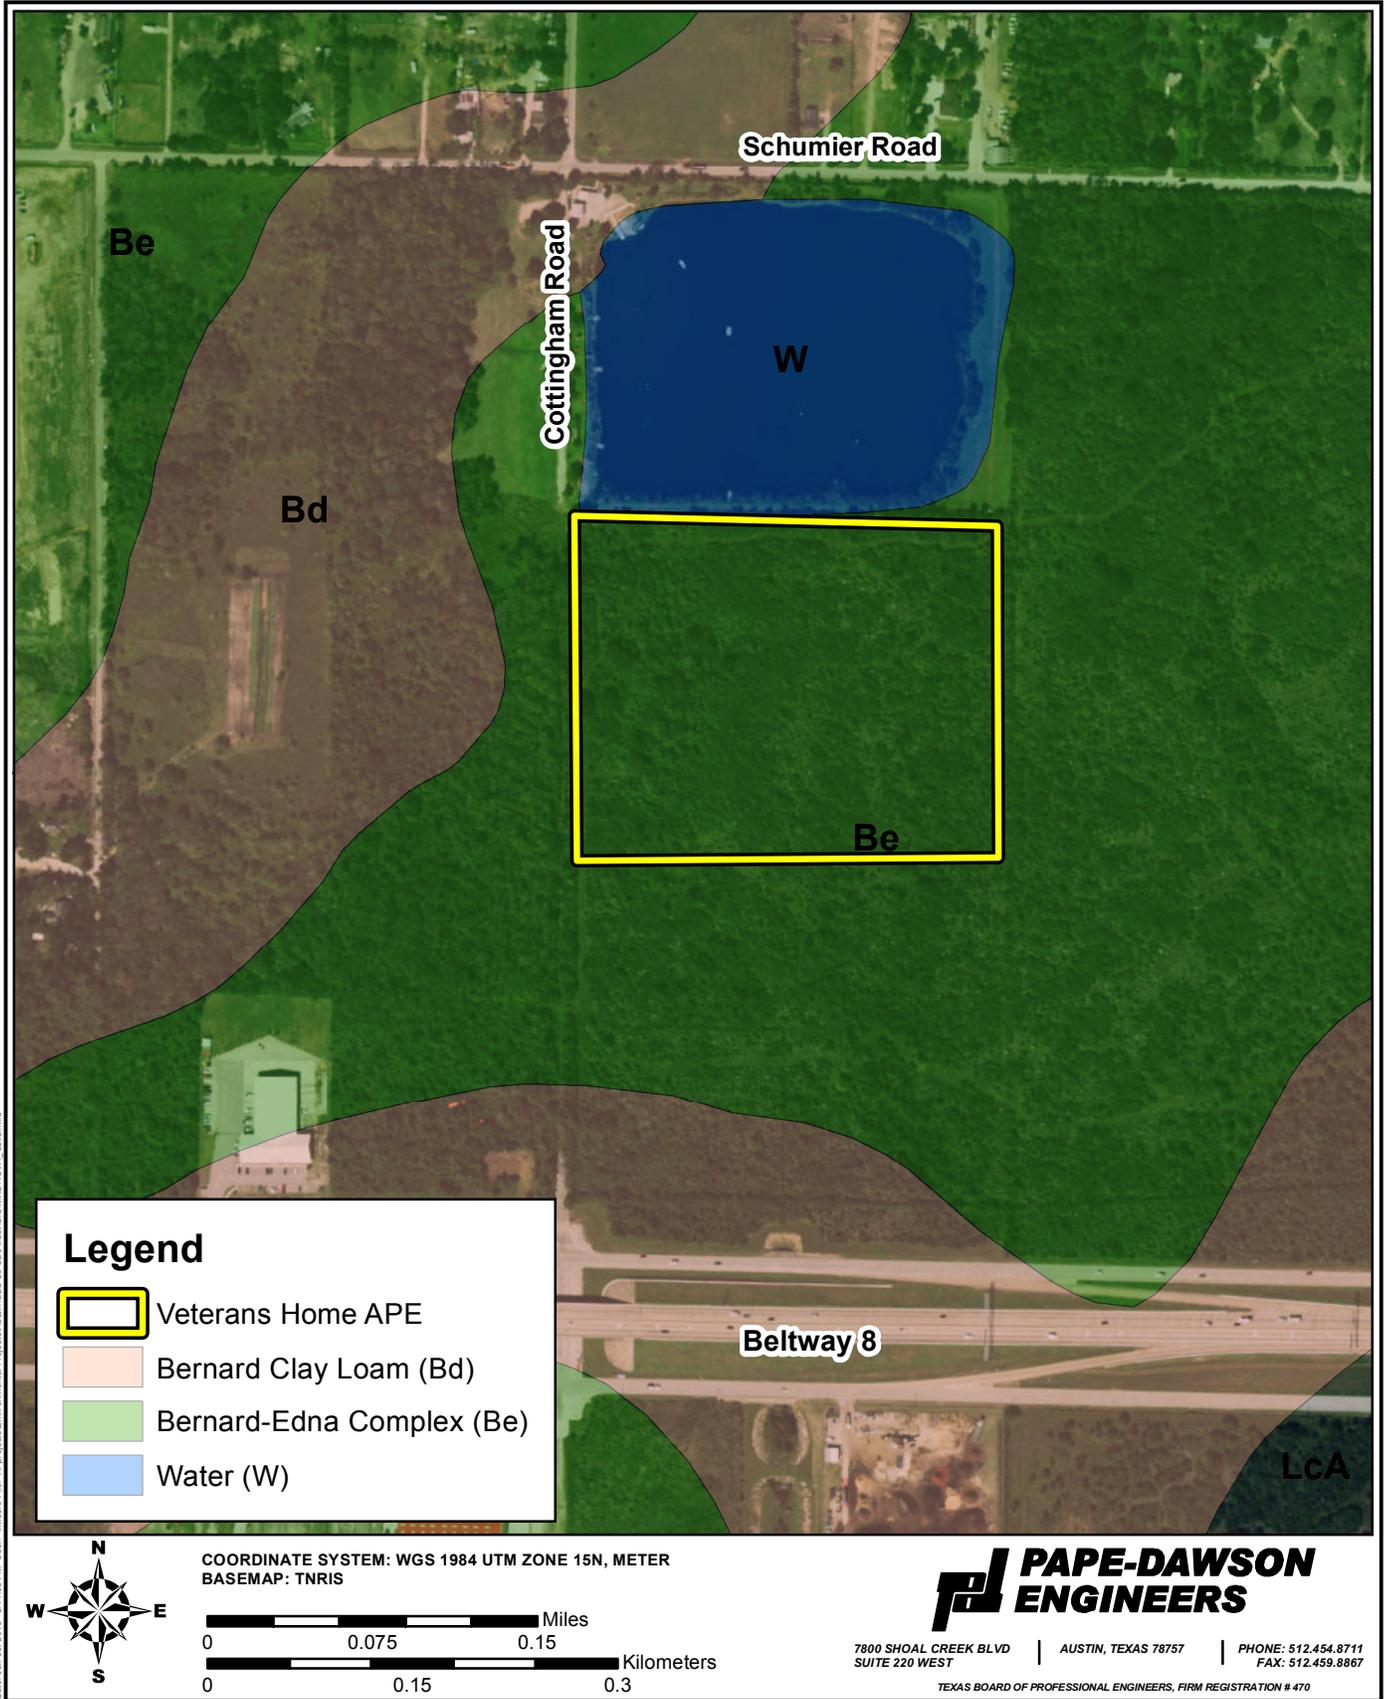

The APE is situated in northwest Pearland, just north of BW8 (also known as Sam Houston Parkway). A review of historic and modern topographic maps and aeriels suggests that the APE was open prairie or cleared pasture by 1953 and did not become completely overgrown until the late 2000s (Nationwide Environmental Title Research [NETR] 2016). Located in the Gulf Coastal Plains physiographic region (Wermund 1996), the APE is within the Clear Creek drainage. The Texas Coastal Plain is a low, level to gently sloping region extending from Florida to Mexico, as far north as the Ouachita uplift in Oklahoma, and as far west as the Balcones escarpment. The project APE is geologically mapped as Pleistocene-age Beaumont Formation, which is comprised of clay, silt and sand with some areas of predominately clay with low permeability, while other areas are mostly clayey sand and silt with moderate permeability and drainage (Barnes 1982).

**Figure 1 : Project Location - Topographic Map**

**Figure 2 : Project Location - Aerial Image**

**Figure 3 : Soils in APE**

The soils that formed within these Pleistocene-age deposits in the APE belong to the Bernard-Edna Complex (Be) and the Bernard (Bd) series. The predominant soil within the APE is mapped as the Bernard-Edna Complex with 0 to 1 percent slopes. The Bernard-Edna series consist of very deep and somewhat poorly drained soils that formed in either clayey or loamy fluviomarine deposits derived from igneous, metamorphic and sedimentary rock. These soils are on flat coastal plains and ancient meander ridges. The typical profile of these soils is clay loam at depths from 0 to 6 inches (0 to 15 centimeters [cm]) and clay from 6 to 65 inches (15 to 165 cm) (U.S. Department of Agriculture [USDA] 2016). According to Abbott (2001: Table 2) this soil is an upland, ancient (pre-Holocene) alluvium with a low potential or likelihood to contain buried prehistoric sites.

## **Cultural Chronology of Southeast Texas**

Cultural developments in this region are typically classified by archaeologists according to four primary chronological time periods: Paleoindian, Archaic, Late Prehistoric, and Historic. These classifications have been defined primarily by changes in material culture and subsistence strategies over time as evidenced through information and artifacts recovered from archaeological sites. In addition, they roughly correspond to patterns of environmental change as described by Aten (1983): The Late Glacial environment (12,000-9000 years B.P.), post-Pleistocene (9000-3000 B.P.), and relatively modern environmental conditions which developed approximately 3000 B.P.

### *Paleoindian Period (11,500 B.P.– 8,800 B.P.)*

The Paleoindian period, generally accepted as the earliest cultural period of the Americas, straddles the end of the Pleistocene era and the beginning of the Holocene. This period is alternatively known as the time of the “Big Game Hunting” tradition, due to the exploitation of now-extinct species of Pleistocene megafauna such as mastodon, mammoth, bison, horse, and camel. However, few megafaunal assemblages have been found in association with Paleoindian sites in Texas and it is thought that Paleoindian peoples probably largely subsisted on a wide range of plants and small game (Patterson 1995). Coastal Paleoindian sites represent inland occupations as the coastline during this time extended 30-40 km beyond its present day location (Ricklis 2004). Generally, temporal associations are based on stone tool assemblages including unifacial side scrapers, graters, and lanceolate projectile points. A number of Paleoindian points; Clovis, Scottsbluff, Plainview, Angostura, San Patrice and Meserve points, have been found in Harris County.

### *Archaic Period (8,800 B.P. – 1,200 B.P.)*

The beginning of the Archaic Period coincides with the termination of the Wisconsin Glacial period characterized by warmer temperatures, rising sea levels, and the extinction of Pleistocene megafauna. This period is divided into three sub-periods: Early, Middle, and Late. Very few Early Archaic (8,800 B.P. to 5,000 B.P.) sites have been identified in the region possibly due to lower population densities during this transitional period, though since sea levels had not reached modern levels by this time, it is probable that coastal sites associated with the Early Archaic are underwater and/or deeply buried. Those Early Archaic sites identified tend to be located along the inner coastal plain (Story 1990). The changing environmental conditions during this period were the impetus for a growing new ecosystem

exploited by early inhabitants of the region who are thought to have relied heavily upon the hunting of smaller animals, gathering of plant resources, and the exploitation of marine resources. As demonstrated by a number of shell middens dating to this period documented in the middle Texas Gulf Coast (Ricklis 2004). As diets changed, so did the stone tool technology used to procure and process these new plants and animals. In general, Archaic people began to make their projectile points with stems and points as the lanceolate form fell from use. These changes in stone tool technology are evident on the Early Archaic points found in the region: Bell, Trinity, and Carrolton points (Patterson 1995).

It is postulated that during the Middle Archaic (5,000 to 3,000 B.P.), population increases and the ubiquitous variety of artifact assemblages denote emerging social and exchange relationships based on group territoriality (Aten 1983) and some limiting of group mobility. New points associated with this expansion in technology include Bulverde, Lange, Pedernales, Williams, and Travis. Middle Archaic sites are more frequent along the coast and shell middens are an important expression of subsistence activities during this period. Organized mortuary practices first appear at this time in the western part of southeast Texas, though it did not reach full development until the Late Archaic (Ricklis 2004)

During the Late Archaic (3,000 to 1,200 B.P.), population increased significantly, as evidenced by an increase in the number of sites as well as intra-site artifacts (Aten 1982). This corresponds to the development of modern climactic conditions leading to the stabilization of sea levels, and expansion of coastal woodlands. Hall (1981) noted the development of trade with Woodland cultures to the east during the Late Archaic as seen in the various artifact assemblages from multiple sites in the region. Limited evidence suggests a settlement system for the Late Archaic which may have included a seasonal round with group dispersal in coastal areas during summer months (Aten 1983). However, the occurrence of shell middens at Late Archaic sites is not as common as at later sites (Patterson 1995). Cemeteries located along major streams from this period seem to indicate a higher degree of territoriality (Story 1985). Projectile points diagnostic of Late Archaic occupations include Gary, Kent, Yarbrough, Ellis, Darl, Fairland, Palmillas, and Refugio types (Patterson 1995).

#### *Late Prehistoric (1,200 B.P. – 250 B.P.)*

The Late Prehistoric Period spans the period from the introduction of ceramics to after the arrival of Europeans. Following Wheat's (1953) observations in Addicks Reservoir, the period has been termed the Early Ceramic and the Late Ceramic. Notable innovations during this period include the development of the development of ceramics. The period is characterized by the appearance of sandy-paste pottery across the region referred to as the Mossy Grove Tradition (Aten 1983, Story 1990). The primary characterization of this tradition is the plain, sandy-paste Goose Creek pottery found in this region from the Early Ceramic through Early Historic periods (Story 1990). Another important innovation was the development of the bow and arrow. However, Patterson (1995) postulates that the bow and arrow were in use in Southeast Texas as early as the Middle Archaic. Stone tool technology evolved in step with this new innovation and Late Prehistoric people made their stone points smaller and more diverse in form depending on the game animals hunted. Some of these stone arrow points include Edwards, Scallorn, Zavala, Perdiz, Cuney, Padre and Alba types. Settlement patterns shifted during this time as sedentary and horticultural communities became more common. With the emergence of social and ritual

ceremonies, and more defined intraregional differences resulting in the establishment of group territories along major streams (Aten 1983, Patterson 1987). Clear Creek falls within the western margin of one such territory termed the Galveston Bay area (Aten 1983).

### *Historic (1600s – 1950)*

The historic period begins with the initial contact between native people and European explorers. The first European explorer to reach Texas was Alvar Nunez Cabeza de Vaca during the 1528 Narvaez Expedition of the Gulf coast. Cabeza de Vaca was stranded in Texas for eight years travelling throughout Texas and Mexico meeting different Native American groups. He was eventually rescued and went back to Spain. During his journey, Cabeza de Vaca documented numerous groups of people, their customs, and cultural differences (Chipman 2015). Although, Texas and much of the southeast was claimed by Spain, the French exploration and attempted colonization in the late 1600s led the Spanish to increase their colonization efforts. Subsequent Spanish entradas in Texas began during the early 1700s with the establishment of the Spanish missions. During the mid-18th century the Spanish attempted to firm up their control of eastern Texas in response to the increased French trade with the natives along the Red River and the founding of New Orleans in 1718. However, the Spanish were never able to successfully establish a permanent colony or mission in eastern Texas. By 1803, Spain had ceded Louisiana to the French who in turn sold it a month later to the United States. By this time, not only French but American and English colonists began actively settling eastern and southeastern Texas. Shortly afterward, Mexico gained its independence from Spain with the help of Anglo-Americans living in Texas (Henson 2010, Nue 2015).

Mexican independence caused a rush of immigrants from the east, many of whom received empresario contracts allowing them to settle in Texas. Several of these people became important figures in Texas' independence, including Stephen F. Austin and David G. Burnet (Henson 2010, Nance 2016). Texas gained its independence from Mexico in 1836, following the Battle of San Jacinto, where Sam Houston's forces caught Mexican General Santa Anna off guard. The resulting defeat forced Mexico to sign a peace treaty in Velasco on May 14, 1836, establishing the Republic of Texas. The resulting peace and removal of immigration limitations caused an explosion in the populations of Texas especially along the coast, with many immigrants coming through Galveston and Matagorda (Henson 2010, Nance 2016).

Harris County was formed in December of 1836 as Harrisburg County. The history of the county is directly tied to that of Houston's growth. Augustus and John Allen founded the "Town of Houston" in 1836 named after Sam Houston. Incorporated in 1837, the town became the temporary capital of the Republic of Texas (McComb 2015). After the revolution, Harris counties recovery was slow with economic centers focused on the coast. Trading posts began to stretch out into the interior as far west as Waco, and Steam boat travel along some of the rivers helped increase traffic to the interior of Texas. With the annexation of Texas by the United States in 1847, commercial traffic and immigration to Texas increased, and many people began to move into the areas outside of Houston (Henson 2010).

Pearland began as an agricultural community along a siding switch of the Gulf, Colorado and Santa Fe Railway in 1882. Initially called Mark Belt, the small community was renamed Pearland in 1893 after its plethora of pears trees. With the hurricanes of 1900 and 1915 and subsequent blights, Pearland suffered

heavy agricultural losses causing many residents to move away (Allbright 2007). Those that stayed began rice farming and by the 1940's, the area was the nation's leading rice producer. In the 1930's, oil was discovered at the Hastings, Freindswood, and Manvel oilfields greatly benefiting neighboring Pearland (Brazoria County Historical Museum and Commission 1986). Despite Pearland's successes in agriculture, it remained a relatively small farming community well into the 1960s when population began to grow as the area became a bedroom community for Houston (Allbright 2007).

## Methods

### Records Review

Pape-Dawson archaeologists conducted a thorough background literature and records search of the proposed APE. This research included reviewing the Pearland (2995-421) U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle map at TARL and searching the THC's Texas Archeological Sites Atlas (Atlas) online database for any previously recorded surveys and historic or prehistoric archaeological sites located within a 0.62-mile (1- km) radius of the APE. In addition, the review included information on the following types of cultural resources: NRHP-listed properties and sites, NRHP districts, cemeteries (including Historic Texas Cemeteries), Official Texas Historical Markers (OTHM) (including Recorded Texas Historic Landmarks), as well as SALs located within one kilometer (km) of the APE. In addition, archeologists consulted archeological site records at the Texas Archeological Research Laboratory (TARL), and historic maps and aerials that depict the APE.

### Fieldwork

Pape-Dawson personnel conducted an intensive archeological survey of the proposed APE. Soils in the APE are mapped entirely as clayey soils found on the coastal plains, and therefore it was anticipated that archeological deposits, if present, would be located near the surface or at depths reachable by shovel test excavations. Thus, mechanical trenching was not warranted.

Pape-Dawson archeologists performed a pedestrian survey of the proposed project APE. This included a visual inspection of the ground surface supplemented by judgmental shovel testing in areas with perceived potential for buried cultural deposits and with less than 30 percent ground surface visibility. All survey methods followed the CTA/THC *Archeological Survey Standards for Texas*. Shovel tests measured roughly 30 by 30 cm (12 by 12 inches) in size and were excavated in 10-cm (4-inch) levels to pre-Holocene clay or to a maximum depth of 80 cm (32 inches) below the ground surface. All soils were screened through ¼-inch mesh unless clay concentrations were high enough to require hand sorting. All shovel tests were recorded, visually described, plotted by a Global Positioning System (GPS) unit, and backfilled upon completion. A total of 12 shovel tests were excavated in order to investigate the proposed 18.19-acre APE. No artifacts were collected as a result of the survey. All original paperwork (e.g., photographs, shovel test logs) will be curated at TARL following the specified standards of preparation.

## Results

### Records Review

The results of this cultural resources background review identified no NRHP-listed properties, SALs, OTHMs, RTHLs, cemeteries, or previously recorded archeological sites within the APE (THC 2016). Within 0.62 mile (1 km) of the project footprint, there are one OTHM (Our Lady of Guadalupe Catholic Church), and one previously recorded archaeological site (41HR817). In addition, five previously conducted surveys and a data recovery project have taken place within 0.62 mile (1 km) of the APE (Figure 4). THC's online Texas Archeological Site Atlas shows Our Lady of Guadalupe Catholic Church (OTHM), approximately 175 ft (53 m) northwest of the project area. However, based on the Atlas description and Google maps, this OTHM is actually located in downtown Houston at the corner of S. Jensen Drive and Navigation Blvd. This indicates that the location of the OTHM is not accurately depicted on the THC's Atlas and therefore not accurately depicted on Figure 4, which is based on THC data.

Our Lady of Guadalupe Catholic Church was established in 1911 by four Oblate priests sent to establish a mission church to serve Houston's Spanish-speaking immigrant population (THC 2016). The wood-frame structure is named for Mexico's patron saint, and it has served as both a Spanish-speaking church and school. In 1973 the Sacred Heart Order assumed responsibility for the church, but its traditional role ministering to immigrant communities continued. Still a focal point for Houston's Mexican-American community, Our Lady of Guadalupe Church became the home church to many Central American and Vietnamese refugees in the 1970s (THC 2016). However, review of historic and modern aerials show no evidence that this structure or marker was ever located near the APE. Pape-Dawson archaeologist investigated this discrepancy and determined that the actual church and marker are located at the corner of S. Jensen Drive and Navigation Blvd. in Houston.

Site 41HR817 is a prehistoric site of unknown age situated on the east side of Clear Creek and 0.53 mile (0.86 km) south of the APE (THC 2016). Moore Archeological Consulting, Inc. conducted survey and data recovery investigations that included trenching and the excavation of five 1x1-m units on behalf of the Harris County Flood Control District (HCFCD) under Antiquities Permit Number 2012 (Pearl 1997; Mahoney and Moore 1998). Five chert flakes were recovered from between 11 to 17 inches (30 to 40 cm) below surface. Due to the paucity of materials recovered and previous impacts, the site was not recommended for further work and was determined to be not eligible for inclusion to the NRHP (THC 2016).

The previously conducted surveys are all south of the APE and include a 1973 survey along Clear Creek on behalf of the U.S. Army Corps of Engineers (USACE), a 1985 survey of the Sam Houston Parkway by the State Department of Highways and Public Transportation (SDHPT 1985; present-day Texas Department of Transportation), and the aforementioned 1997 survey and subsequent data recovery on behalf of HCFCD (Pearl 1997; Mahoney and Moore 1998). No Antiquities Permit is associated with any of these surveys and information about them is limited to locational data. The other two surveys were conducted in 2007 and 2013 by Prewitt and Associates and by HRA Gray and Pape, respectively (THC 2016). Prewitt and Associates conducted a reconnaissance survey on behalf of the Harris County Flood

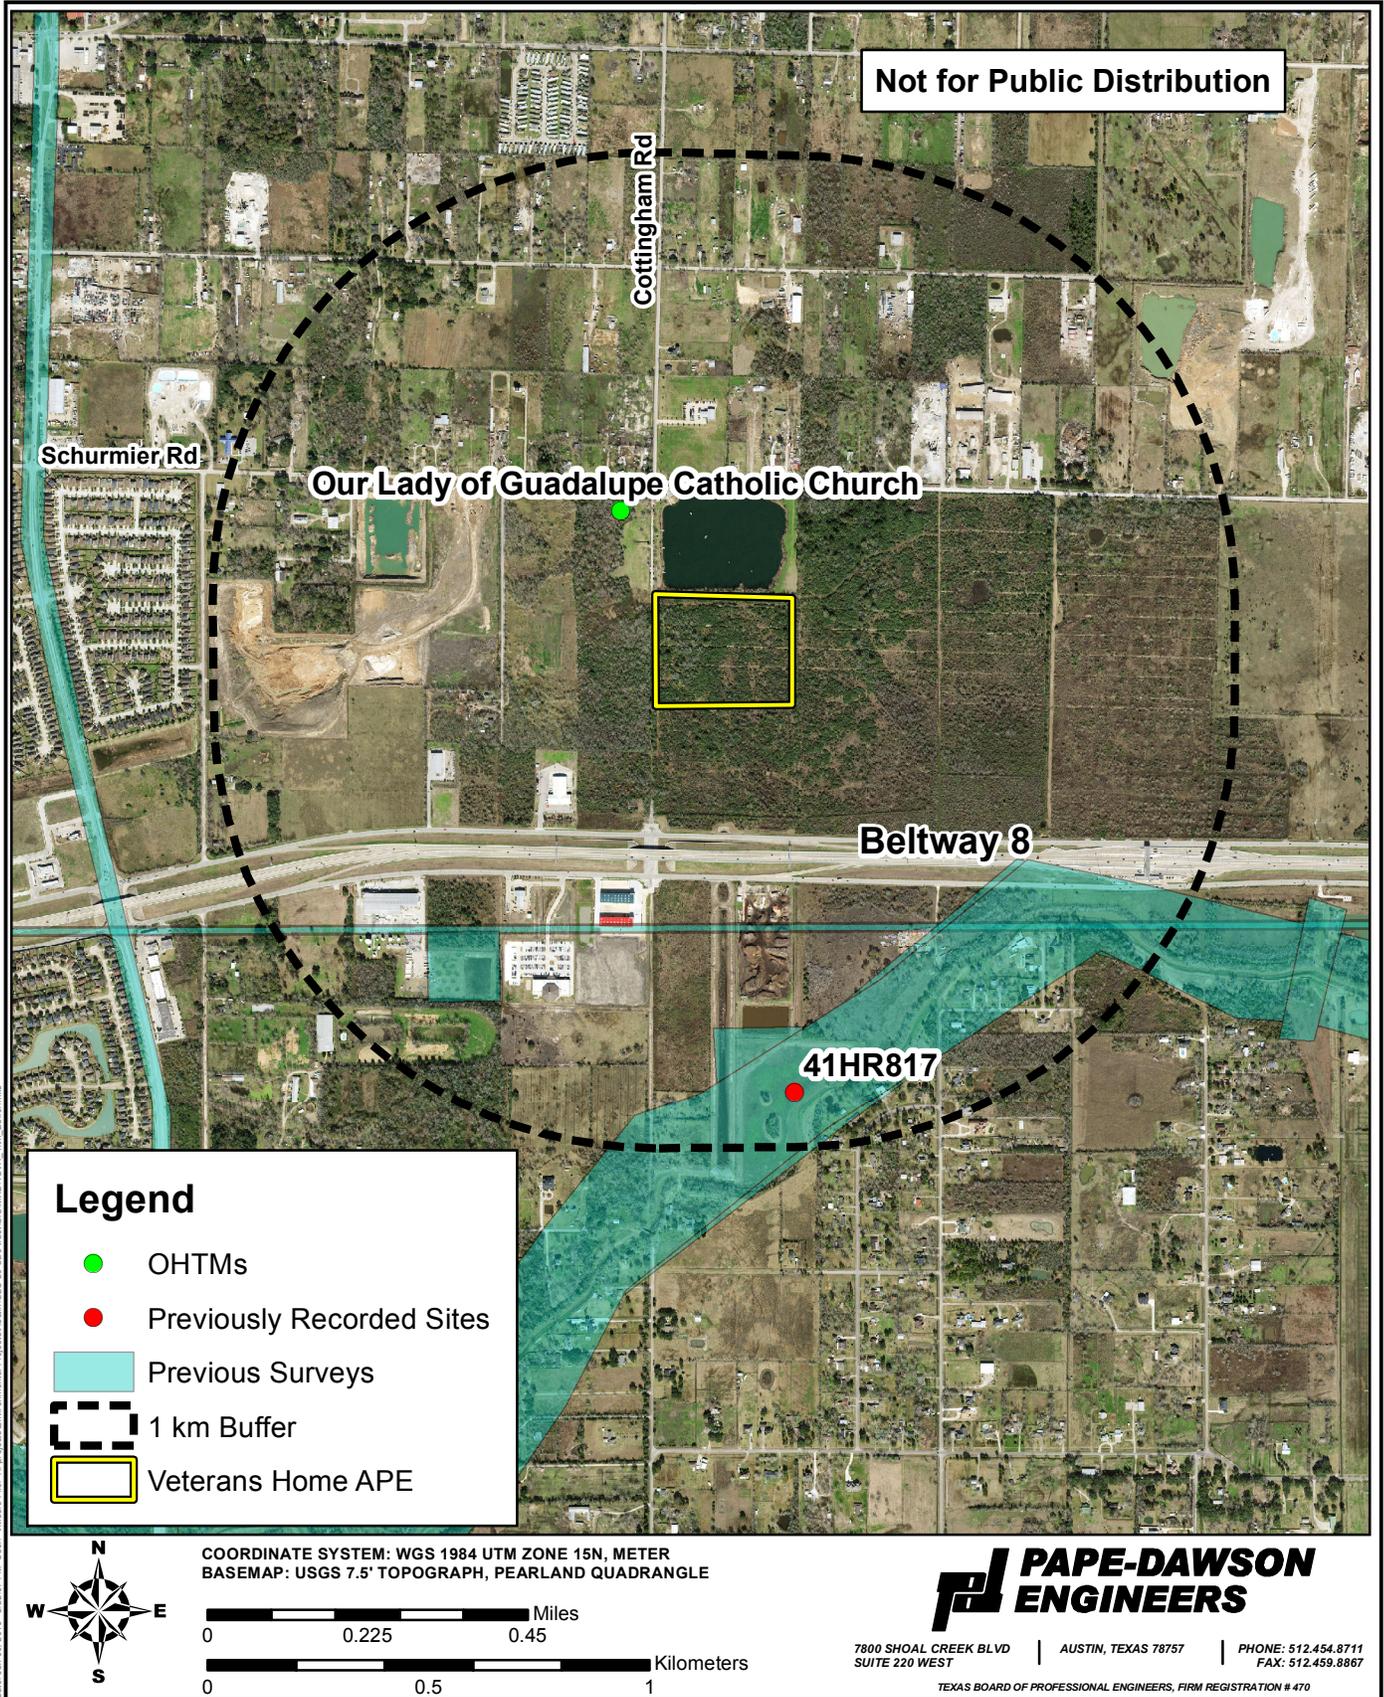

Control District (apparently without an Antiquities Permit) (THC 2016), while HRA Gray and Pape surveyed detention pond locations along the Sam Houston Tollway under Antiquities Permit Number 6545 (Bruner et al. 2014). Since the APE and most of the surrounding area has not been subjected to systematic archeological survey, the actual number of sites existing within 0.62 mile (1 km) of the project APE may be substantially underrepresented by the current number of known sites.

In addition to reviewing previously recorded cultural resources in the project area, Pape-Dawson archaeologists reviewed historic aerial photographs and topographic maps depicting the project area. All the topographic maps consulted (1998, 1983, 1970, 1969, 1957, 1955, 1949, 1943, 1941, 1930, and 1920) mapped the land as rural and did not show any historic age structures. Likewise, the aerial photographs (2012, 2010, 2009, 2008, 2004, 2002, 1995, 1981, 1973, 1969, 1964, 1957, 1953, and 1944) depict no historic structures within the APE (NETR 2016). However, historic aerials reveal that the APE was open prairie or pasture as early as 1953 and did not become completely overgrown until the late 2000s. According to historic maps from 1920 to 2012 there is no evidence that structures are present within the current project area (NETR online 2016).

## Fieldwork

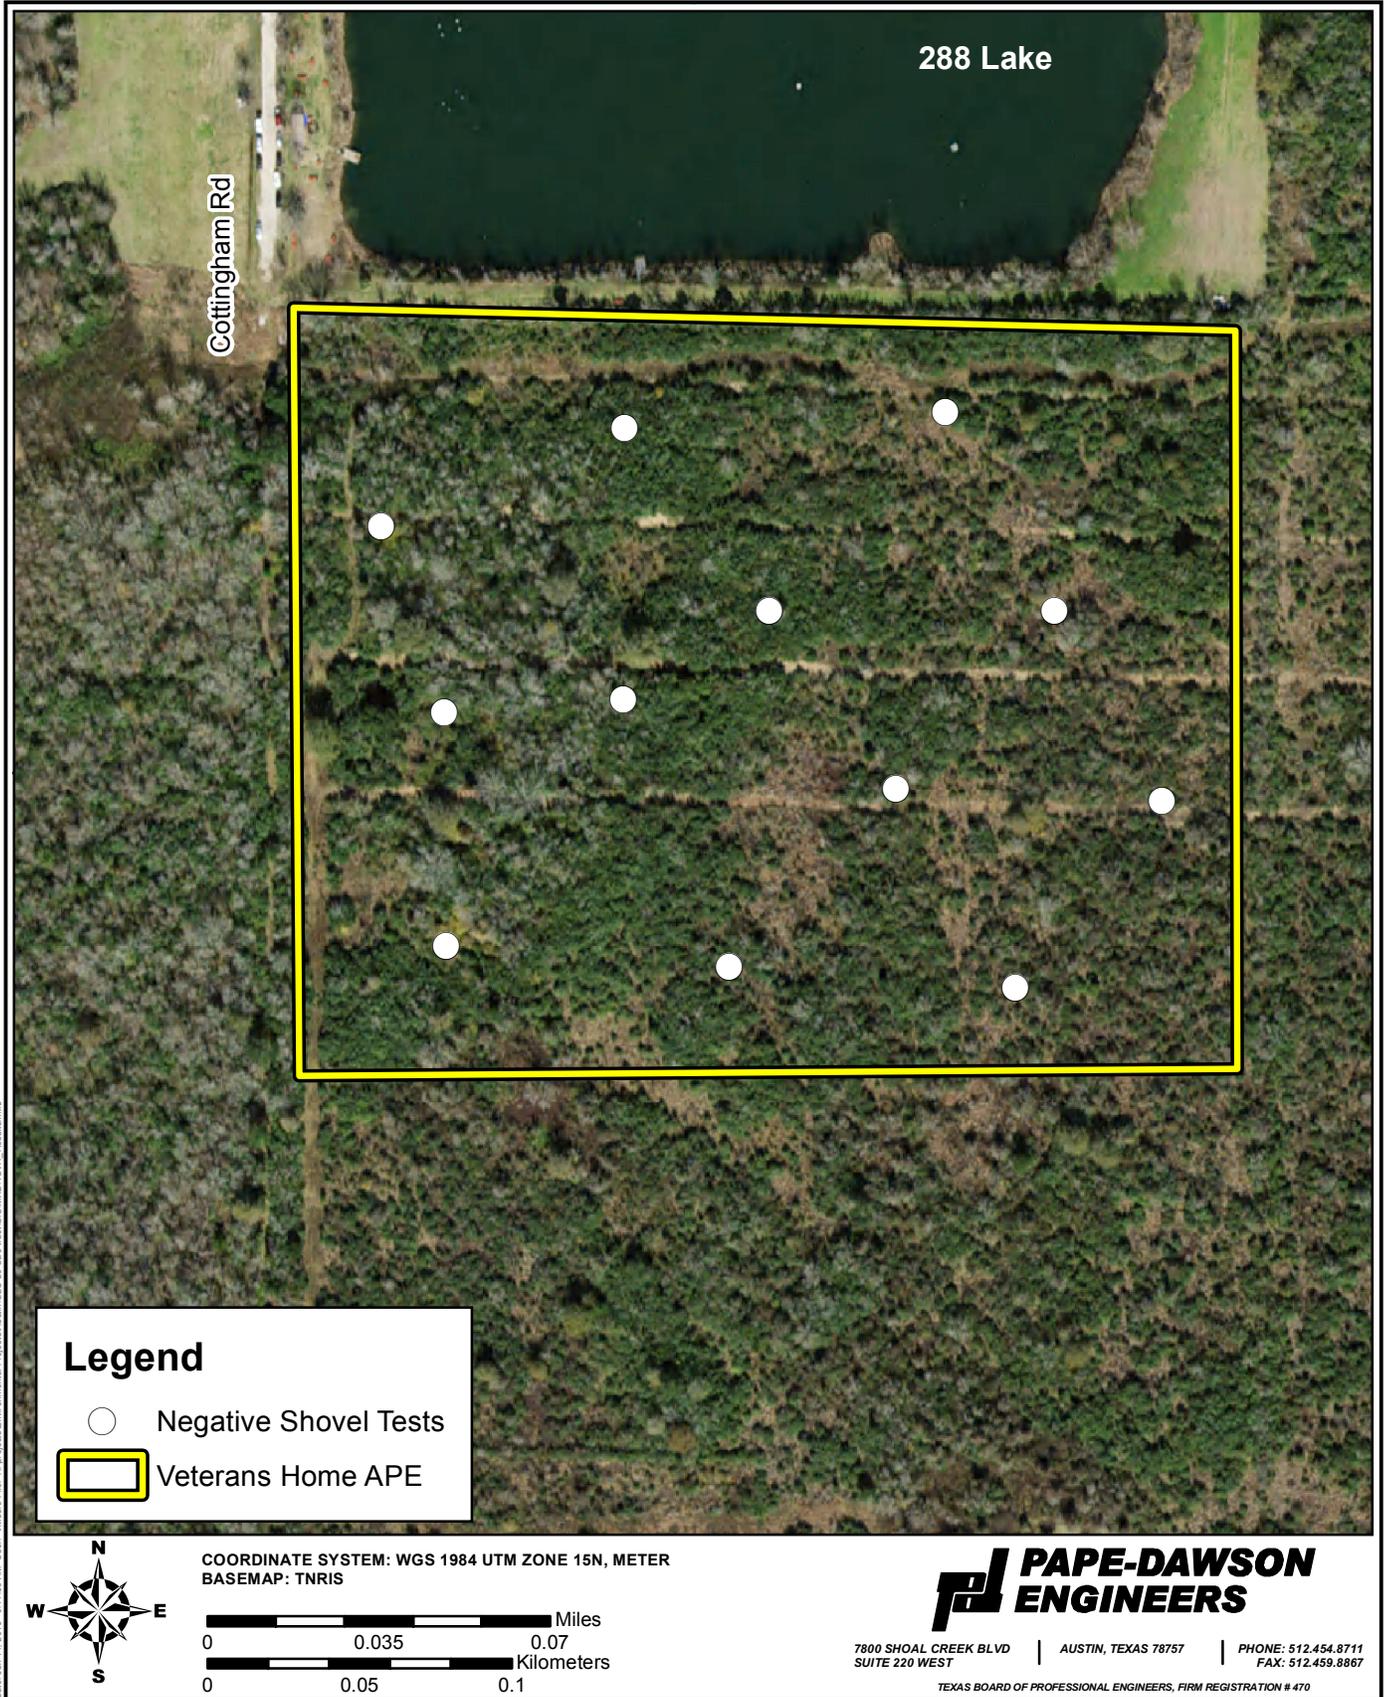

Pape-Dawson archaeologists conducted an intensive archaeological survey of the 18.19-acre (7.36- ha) APE on May 25, 2016. Prior to the current investigations, three transects were cleared in the APE. These new 10 to 15 meter (32 to 49 feet) wide clear cuts run in a general east to west direction spaced approximately 60 meters apart (Figure 6). Archeologists identified several disturbances that appear to have occurred as a result of previous linear land clearing in addition to the recent clearing (see Figure 2 and 7). Very dense vegetation throughout the APE greatly limited ground surface visibility (Figure 8 and Figure 9). The few areas with 100 percent ground surface visibility were along the clear cuts. However, due to the clearing, these swaths were heavily disturbed and often inundated (Figure 10). Due to the large amount of rain in the region over the previous month, the eastern third of the APE contained large swaths of in standing water. During the current survey effort, a total of 12 shovel tests were excavated to either side of three clear cuts to evaluate the impact of the proposed project on cultural resources (Figure 5). Shovel tests were placed in areas with the most potential to contain intact, buried cultural resources.

Shovel tests were placed in areas with the least disturbance or within areas of the APE with the perceived potential to contain intact soils. All shovel tests on this tract were excavated to culturally sterile soil horizons encountered at depths between 30 and 55 cm (11.81 and 21.65 inches) below the surface. A typical soil profile recorded within the APE consisted of dark grayish brown (10YR4/1) to dark gray (10YR3/1) clay loam (Figure 11) from the surface to a maximum depth of 55 cm (21.65 inches) followed by dark gray (10YR4/1) to gray (10YR5/1) clay with calcium carbonate nodules observed below 40 cm (15.75 inches). Two shovel tests excavated in the eastern third of the APE encountered water within the top 30 cm (11.81 inches) due to saturated soils.

**Figure 3 : Existing Cultural Resources within 1 km of the APE.**

\* Map is based on THC data. Location of Our Lady of Guadalupe Catholic Church is not accurately depicted on this figure. See page 11 for further information.

**Figure 6 : Shovel tests within the APE.**

No structural remains or artifacts were observed on the ground surface. This cultural resources survey encountered no cultural resources, as defined under 36 CFR 60.4. The area affected by the proposed Texas State Veterans Home project holds a very low probability of containing significant cultural resources.

Figure 11: General Shovel Test Profile

## Conclusion and Recommendations

Pape-Dawson conducted an intensive archaeological survey for the proposed 18.19-acre (7.36-ha) development for the Texas State Veterans Home situated on lands owned by the GLO in Houston, Harris County, Texas. The proposed project would include the construction a state veterans home and its associated driveways, parking lots, and utility installations. The roughly rectangular APE is along Cottingham Road (Future MLK Blvd.) and about 815 ft (248 m) south of the roadway's intersection with Schurmier Road. BW8 is about 943 ft (287 m) to the south of the APE, which is maximally 1,016 ft (310 m) east to west and 829 ft (253 m) north to south.

The intensive pedestrian survey was conducted under Texas Antiquities Permit No. 7651 by Pape-Dawson archeologists on May 25, 2016. The APE was subject to visual inspection supplemented by judgmentally placed shovel tests in order to evaluate the impact of the proposed project on archeological resources. A total of 12 shovel tests were excavated to investigate the 18.19 acre (7.36-ha) APE in areas of least disturbance, averaging 1.5 shovel test per acre and exceeding the minimum archeological survey standards established by the CTA/THC. Major disturbances recorded include clear cutting and associated push piles of vegetation. All shovel tests were negative for archeological material. No artifacts were collected, and all project records and photographs will be curated at TARL.

No archeological sites were previously recorded at this location and none were identified during the current survey. In accordance with 36 CFR 800.4, Pape-Dawson has made a reasonable and good faith effort to identify archaeological historic properties within the APE. As no properties were identified that meet the criteria for listing in the NRHP according to 36 CFR 60.4 or for designation as an SAL according to 13 TAC 26.12, Pape-Dawson recommends no further work.

If cultural material is encountered during construction, it is recommended that all work in the vicinity should cease and the discovery be evaluated by a qualified archaeologist who can provide guidance on how to proceed in accordance with state regulations.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# EXECUTIVE SUMMARY

## STANDARD ENVIRONMENTAL RECORDS

### ***State and tribal landfill and/or solid waste disposal site lists***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Texas Commission on Environmental Quality's permitted Solid Waste Facilities list.

A review of the SWF/LF list, as provided by EDR, and dated 11/03/2015 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

## ADDITIONAL ENVIRONMENTAL RECORDS

### ***Local Lists of Landfill / Solid Waste Disposal Sites***

SWRCY: A listing of recycling facilities in the state.

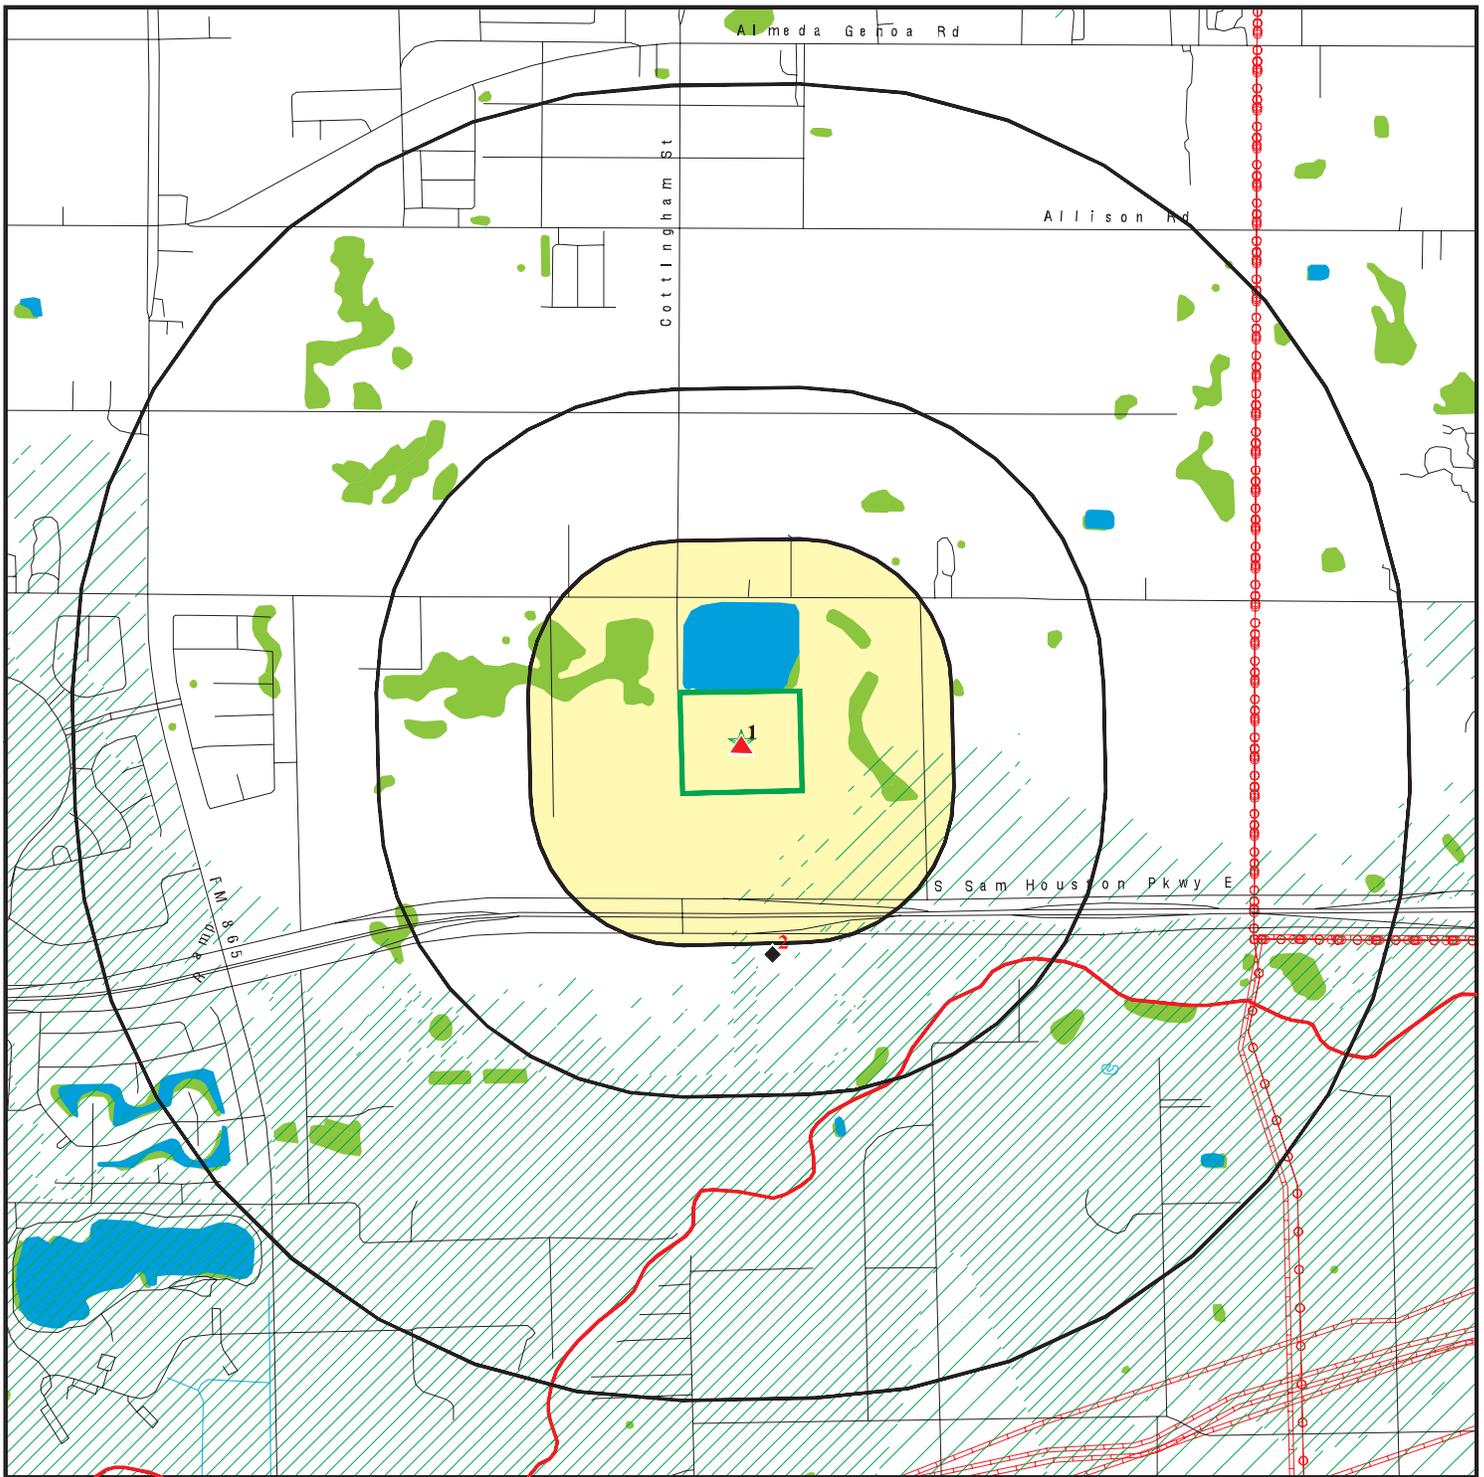

A review of the SWRCY list, as provided by EDR, and dated 11/13/2015 has revealed that there is 1 SWRCY site within approximately 0.5 miles of the target property.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 04/05/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/18/2016
	Data Release Frequency: Quarterly

EPA Region 10  
Telephone 206-553-8665

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 04/05/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/18/2016
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 04/05/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/18/2016
	Data Release Frequency: Quarterly

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/08/2015	Telephone: 703-603-8704

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 04/05/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 08/01/2016
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2016	Telephone: 214-665-6444

Number of Days to Update: 34	Next Scheduled EDR Contact: 07/11/2016
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2016	Telephone: 214-665-6444

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2015	Source: Department of the Navy
Date Data Arrived at EDR: 05/29/2015	Telephone: 843-820-7326
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 02/16/2016
Number of Days to Update: 13	Next Scheduled EDR Contact: 05/30/2016
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 09/10/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/11/2015	Telephone: 703-603-0695
Date Made Active in Reports: 11/03/2015	Last EDR Contact: 02/29/2016
Number of Days to Update: 53	Next Scheduled EDR Contact: 06/13/2016
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 09/10/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/11/2015	Telephone: 703-603-0695

Data Release Frequency: Semi-Annually

## ADDITIONAL ENVIRONMENTAL RECORDS

### Local Brownfield lists

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/17/2015	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 12/04/2015	Telephone: 202-307-1000

Data Release Frequency: Quarterly

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

**FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)**  
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 02/22/2016
Number of Days to Update: 25	Next Scheduled EDR Contact: 06/06/2016
	Data Release Frequency: Quarterly

**FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)**  
A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 02/22/2016
Number of Days to Update: 25	Next Scheduled EDR Contact: 06/06/2016
	Data Release Frequency: Quarterly

**MLTS: Material Licensing Tracking System**

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 03/07/2016	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 03/18/2016	Telephone: 301-415-7169
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 05/06/2016
Number of Days to Update: 28	Next Scheduled EDR Contact: 08/22/2016
	Data Release Frequency: Quarterly

**COAL ASH DOE: Steam-Electric Plant Operation Data**

A listing of power plants that store ash in surface ponds.

Date of Government Version: 12/31/2005	Source: Department of Energy
Date Data Arrived at EDR: 08/07/2009	Telephone: 202-586-8719
Date Made Active in Reports: 10/22/2009	Last EDR Contact: 04/15/2016
Number of Days to Update: 76	Next Scheduled EDR Contact: 07/25/2016
	Data Release Frequency: Varies

**COAL ASH EPA: Coal Combustion Residues Surface Impoundments List**

A listing of coal combustion residues surface impoundments with high hazard potential ratings.

Date of Government Version: 07/01/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/10/2014	Telephone: N/A
Date Made Active in Reports: 10/20/2014	Last EDR Contact: 03/11/2016
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/20/2016
	Data Release Frequency: Varies

**PCB TRANSFORMER: PCB Transformer Registration Database**

The database of PCB transformer registrations that includes all PCB registration submittals.

Date of Government Version: 02/01/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/19/2011	Telephone: 202-566-0517
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 04/26/2016
Number of Days to Update: 83	Next Scheduled EDR Contact: 08/08/2016
	Data Release Frequency: Varies

**RADINFO: Radiation Information Database**

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007  
Date Made Active in Reports: 04/10/2007

## FUSRAP: Formerly Utilized Sites Remedial Action Program

DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

Date of Government Version: 11/23/2015	Source: Department of Energy
Date Data Arrived at EDR: 11/24/2015	Telephone: 202-586-3559
Date Made Active in Reports: 02/18/2016	Last EDR Contact: 02/08/2016
Number of Days to Update: 86	Next Scheduled EDR Contact: 05/23/2016
	Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 09/14/2010	Source: Department of Energy

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## GCC: Groundwater Contamination Cases

Texas Water Code, Section 26.406 requires the annual report to describe the current status of groundwater monitoring activities conducted or required by each agency at regulated facilities or associated with regulated activities. The report is required to contain a description of each case of groundwater contamination documented during the previous calendar year. Also to be included, is a description of each case of contamination documented during previous periods for which voluntary clean up action was incomplete at the time the preceding report was issued. The report is also required to indicate the status of enforcement action for each listed case.

Date of Government Version: 12/31/2014

## UIC: Underground Injection Wells Database Listing

Class V injection wells regulated by the TCEQ. Class V wells are used to inject non-hazardous fluids underground. Most Class V wells are used to dispose of wastes into or above underground sources of drinking water and can pose a threat to ground water quality, if not managed properly.

Number of Days to Update: 86	Next Scheduled EDR Contact: 06/06/2016
	Data Release Frequency: Quarterly

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date Made Active in Reports: N/A	Last EDR Contact: N/A
Number of Days to Update: N/A	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

#### EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Child Care Facility List

Source: Department of Protective & Regulatory Services  
Telephone: 512-438-3269

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

UTM Y (Meters):	3277036.8
Elevation:	51 ft. above sea level

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	5937173 PEARLAND, TX
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

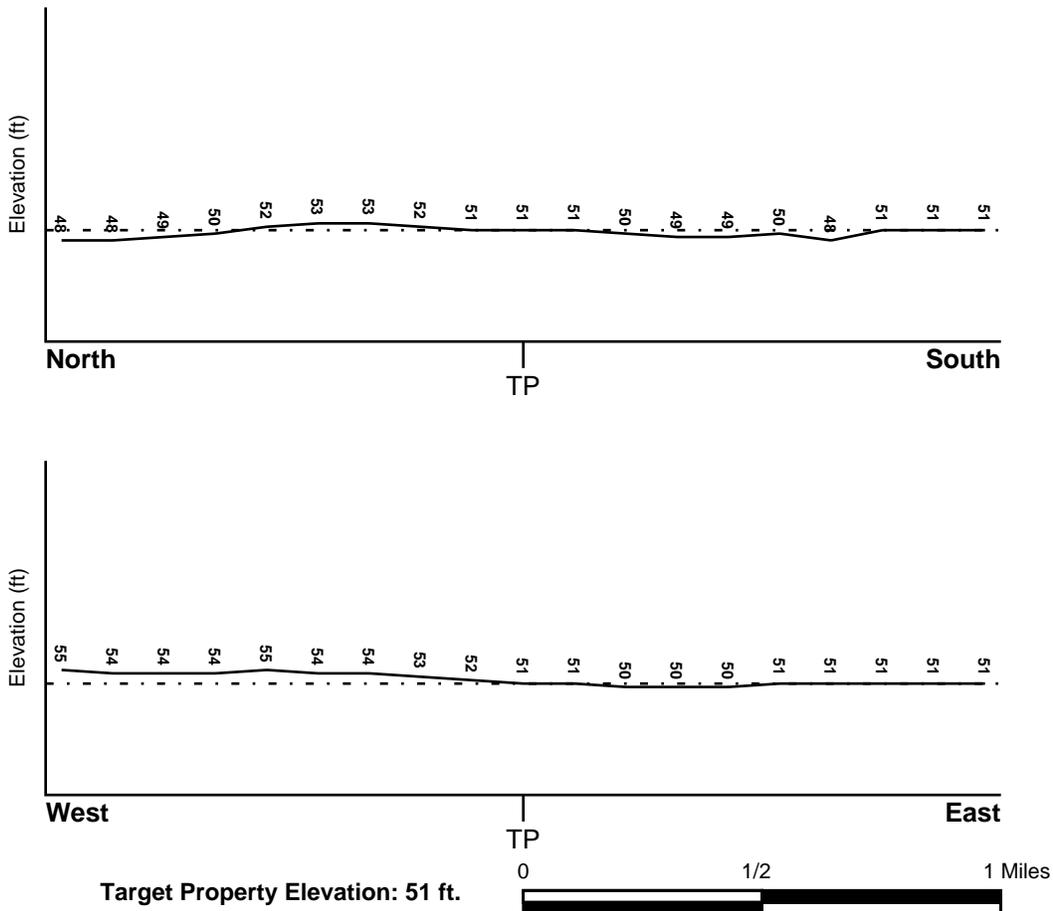

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Target Property County</u>	FEMA Flood
HARRIS, TX	<u>Electronic Data</u>
	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 48201C - FEMA DFIRM Flood data

4800770030H - FEMA Q3 Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	NWI Electronic
PEARLAND	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **Site-Specific Hydrogeological Data\*:**

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Bernard

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 6.1
2	5 inches	33 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.42 Min: 0.01	Max: 7.8 Min: 6.1
3	33 inches	64 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 6.6

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Texas General Land Office

Telephone: 512-463-0745

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Pape Dawson were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

## Limited Permission To Make Copies

Pape Dawson (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

### Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. # 2014 DRINKING WATER QUALITY REPORT

**CITY OF HOUSTON**

**DEPARTMENT OF PUBLIC WORKS AND ENGINEERING**

**En Español**

Este informe incluye información importante sobre el agua potable. Si tiene preguntas o comentarios sobre éste informe, favor de llamar al tel.311 para hablar con una persona bilingüe en español.

# ABOUT THIS REPORT

This Report lists all of the federally regulated or monitored contaminants which have been found in your drinking water. The U.S. Environmental Protection Agency (EPA) requires water systems to test for up to 97 contaminants. If a contaminant was reported in a prior year's report, but is not detected in this report year's samples, that contaminant has been removed from the list.

All drinking water may contain contaminants. When drinking water meets federal standards, there may not be any health based benefits to purchasing bottled water or point of use devices. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (1-800-426-4791).

Sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land and through the ground, it dissolves naturally-occurring minerals, and in some cases, radioactive material. It can also pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water before treatment include: microbes, inorganic contaminants, pesticides, herbicides, radioactive contaminants, and organic chemical contaminants.

**The City of Houston 6 Community Public Water Systems** are shown on the map here. Use the map and table of contents to see calendar year 2014 sample results for your area of interest.

Willowchase (TX1011902)	6
Utility District 5 (TX1010348)	8
District 82 (TX1011593)	10
District 73 (TX1011585)	11
Belleauwoods (TX1011594)	12
Contaminant Information	13

**Special Notice for the ELDERLY, INFANTS, CANCER PATIENTS,** people with HIV/AIDS or other immune problems: You may be more vulnerable than the general population to certain microbial contaminants, such as *Cryptosporidium*, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; those who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care provider. Additional guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at (800) 426-4791.

# DEFINITIONS & ABBREVIATIONS

---

## **AL**

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements a water system must follow.

## **LRAA**

Locational Running Annual Average - The average of results taken at a specific monitoring location during the previous four calendar quarters

## **MCLG**

Maximum Contaminant Level Goal - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. Since MCLGs do not consider limits of detection and available treatment technology, sometimes they are set at a level below MCLs which water systems cannot meet. MCLGs are non-enforceable public health goals.

## **MCL**

Maximum Contaminant Level - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to maximum contaminant level goals as feasible using the best available treatment technology.

## **MRDLG**

Maximum Residual Disinfectant Level Goal - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

## **MRDL**

Maximum Residual Disinfectant Level - The highest level of a disinfectant allowed in drinking water. There is convincing evidence the addition of a disinfectant is necessary for control of microbial contaminants.

**N/A** - Not Applicable

**ND** - Not Detected

**NTU** - nephelometric turbidity units  
(a measure of turbidity)

**pCi/L** - picocuries per liter  
(a measure of radioactivity)

**ppm** - parts per million,  
or milligrams per liter (mg/L)

**ppb** - parts per billion,  
or micrograms per liter (µg/L)

**ppt** - parts per trillion,  
or nanograms per liter (ng/L)

## **TT**

Treatment Technique - A required process intended to reduce the level of a contaminant in drinking water.

## **Contact Us**

Questions or concerns about your water? **Contact 311.**

- Call 311
- Visit [www.houstontx.gov/311](http://www.houstontx.gov/311)
- Download the 311 app for iPhone and Android

**311 is Houston's non-emergency service center.**

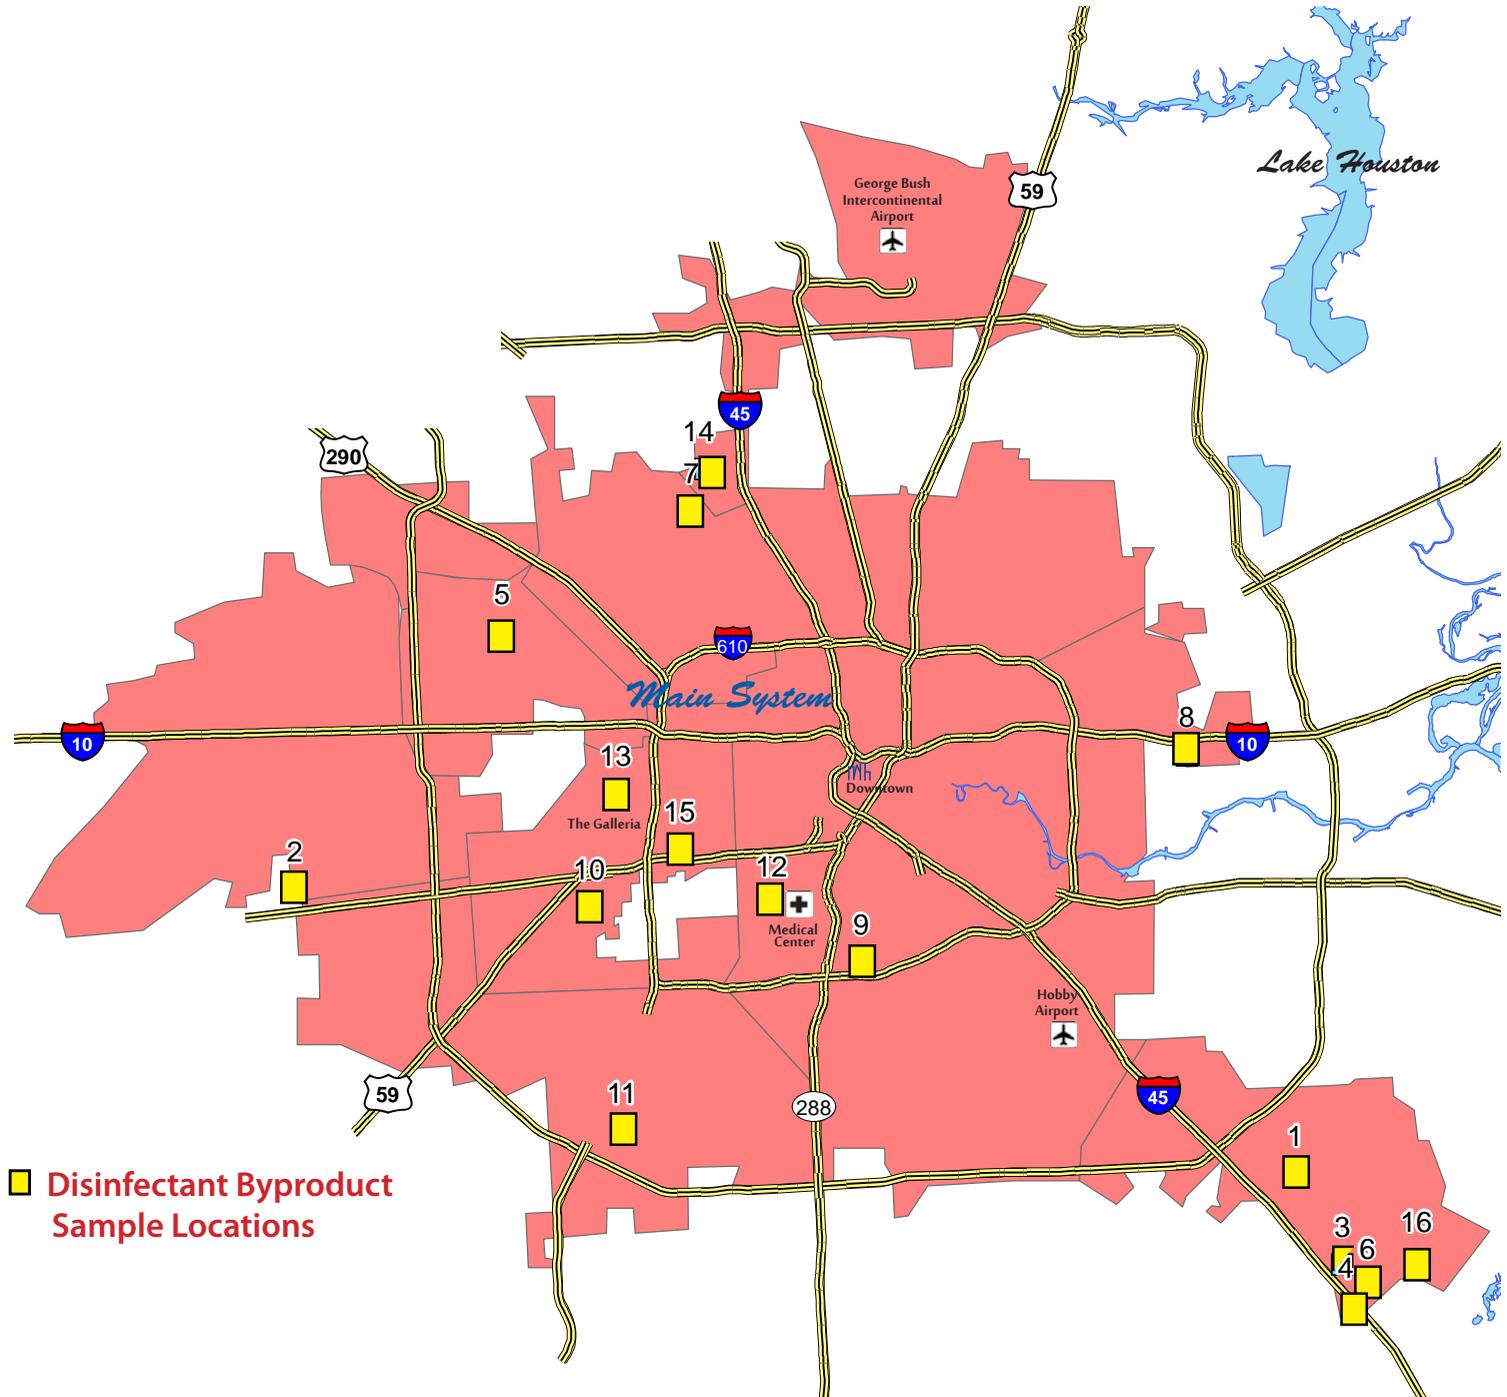

Customers may use 311 to notify us of any problems they may be experiencing and a water quality investigator will be dispatched within twenty-four hours to respond to and resolve the problem.

# MAIN SYSTEM

Public Water System ID 1010013

In 2014, the Main System produced an average of 446 million gallons of water every day: 91% from surface water treatment plants and 9% from groundwater plants.

- Surface water comes from the San Jacinto River through Lake Conroe and Lake Houston, and the Trinity River, through Lake Livingston and is treated at one of the system's three large surface water treatment plants.
- Groundwater is produced from the Evangeline and Chicot Aquifers by wells with depths greater than 750 feet.

# MAIN SYSTEM

## 2014 Sample Results

### System Disinfection Parameters

	Regulatory Requirements		2014 Detections	
Chloramines (Disinfectant)	<b>MRDLG</b>	<b>MRDL</b>	<b>Chloramine Levels</b>	
	< 4.0 ppm	4.0 ppm	<b>Avg</b>	<b>Max</b>
			2.2	4.0
Total Coliform*	<b>MCLG</b>	<b>MCL</b>	<b>Total Coliform Detections</b>	
	0 detections	Presence of coliform bacteria in more than 5% of monthly samples	Highest monthly percentage of positive samples: 1.8%	
E.coli	<b>MCLG</b>	<b>MCL</b>	<b>E.coli Detections</b>	
	0 detections	A routine sample and repeat sample are Total Coliform positive, and one is also <i>E.coli</i> positive.	No MCL violations. Detected <i>E.coli</i> positive results in 2 routine samples, however repeat samples were all negative for <i>E.coli</i> and Total Coliform.	
Turbidity	<b>TT (Treatment Technique)</b>		<b>Turbidity Measurements</b>	
	95% or more of sample tested each month less than or equal to 0.3 NTU		Lowest monthly percentage of samples less than or equal to 0.3 NTU: 100% Highest Single Measurement: 0.3 NTU	

\*Coliforms are bacteria naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present. When coliform is detected the system is required to follow-up with additional sampling to confirm the integrity of the water or determine if there is a problem. All follow-up samples indicated the water was safe and free of coliform.

### Disinfectant Byproduct Results

Sample Location	Haloacetic Acids (ppb)			Total Trihalomethanes (ppb)		
	Min	Avg	Max	Min	Avg	Max
1	17.4	27.5	39.8	20.8	33.6	42.8
2	14.1	23.7	36.0	19.3	28.2	34.0
3	19.0	27.0	31.9	9.8	25.9	33.9
4	12.6	26.6	46.8	24.9	33.0	40.9
5	19.2	28.5	36.5	19.2	29.8	36.5
6	15.6	26.2	39.7	17.4	30.9	38.3
7	20.5	25.6	29.7	25.4	29.1	32.5
8	14.2	26.6	38.9	17.7	29.2	36.2
9	19.2	30.2	50.0	24.6	32.0	39.1
10	2.6	10.5	25.1	6.3	14.5	23.2
11	18.6	26.9	32.2	26.2	30.5	36.9
12	18.2	32.1	50.1	29.9	35.1	41.0
13	14.4	27.5	35.7	18.7	30.8	35.1
14	16.5	29.3	39.8	28.9	35.5	45.6
15	18.3	27.9	34.0	9.2	29.2	43.4
16	11.1	24.3	40.2	24.1	33.3	41.8

\*Compliance is based on locational running annual average (LRAA). The highest LRAA for Haloacetic Acids and Total Trihalomethanes is highlighted yellow.

Lead (ppb) 2012 <sup>(2)</sup>	0	AL = 90% below 15 ppb	90% below 3.72 ppb No sample above 15 ppb		
Copper (ppm) 2012 <sup>(2)</sup>	1.3	AL = 90% below 1.3 ppm	90% below 0.255 ppm One sample above 1.3 ppm at 1.77 ppm		

### Synthetic & Volatile Organic Contaminant Results

Atrazine (ppb)	3	3	ND	0.2	0.6
Hexachlorocyclopentadiene (ppb)	50	50	ND	0.0	0.2
Ethylbenzene (ppb)	700	700	ND	0	0.6
Simazine (ppb)	4	4	ND	0.0	0.1
Xylenes (ppm)	10	10	ND	0.001	0.004

### Radiological Contaminant Results

Gross Alpha (pCi/L)	0	15	2.3	8.0	14.5
Gross Beta (pCi/L)	0	50	ND	2.6	7.2
Combined Radium (pCi/L)	0	5	ND	2.0	5.3
Combined Uranium (ppb)	0	30	ND	4.4	11.4

(1) Arsenic - While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

(2) Detected contaminants within the past five years - subject to reduced monitoring requirements.

(3) Combined Radium - Compliance for combined radium is based on a running annual average. A system is in compliance if the running annual average at each entry point remains below the MCL of 5 pCi/L. One reading was detected above 5pCi/L in 2014; however the running average for all entry points in the system remained below the MCL.

### Unregulated Contaminants

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. Unregulated contaminants detected during 2014 are reported in the table below. For additional information and data visit <http://water.epa.gov/lawsregs/rulesregs/sdwa/ucmr> or call the Safe Drinking Water Hotline at (800) 426-4791.

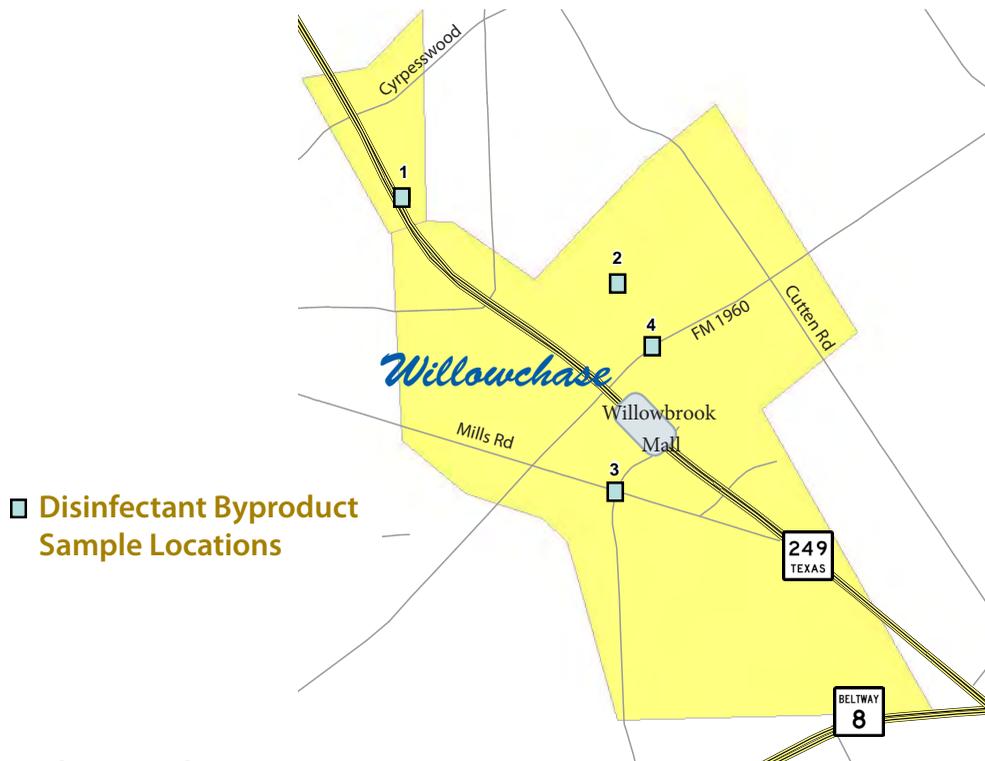

### Unregulated Contaminants

Contaminant (Units)	Min	Avg	Max
Chromium (µg/L)	ND	0.3	6.0
Molybdenum (µg/L)	ND	1	8
Strontium (µg/L)	ND	183	650
Vanadium (µg/L)	ND	1	13

# WILLOWCHASE

Public Water System ID 1011902

The Willowchase water system provides water to approximately 13,500 people and relies solely on groundwater. Groundwater treatment plants receive water from 5 area wells. These wells draw water from the Evangeline and Chicot Aquifers, with typical depths greater than 750 feet. In 2014 this system provided an average of 2.2 million gallons per day to customers!

## Disinfectant Byproduct Results

Sample Location	Haloacetic Acids (ppb)			Total Trihalomethanes (ppb)		
	Min	Avg	Max	Min	Avg	Max
1	0.0	3.6	14.3	0.0	1.6	4.5
2	0.0	2.0	7.9	0.0	0.0	0.0
3	0.0	0.0	0.0	0.0	0.0	0.0
4	0.0	4.0	16.0	0.0	2.5	10.0

\*Compliance is based on locational running annual average (LRAA). The highest LRAA for Haloacetic Acids and Total Trihalomethanes is highlighted yellow.

## System Disinfection Parameters

	Regulatory Requirements		2014 Detections	
Chlorine (Disinfectant)	MRDLG	MRDL	Chloramine Levels	
	< 4.0 ppm	4.0 ppm	Average	Maximum
			1.3	1.7
Total Coliform	MCLG	MCL	Total Coliform Detections	
	0 (zero) detections	Presence of coliform bacteria in more than 5% of monthly samples	0 (zero) samples were found positive for coliform bacteria in 2014.	

# WILLOWCHASE

## 2014 Sample Results

### Inorganic Contaminant Results

Contaminant (units)	Regulatory Requirements		2014 Detections		
	MCLG	MCL	Min	Avg	Max

Barium (ppm) 2011 <sup>(1)</sup>	2	2	0.24	0.27	0.30
Selenium (ppb) 2011 <sup>(1)</sup>	50	50	3.2	4.5	5.8
Fluoride (ppm)	4	4	0.12		
Nitrate (ppm)	10	10	0.20	0.21	0.23
Lead (ppb)	0	AL = 90% below 15 ppb	90% below 1.8 ppb No sample above 15 ppb		
Copper (ppm)	1.3	AL = 90% below 1.3 ppm	90% below 0.17 ppm No sample above 1.3 ppm		

### Radiological Contaminant Results

Gross Alpha (pCi/L) 2012 <sup>(1)</sup>	0	15	4.9
---	---	----	-----

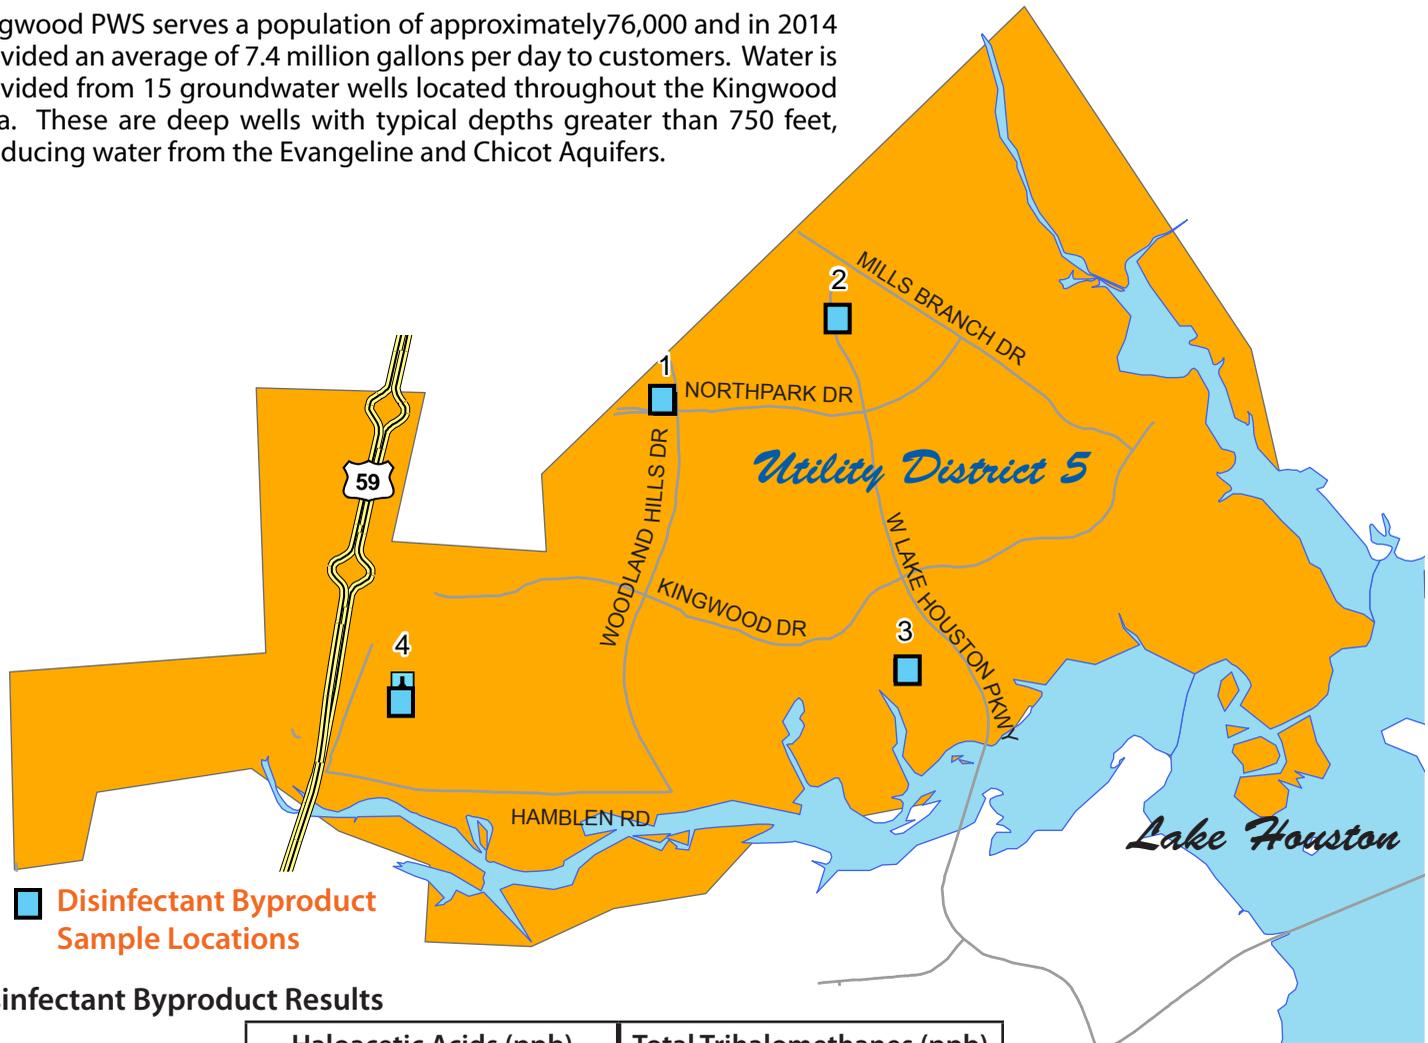

(1) Detected contaminants within the past five years - subject to reduced monitoring requirements.

(2) While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

# KINGWOOD (UTILITY DISTRICT 5)

Public Water System ID 1010348

Kingwood PWS serves a population of approximately 76,000 and in 2014 provided an average of 7.4 million gallons per day to customers. Water is provided from 15 groundwater wells located throughout the Kingwood area. These are deep wells with typical depths greater than 750 feet, producing water from the Evangeline and Chicot Aquifers.

## Disinfectant Byproduct Results

Haloacetic Acids (ppb)	Total Trihalomethanes (ppb)
MCL*: 60 ppb	MCL*: 80 ppb

Sample Location	Min	Avg	Max	Min	Avg	Max
1	ND	ND	ND	ND	ND	ND
2	1.8	2.3	2.9	3.5	7.4	13.1
3	ND	ND	ND	ND	ND	ND
4	ND	ND	ND	ND	ND	ND

\*Compliance is based on locational running annual average (LRAA). The highest LRAA for Haloacetic Acids and Total Trihalomethanes is highlighted yellow.

## System Disinfection Parameters

	Regulatory Requirements		2014 Detections	
Chlorine (Disinfectant)	MRDLG	MRDL	Chloramine Levels	
	< 4.0 ppm	4.0 ppm	Average	Maximum
			1.3	2.4
Total Coliform*	MCLG	MCL	Total Coliform Detections	
	0 (zero) detections	Presence of coliform bacteria in more than 5% of monthly samples	Highest Monthly Percentage of positive samples: 2.0%	

\*Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present. When coliform is detected the system is required to follow-up with additional sampling to confirm the integrity of the water or determine if there is a problem. All follow-up samples indicated that the water was safe and free of coliform.

Regulatory Requirements	2014 Detections
-------------------------	-----------------

**Inorganic Contaminant Results**

Contaminant (units)	MCLG	MCL	Min	Avg	Max
Arsenic (ppb) <sup>(1)</sup>	0	10	ND	1.4	2.6
Barium (ppm)	2	2	0.26	0.27	0.28
Fluoride (ppm)	4	4	0.1	0.3	0.5
Nitrate (ppm)	10	10	ND	0.010	0.05
Lead (ppb) <sup>(2)</sup>	0	AL = 90% below 15 ppb	all lead samples were non-detect in 2014		
Copper (ppm) <sup>(2)</sup>	1.3	AL = 90% below 1.3 ppm	95% below 0.029 ppm No sample above 1.3 ppm		

**Radiological Contaminant Results**

Gross Alpha (pCi/L)	0	15	2.5	2.7	2.8
Uranium (ppb)	0	30	ND	0.8	1.5

(1) Arsenic - While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

(2) In 2014 The Kingwood System completed required sampling for lead and copper analysis, allowing the system to return to compliance with the Texas Commission on Environmental Quality (TCEQ) Lead and Copper Monitoring requirements. Thirty samples were collected for lead and copper in September 2014. No lead was detected in any of the samples. Copper detections met Federal and TCEQ standards for drinking water.

In February 2014, the Kingwood System notified customers of a Lead and Copper Monitoring violation for failure to collect the required number of samples for lead and copper analysis in 2012 and 2013. The violation was for failure to meet the sample schedule set by the TCEQ, and was not related to the level of lead and copper detected in the drinking water. The system returned to compliance when the required samples were collected in September 2014 and all results met Federal and TCEQ standards.

**Unregulated Contaminants**

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. Any unregulated contaminants detected in 2014 are reported in the table below. For additional information and data visit <http://water.epa.gov/lawsregs/rulesregs/sdwa/ucmr> or call the Safe Drinking Water Hotline at (800) 426-4791.

**Unregulated Contaminants**

Contaminant (Units)	Min	Avg	Max
Chromium (µg/L)	0	0	1.2
Molybdenum (µg/L)	0	1.9	4.4
Strontium (µg/L)	0	191	350
Vanadium (µg/L)	0	0.5	2.1

# DISTRICT 82

Public Water System ID 1011593

District 82 produced an average of 40 thousand gallons of water per day in 2014. This system provides for approximately 550 people and relies solely on groundwater from the Evangeline aquifer through 2 wells located in the area.

## System Disinfection Parameters

	Regulatory Requirements		2014 Detections

---	---	----	-----	--	--

(1) Detected contaminants within the past five years - subject to reduced monitoring requirements.

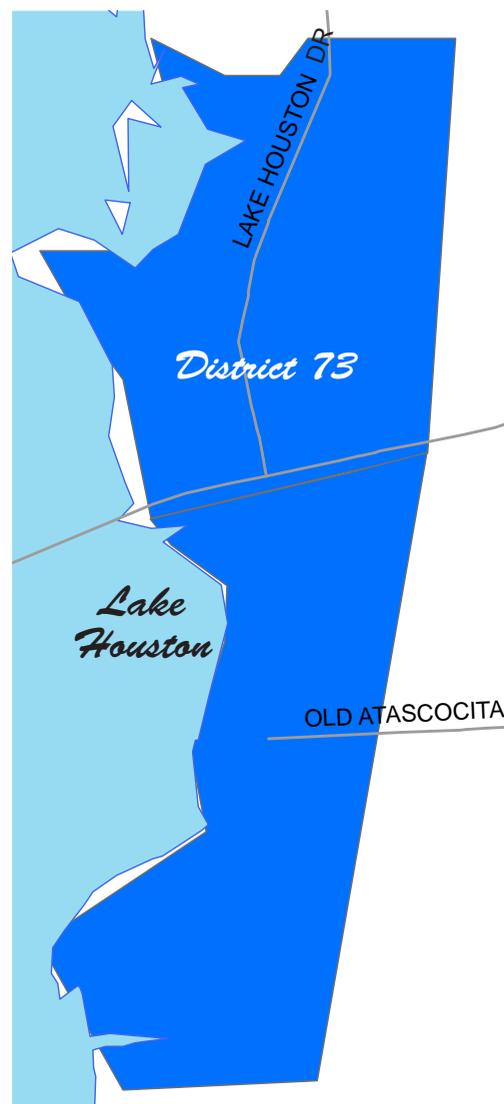

# DISTRICT 73

Public Water System ID 1011593

District 73 serves approximately 4,000 people, and provided 330 thousand gallons per day to customers, on average, in 2014. Tis system receives its water from 4 groundwater wells located throughout the area. These are deep wells with typical depths greater than 750 feet, producing water from the Evangeline and Chicot aquifers.

## System Disinfection Parameters

	Regulatory Requirements		2014 Detections	
Chlorine (Disinfectant)	<b>MRDLG</b>	<b>MRDL</b>	<b>Chloramine Levels</b>	
	< 4.0 ppm	4.0 ppm	Average	Maximum
			1.1	1.8
Total Coliform	<b>MCLG</b>	<b>MCL</b>	<b>Total Coliform Detections</b>	
	0 (zero) detections	Presence of coliform bacteria in more than one sample per month	0 (zero) samples were found positive for coliform bacteria in 2014.	

## Radiological Contaminant Results

Gross Alpha (pCi/L)	0	15	6.5
Combined Radium (pCi/L)	0	5	0.53
Combined Uranium (ppb)	0	30	3.5

## Inorganic Contaminant Results

Contaminant (units)	MCLG	MCL	Min	Avg	Max
Arsenic (ppb) <sup>(1)</sup>	0	10	2.6		
Barium (ppm)	2	2	0.3		
Fluoride (ppm)	4	4	0.16	0.17	0.17
Nitrate (ppm)	10	10	ND	0.02	0.03
Lead (ppb)	0	AL = 90% below 15 ppb	90% below 3.3 ppb No sample above 15 ppb		
Copper (ppm)	1.3	AL = 90% below 1.3 ppm	90% below 0.18 ppm No sample above 1.3 ppm		

(1) Arsenic - While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

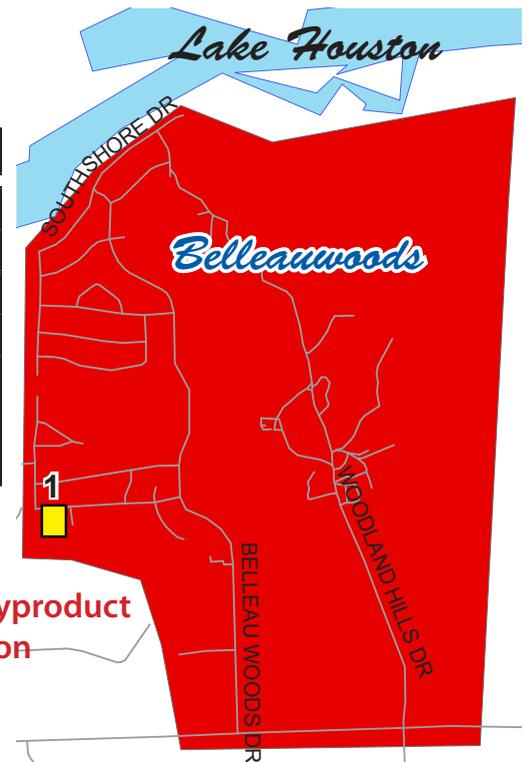

# BELLEAUWOODS

Public Water System ID 1011594

The Belleauwoods water system serves approximately 800 people and provided an average of 240 thousand gallons per day to customers in 2014. Source water for Belleauwoods includes purchased water from the City of Humble and groundwater from 2 wells located in the area. These are deep wells with typical depths greater than 750 feet, producing water from the Evangeline aquifer.

## System Disinfection Parameters

	Regulatory Requirements		2014 Detections	
Chlorine (Disinfectant)	<b>MRDLG</b>	<b>MRDL</b>	<b>Chloramine Levels</b>	
	< 4.0 ppm	4.0 ppm	Average 1.1	Maximum 3.5
Total Coliform	<b>MCLG</b>	<b>MCL</b>	<b>Total Coliform Detections</b>	
	0 (zero) detections	Presence of coliform bacteria in more than one sample per month	1 sample was found positive for coliform bacteria in 2014.

	Min	Avg	Max	Min	Avg	Max
1	ND	8	20	5	10	21

\*Compliance is based on locational running annual average (LRAA). The highest LRAA for Haloacetic Acids and Total Trihalomethanes is highlighted yellow.

## Inorganic Contaminant Results

Contaminant (units)	Regulatory Requirements		2014 Detections		
	MCLG	MCL	Min	Avg	Max
Barium (ppm) 2012 <sup>(1)</sup>	2	2	0.4		
Fluoride (ppm)	4	4	0.2		
Nitrate (ppm)	10	10	0.4	0.5	0.7
Selenium (ppb) 2012 <sup>(1)</sup>	50	50	3.5		
Lead (ppb) 2009 <sup>(1)</sup>	0	AL = 90% below 15 ppb	90% below 1.3 ppb No sample above 15 ppb		
Copper (ppm) 2009 <sup>(1)</sup>	1.3	AL = 90% below 1.3 ppm	90% below 0.16 ppm No sample above 1.3 ppm		

## Volatile Organic Contaminant Results

Contaminant (units)	MCLG	MCL	Detections
Ethylbenzene (ppb)	700	700	0.9
Toluene (ppm)	1	1	0.6
Xylenes (ppm)	10	10	3.8

(1) Detected contaminants within the past five years - subject to reduced monitoring requirements.

# CONTAMINANT SOURCES

CONTAMINANT	SOURCES
Arsenic	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes.
Asbestos	Erosion of natural deposits; corrosion of asbestos-cement water lines.
Atrazine	Runoff from herbicide used on row crops.
Barium	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Chlorine and Chloramines	Water additives used to control microbes.
Combined Radium	Erosion of natural deposits.
Combined Uranium	Erosion of natural deposits.
Copper	Corrosion of household plumbing systems; Erosion of natural deposits.
Ethylbenzene	Discharge from petroleum refineries.
Fluoride	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Gross Alpha	Erosion of natural deposits.
Gross Beta	Decay of natural and man-made deposits.

CONTAMINANT	SOURCES
Hexachlorocyclopentadiene (HEX)	Discharge from chemical factories manufacturing pesticides, flame retardants, resins, dyes, pharmaceuticals, plastics, etc.
Lead	Corrosion of household plumbing systems; Erosion of natural deposits.
Nitrate / Nitrate	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Selenium	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines.
Simazine	Herbicide runoff.
Toluene	Discharge from petroleum, plastics, paint, and pharmaceutical manufacturing.
Total Haloacetic Acids (HAAs)	By-product of drinking water disinfection.
Total Trihalomethanes (TTHMs)	By-product of drinking water disinfection.
Total Coliform	Naturally present in the environment.
Turbidity	Soil runoff.
Xylenes	Discharge from petroleum factories; Discharge from chemical factories.

## Special Information on Lead in Drinking Water:

Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Houston is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at [www.epa.gov/safewater/lead](http://www.epa.gov/safewater/lead).

The EPA has set limits for drinking water quality based on scientific studies and calculated risks.

For more information regarding the EPA limits, please visit:

<http://water.epa.gov/lawsregs/rulesregs/sdwa/currentregulations.cfm>.

For more information on EPA calculated risks and scientific studies visit:

<http://water.epa.gov/scitech/drinkingwater/dws/ccl/index.cfm>.

### Public Participation Opportunities

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.
