Consistency Certification (CC) Checklist

Once the administrative review is deemed complete, the public notice and technical review period begins. To ensure all information is provided and to avoid a possible delay of the consistency review for a CC, non-federal applicants may use the CC checklist listed below as a guide for submitting consistency review requests to the GLO.

Consistency Certification Checklist
All material relevant to the CMP's provided to the Federal agency in support of the application (which may include a list identifying all federal, state, and local permits or authorizations subject to the CMP and required for the proposed activity and its associated facilities)
A detailed description of the proposed activity and its associated facilities with enough information to adequately permit an assessment of the probable effects on CNRAs and coastal effects)
Any other information relied upon by the applicant to make its consistency certification.
Maps, diagrams, and technical data that includes mitigation plan if required
An alternative analysis
Habitat characterization
Any required surveys for the license or permit
detailed information shall be submitted when a written description alone will not adequately describe the proposal
A brief set of findings with an explanation on how their effects are consistent with Texas CMP goals and enforceable policies
Signed GLO CMP Consistency Form or equivalent documentation with signature.
On the SIGNED CMP consistency form, the following statement affirming "The proposed activity complies with the enforceable policies of Texas' approved coastal management program and will be conducted in a manner consistent with such program".
A CC is deemed administratively complete once the GLO receives a complete consistency certification that is in conformance with 15 CFR §930.57 and includes the necessary data and information described in 15 CFR §930.58 and §30.30(b)(1), (2), (3), and (4).
