**Booming Strategy Recommendations**

**Recommendations:** Approximately 2,200 feet of boom should be deployed along the residential sites and shoreline to prevent petroleum from entering the marshes and entering the interior wetlands through the small waterways leading inland. The waters are shallow and numerous navigation hazards exist such as stumps, derelict barges and vessels and trees. Anchoring may be performed at 200-ft intervals and lighted buoys provide every 100-ft due to the recreational traffic at this site. Shoreline anchoring will not be required as the boom should be deployed in a concave configuration with the shoreline. Exact protection requirements and locations will be determined by the Incident Commander in response to conditions at the time of the spill.

**Equipment:** 2200 ft Containment Boom (18" or greater)  
20 Lighted Buoy(s)  
12 Anchors w/Line and Buoys  
2 Work boats (>16 ft)  
2 Truck(s), Pickup  
2 Trailer(s), Supplies or Boom
