ABOUT THE REPORT
ABOUT THE REPORT

Statement of Purpose
Evaluation reports have been prepared in accordance with the Texas Natural Resources Code, Sections 31.157, et seq. This legislation requires that the Asset Management Program Area of the Texas General Land Office (GLO) identify and evaluate designated state-owned real property and accomplish the following:

■ identify real property not being used or being substantially underused, and

■ determine current market value, for properties recommended for disposition

Appraisal Process
Appraisals are performed by GLO staff or outside third party fee appraisers, whose findings are contained in reports on file in the Agency's Appraisal Division. Field staff measure and examine buildings to determine structure, composition, and condition. The resulting data is processed using the Marshall and Swift Valuation Service to derive replacement and depreciation values. Using the Market Data approach, area markets are examined, and the current market value of the land is determined.

House Bill 957 of the 79th Legislature requires a value determination for all properties recommended for disposition. If a property is not recommended for disposition, a value determination shall be in a form deemed appropriate by the Commissioner. As such, properties recommended for disposition shall be the subject of a full appraisal while properties not recommended for disposition shall be the subject of an inspection and utilization analysis.

All findings are based on market data and conditions as of the appraisal date. Appraisers do not make forecasts of future market trends not already indicated by current real estate activity.

Evaluation Process

Analysis

The GLO analysis staff reviews appraisal findings and performs additional research to determine the following:

■ pattern of land utilization for each facility

♦ land that is economically underutilized

♦ land not being used for agency or facility functions

■ development potential for underutilized/unused property

This analysis should be viewed as a preliminary feasibility study which identifies potential alternate uses. Additional research would be necessary prior to marketing the property to insure accurate forecasts of land use, income streams, transaction costs and implementation scenarios.
Evaluation Process

Definition of Terms

Evaluation reports may employ the terms defined below.

Market Value -

The amount one can expect to receive if the property were sold on the open market, and the highest price which a property will bring if offered for sale in the open market, with reasonable time allowed to find a knowledgeable buyer and assuming reasonable financing terms. This definition implies the concept of a willing buyer and seller, neither of whom is put under undue duress and both having been given time to consummate the sale.

As a result of rounding, market value is not expressed as the sum of land, improvements, and site improvements that are reported.

Highest and Best Use -

The most profitable, likely, legal use to which a property can be placed. It is that which may be reasonably expected to produce the greatest net return and/or enjoyment over a given period of time.

Floor-to-Area Ratio (FAR) -

A measure of development intensity used to judge relative land utilization. FAR is the ratio of built gross floor area compared to the gross site area. This factor is a useful index of economic efficiency when compared with typical FARs for given categories of use.

Grade -

The horizontal elevation of a finished surface of the terrain from where a height will be measured.

Lot -

A parcel with a separate number or other designation as shown on a plat.
